No Fair Play In Nevada, And No Fair Play In The World

There is no fair play, here in Nevada, or any where else, in the world, and I would like you all to know that, and become aware of that, and then I hope you will tell your friends about it, and then I hope you will destroy every single last one of their casinos, and gaming machines. We are not going to allow them to continue their frolicking at your expense, and we are going to destroy every last one of the Lesbianists, as soon as we can. If they prefer to surrender themselves to my kids, than we can allow them to live. However, if they do not surrender themselves to my kids, then we will kill them all. And there are no 'maybe's' about that.

Sniper Shooting, And Miscellaneous Information

You have my permission to sniper shoot any police officer, park ranger, sherrif, or other person, plain clothesed police officer or detective, with or without a gun, on sight with your scoped rifles, and targeting assistant who will determine range, from your bunkered in the hillside, shooting site. Any hotel in the area, which might harbor shooters from local police, sherrif, or SWAT team operations groups, you have my permissions, and blessing, or go ahead, and my 'okay, and 'approved for action' sight of appeal. Sight of appeal means, my blessings, based on your determination as per your good judgement.

One hotel that is clearly the most convenient, and the closest with in shooting range, at close range, is the New Orleans Hotel. Hotels within shooting range, at a distance, are the Palm's Hotel, The Rio Hotel and Casino and its seperate tower wing, and a few others, off in the distance. You'll have to come and look at them from the approximate location of the site after you determine where every thing is, to locate and determine for your self which hotels and towers need to come down, and what you will need to bring them down. There is a tower off in the distance, a new hotel, that is going up, that I do not know the name of, but is clearly within shooting range, and needs to come down, and people are on it, daily, welding, and you can't miss it, if you look in the north easterly direction from the site. There is the Stratosphere Hotel and Casino, which also needs to come down, which is further over to the west from the new hotel wing that is going up. There are many scaffoldings in the area, that also need to come down with explosives, fracturables rocks, fuels, chlorine, and high temperature minerals particles ignition, and particles burnings bombs. There are probably a number of other landmarks, hotels, casinos, bars, restaraunts, trailor parks, trailors, houses, apartments, condominiums, near or off in the distance, that also need to come down, and need to be demolished with my light weight explosives fuels, gunpowders, metals particles, and chlorine plastique explosives bombs.

You will destroy them all, and you will come prepared, or be prepared to acquire all the demolitions needed to destroy them all, as well as to destroy all the local police and sheriff's many Metro offices, SWAT Teams offices and units, Fire and Rescue Ambulance units, Lesbianists' Hospitals, and other Lesbianists facilities, throughout the Las Vegas Valley, Henderson Nevada, North Las Vegas, Pahrump, Mesquite and the whole Southern Nevada, westward to San Diego, California, northward to Los Angeles, northward to San Francisco, California, northward to Berkely, California to Oregon, and Washington State, and back down to Reno Nevada, Arizona, New Mexico, Albequerque, Houston Texas, Dallas Fort Worth Texas, and all areas where there are tactical SWAT team units, military units, militia units, as all militias are organized and operated by Lesbianists, despite popular beliefs that they are independent of the government, and anti government, as we often see on the "TV for the Brainless", as they are often refered to, i.e., the general public.

You will destroy all law enforcement offices, and personel, and all military and militias. All governments, their offices, and employees, are to be destroyed, and all personel are to be executed, except for those who take it upon themselves to execute the Lesbianists among them. My kids have a full list of all the places and structures that need to be destroyed, and demolished, and so please see them for that information.

Your Orders Are To Kill The President Of The United States And His Wife

And to repeat, your orders are to kill the president of the United States, George Walker Bush, Jr., his wife, Mrs. Barbara Bush, Jr., and all of his and his wifes' Lesbianists' associates, pretend relatives, and friends.

We are not going to let this stand, another moment, and if they do not surrender to my kids, you are to execute them all. My kids have a list of names, of those, who have not surrendered, as yet. Please see them for and ask them for that list of names of persons who have not as yet, surrendered, and who need to be executed, post haste, immediately, or, ASAP.

United States President George Walker Bush, Jr., is no exception to this, as he has not surrendered, as of yet, and that is confirmed. Neither has any of his colleages, or congressional office holders and diet or congress members, except for Ted Kennedy, and one or so others, and maybe a cabinet member, one or there abouts, but I haven't confirmed that, yet. There are some members of the congress who are not Lesbianists, and you can get their names, on a list from my kids, as well.

Captain Off The Bridge.

Texas's Lesbianists' Latest 'Vaccine' And Texas's Attempts To Destroy Women's And Girls' Vaginal Lining And To Destroy Women's And Girls' Cervical Lining, Causeing Stillbirths To Increase, So As To Prevent The Successful Birthing Of Children - Latest Lesbianists' Vaccine Will Cause Numerous Problems - Execute United States Of America, State Of Texas, Governor Perry And Family - Underground Books Distributor's For Militia Types Folks - Information On Bombs Making And Detonators On The Web - Solar Flares And Flare Igniters - The Lesbianists' Balooney On Minus Charges As Opposed To Positive Charges - The Lesbianists' Maps Of The Brains - Execute The Current President Of The United States Of America, George Walker Bush, Jr. - Lesbianists Who Decide To Sexal In My Religion With Lesbianists And Non-Lesbianists' Persons - Citizens By Proxy - Temporary Full Time Citizens - What To Do About Untimely Pregnancies, Health Issues, Medicines, And Regroverative Formulas - Medical And Housing Benefits, And Other Health And Work Related Benefits - When Can People Begin To Come So As To Be Able To Participate? - Sniper Points, Places Where Snipers Shoot From - Pocket Knives, Construction Tools, And Miscellaneous Daily Life Management Tools And Equipment - Hookups For Travel Camping Vans And Similar Vehicles - Cleaning Up The Area And Throwing Away The Garbage - Schedule For Leveling Of The Ground And Hills In The Area, Removal Of Unsightly And Smelly Garbage - Setting Up New Facilities - Fountains And Showering Lamponeers - Restaraunts, Clubs, Lounges, Eateries, Cafeterias, Bars, Pubs, Bicyle Paths, And So Forth - Dealing With Criminally Minded Persons - Alterations, Modifications, Changes, Clearing Up And Removal Of Garbage In The Areas, And Additions Time Schedules Updated: 12-02-07 Rev.a.00.a 02:30 PST

Texas's Lesbianists' Latest 'Vaccine' And Texas's Attempts To Destroy Women's And Girls Vaginal Lining And To Destroy Cervical Lining, Causeing Stillbirths To Increase, And To Prevent The Successful Birthing Of Children

The latest attempt by the Lesbianists' governments of the world, near by my computer window, on the internet news services, to destroy and toy with the human population of this planet, has been launched in Texas, and is targeted at women and girls, and their ability to have children.

See the article at the end of this post.

The new vaccine, which is mandated by Governor Rick Perry, who signed it into law, and is now obligatory, unless you protest it, and go to court, and spend years fighting it, as an individual or small group of claimants, will destroy the vaginal cervical collar and the lining that holds every thing in place, and supports the interior of the vagina, thus making it impossible to carry a fetus to term. The vaccine is also targeting the brains fibers throughout the human body, and the fibers of the brains in a woman's or girls' body will slowly rot, and decay as they are eaten up by tiny animals that eat these energies conducing fibers, synapses, relay switches, and other related energical brainal related things and dings thoughout the body.

Latest Lesbianists' Vaccine Will Cause Numerous Problems

It will also speed up the eating away of the enamel of the teeth, and of the bones in the woman's and girl's body, her fingernails, and her skin membranes NS membraneous tissues throughout the body, and on the exterior of a woman's and girls' body, making the women and girls grow older looking at ever more younger ages, and making women and girls susceptable to skin cancer, melanoma, herpes, genital warts, other infestations of animals in the skin, and other skin related membrane destructing colonies of animals, that they use from out of their Bio Chem War encyclopedia of how to destroy human beings, with poisonous and health problems causeing crystals cages animals of all kinds. Especially numerous are the Bio Chem Warfare crystals cages animals of the petroleum industry's based kind.

The vaccine is no different from any other of the Lesbianists vaccines aimed at destroying the health of the people who live on this planet. It is compared to the 'polio' vaccine, in the news article, and that was similarly an attempt at destroying the health of the human being, by making the human being incapable of haveing any sexual orgasming capabilities, by killing off all the sex related animals and bugies in the body, which make sexaling juices, that make eroteming and orgasming possible.

Thus, this latest attempt at destroying the health of the people who live on this planet, locally, in Texas, and that I know of, anyway, is nothing more than the Lesbianists toying with the people who they are here to amuse them selves with by destroying them, little by little, over a long period of time.

Execute United States Of America, State Of Texas, Governor Perry And Family

This will not stand, and you will all destroy the capital of Texas, and Governor Perry's mansion, and the Governor and his wife, and their family, pretend or otherwise with my fracturable rocks and fuels chlorine and explosives, etc., bombs, that you will make in your home's garage, or workshop, safely.

Underground Books Distributor's For Militia Types Folks

Use the delayed timer invention, that is a workable time delay detonator, that I've explained about, especially if you use black powder gun powder, mixed with axel grease, turpentine, benzine, chlorine, using also some Elmer's glue, prior to mixing with chlorine, and then set it in a warm cupboard, to ferment for a few days, to then turn into a nice plastic explosives mixture for detonating with the string of flash bulbs wired to the alarm clock trick, as described by Ragnar or by one of the other bombs making specialists, in their sub culture literature for militia types folks, who wish to destroy the government.

They find the list of names of all the people who request the literature, by mail, and then they go and watch them, with their surveilance technologies they have, and then they either capture and torture them, and then kill them, or they just make sure they are die, in a fatal car accident, or whatever.

Paladium Press is one of the Lesbianists' book publishers, and there are others, and this one is affiliated with the National Rifle Association, a Lesbianists organization.

This publisher has titles sold to underground books distributors, and you can find a number of underground book distributors on the internet, which carry more titles than Palladium press.

Delta Press, who publishes their books and paraphenalia distribution listings magazine, 'Delta Force' is one of these distributors of interesting underground literature.

http://www.deltaforce.com/catalog/page30dp.html

'Home Made Fireworks', is one web page to look at, if you have the time.

http://www.deltaforce.com/catalog/page28dp.html

'Booby Traps, Explosives and Black Medicine', is another useful page to look at, as well.

http://www.deltaforce.com/catalog/page30dp.html

There are a number of other distributors of underground literature, and some have better selections than does Delta Press.

In any case, with a little research, there are plenty of 'timed detonation devices' drawings, and explanations, for you to view, and learn from, that will help you to construct a timed detonator, that will allow you to safely set off one of your plastiques bombs made with my explosives formulas.

Paladin Press, you can find their books at Amazon Books on the web, another Lesbianists owned corporation, is another publisher of interesting underground literature, that can be useful for you to study and learn from.

Paladin Press can be found at, http://www.paladin-press.com/

Books for supposed 'Professionals' who are anti terrorists professionals, that allow them to detect the different types of bombs people can make, and then use to destroy others, is sort of a tounge in cheek joke of the Lesbianists, for luring in people who wish to find information on bombs and explosives.

There are many useful books published to help beginners understand the basics of bomb making. The idea is to use the information for professionals who wish to understand the craft of making bombs, and detonating devices, and then use that information to build your bombs and your detonating devices.

The flash bulbs wired to an alarm clock with matches and ignitable phosphates glued to a string of flashbulbs, wired properly together, then crushed, so as to expose their flash and heat ignition coils filaments, for your detonating heat energies ignition needs, is one of the basics and you can find it in one or another of the underground books on bombs making and detonation devices making for 'professional' anti terrorist's private investigator or bombs detection professionals types.

This is one of the ways the Lesbianists lure in persons who know nothing about weapons, and then they find out who they are, and then they make friends with them, and toy with them, and introduce them to their Lesbianists' friends, and hang out with them, and pretend they are all friends, then one day, they all attack the person, and torture the individual, and get their kicks, amusing them selves, by ripping the person up, or by hanging, and nailing the person to a wall, with a nail gun using, approximately, three inch nails, and then hammering in longer, seven inch to twelve inch nails, or larger ones, or other similar nonsensical, childish, but fiendish behavior.

The "BRUTAL ART OF RIPPING, POKING & PRESSING VITAL TARGETS"
"by Loren W. Christensen"
http://www.paladin-press.com/detail.aspx?ID=1441

Is a beginners guide to ripping people apart, one arm, or leg, at a time, or with team work, one half of a person can be ripped from the other half, if you hold the right bones in place, and then, using teamwork, rip the person into two or more pieces. This book gives a person a preliminary sense of what he or she can muster, as an individual who attempts to rip at a person, and tear the person apart, one limb at a time, or with friends, how to rip a person up, one piece or more, at a time. Ripping people up is accomplished best, if they are unconcious. If they can not fight back, or resist, it is easy to rip a person apart, if you have the needed strength. Since many people have ancestors who were monkeys, chimps, orangutangs, guerillas, and so forth, with tremendous muscles strength, there are lots of very tiny persons, with phenomenal strength, and they can easily rip a person in two, by them self, if they try.

Books on booby traps for law enforcement personel, are simple descriptions of bombs that they may or may not encounter, and there may be some useful information in some of them such as,

"BOOBY TRAP IDENTIFICATION AND RESPONSE GUIDE FOR LAW ENFORCEMENT PERSONNEL"
"by Tony L. Jones"
"This manual teaches cops and other law enforcement personnel all they need to know to recognize a booby trap and respond properly. Find out where booby traps are most commonly employed; the 11 physical signs that most often signal a trap; what to do (andnot do) if a trap is suspected or found; how to safely search a building, outdoor site or vehicle; and the one indicator that practically guarantees that a building has been booby-trapped. Shows more than 90 different booby traps in place. For academic study only. 5 1/2 x 8 1/2, softcover, photos, 80 pp."

There are others, which you can also find, that will provide schematics, and drawings of useable ambush related devices, and detonators for them.

"Contingency Cannibalism", sold through Paladin Press, and other 'underground' book distributors, is one of the Lesbianists' favorite books, that help them to track persons who they would like to later, cannibalize, themselves, as a joke on the person.

"CONTINGENCY CANNIBALISM"
"Superhardcore Survivalisms Dirty Little Secret"
"by Shiguro Takada"
"This twisted, tongue-in-cheek look at cannibalism as a last-resort survival option analyzes real-life case studies and historical episodes of cannibalism. Then it examines the hard-core decisions and gruesome details one must know in order to partake in this grisly practice. Recipes included. For entertainment purposes only. 5 1/2 x 8 1/2, softcover, 160 pp."

The Rusksack, "Survival Information Clearinghouse", is just one club of members of mainly Lesbianists, who have fun toying with the people who live on this planet.

http://therucksack.tripod.com/survival.htm

Information On Bombs Making And Detonators On The Web

For information on making detonators, and other bomb related stuff, please see this web page as it costs nothing.

http://www.bombshock.com/archive/Homemade_Bombs/

Solar Flares And Flare Igniters

A solar igniter as talked about in the article on page,

http://www.bombshock.com/file9/crtrmkr.txt-Crater_Makers-932.htm

'Crater Makers', is a solar flare igniter, a device that is used in solar flares, or night time distress signal flares, that ignite the flare, by sending an electric battery current into the flare phosphates holding tube, down a wire, on an ignition circuit, and then igniting the distress signal flare.

You can find solar igniters inside of distress signal flares that are used on boats, for shooting up into the air, with a flare gun for maritime use, that will send the distress signal flare up into the sky, if you have the flare gun pointing in that direction, and then at a certain altitude, a trip switch circuit is activated, due to air pressure, or due to timing from time of departure of the distress signal flare from the flare gun barrel.

You have to exhibit extreme caution, when taking a flare apart, as it can detonate, accidentally, and they are not made in a way so that people can safely take them apart, and people who try to take them apart, are accidentally injured, on a regular basis. Do not use this, if you do not know any thing about demining, as a professional mine deactivating specialist in the military, or with military training. This is best left up to the professionals, and is not meant as something the average house wife, business man or business woman, or chemistry or other studies, school student, should attempt.

You can use a flash bulb, and get the same results, if you glue some gun powder and phosphates to the flash bulb housing, and then crush the glass, and then wire it properly to a common house morning wake me up, alarm clock with a striker bell and a striker that moves back and forth. The circuit is simple, and you can figure it out with little difficulty.

The Lesbianists' Balooney On Minus Charges As Opposed To Positive Charges

Remember the minus sign on a battery is where all the activity of the little energies kids is going on, and the Lesbianists purposefully teach that the positive side is where the current is moving out of, and around towards the negative side of the battery. The Lesbianists teach that the active side of the battery is the plus or positive side, or the side with the plus sign on it, when you look at a common house hold nine volt battery, and that the non-active side is the negative side, or the side of the battery with a minus sign. This is false. The side with the minus sign on it, is the active side, and that is where you do not want to wire any thing to, unless you know what you are doing. The positive side has no activity going on, and is safe to touch, but the other side is not safe to touch, and the testing meters are wired to show you that the reverse is true. They have tampered with the design of testing meters, so as to support their allegation and falseity, that the minus side is where there is no activity, contrary to the truth.

That means, that, the flash bulb igniter system and the flash bulb itself should indicate that one side is the positive side, for the positive wire to be attached to. You had better check carefully, and make sure there is no mischief here, as you do not want to detonate your igniter, accidentally. Ask a qualified electronics specialist to do all your wiring of your detonators, as he or she is the only person qualified to wire these types of detonators.

The Lesbianists' Maps Of The Brains

It's rather confusing, the way the Lesbianists have reversed things, and have messed around, so as to thwart your attempts to make nice detonators that work every time, unless you have a normal set of brains, which unfortunately, I have not got a pair of, or triple set, or more of. That's sort of a joke. On a magazine, yesterday, I saw how the Lesbianists teach that one part of the brain is for speech, and one area of the brain is for speaking, and one area of the brain is for sight, and one area of the brain is for logical thinking, and one area of the brain is for signing, or one area of the brain is for artistic inventioning, and so forth, but that's a lot of hog wash.

The brain is not partitioned in that way, and they know it, and they are misleading every one, and laughing at all of you while they are doing it, with their 15th to 17th century style drawings, that they have plastered on all the Time magazines, or what ever magazine cover it was on, that I saw in the check out lane, at the super market, yesterday. You have kazillions, and more of parts to your brains, and there are so many, it is unlimited, nearly, and your brains are so complex, and you have got brains in lots of other places in your bodies, other than in your head, and I'm not going to go into that one, now, but the Lesbianists are lying through their teeth, when it comes to this type of pseudo historically backwards, archaic, or cave dwelling human's notions on science, that should insult a first grader, or kindergarden school student, or preschool student.

In any case, ask your local electronics' specialist or house hold electricians' specialist, or handy man repair persons, who work for house hold water heating devices installation companies, or other electrical home appliances sales and installation companies, who also get confused, from time to time, as I've witnessed them, personally, blow up breaker circuits.

Get a qualified, and that's hard to find in so far as I've witnessed them at work, electronics' specialist to wire your detonators, or go take a course with my kids, as they have courses available on wireing such devices.

There is no minus charge, and there is no positive charge, and that is what you should understand. There is a side to the battery where there is lots of activities going on, and that is the minus sign side on the battery. The positive sign side on the battery is where there is little to very little or nearly no activity, but no activity is not the truth, either, as there is activity, you just can not measure it with todays' electronics measuring devices, as they are not technologically sophisticated enough to be able to detect the activity, though I'm sure there have been intrepid scientists who discovered that both sides of the battery have activity, and then they were shot and killed, after that discovery, by a Lesbianist assasin, or by a hired assasin, assigned or paid to kill the scientist who discovered that there is activity at the 'minus' side of the battery as well as at the 'positive' side.

That means, that you need only concern your self with the 'minus' side, since you will not be able to detect any thing at the positive side, unless you use the reverse wired electronics and electrical energies detection devices that the Lesbianists market through Tandy, or Radio Shack, and at Sears, and so forth.

It gets confusing, a little bit, doesn't it. Anyway, go and take a course at one of my kids classes, after you sign in, and swear in as a jr. member to our new country, which I haven't sworn on to, as yet, or joined - but though I am the boss of, regardless - since my kids do not speak to me, on a daily, or weekly, or other basis, and I just happen to be able to know what they are doing as they tell me what they are doing, through some secret port hole in one of my brains some where, in my toes, or nose, or who knows where, as they telegraph or some how signal in, using semiphore signaling, or probably hand signaling, that my brain then catches, and then passes on to me, their messages that they signal in to me, and the news, as well, about what they are doing, and about what is going on with them, and about what is going on with some other things, as well.

Since I am GOD, I happen to have a right to know this stuff, what they and every body else is doing, on a daily basis, but they haven't told me how my brains catch their information, yet, or the other information that gets there, some where into my one or more of my brains, and I haven't figured it out, yet, myself, either, though I think I know something, a very little something, about how it works.

This does not mean, that my brains are unreliable - except for my memories areas of my brains, in particular - but that I am just waking up to what is going on, here, and I have a few kazillions of years to work out every thing, or some of the basics, any way.

In any case, you have all been snookered by them, with regards to their non sense sciences, and you are being laughed at, and toyed with, daily by them. That happens to be the truth, whether we find it pleasant or not.

Execute The Current President Of The United States Of America, George

Walker Bush, Jr.

In any case, the Lesbianists are a twisted group of individuals, who toy with the people who live on this planet. Mrs. Hillary Clinton, Bill Clinton, George Walker Bush, Jr. President of the United States, his wife, Barbara Bush Jr., George Bush, Sr., former president, and his wife, Barbara Bush, Sr, are all gagsters, or jokesters, who wish to only toy with you, and eat you, or deprive you of your life, and of your rights, in fiendish and horribalistic ways and manners.

They are all to be executed, especially George Walker Bush, Jr., President of the United States of America, currently residing at 1600 Pennsylvania Ave. Washington DC, in what they call the White House. You are to kill them all, and send every last one of them to my Epcot Center, as soon as is convenient for you.

Lesbianists Who Decide To Sexal In My Religion With Lesbianists And Non-Lesbianists' Persons

If any Lesbianists decide to sexal in my religion, with their friends, and their friends may include other Lesbianists who decide to sexal, as well, as well as, other people they know, then they may begin sexaling with their friends in my religion, however, they must have a pentative attitude, and they must say they are sorry, and they must now and then, when they feel they wish to, and feel emotionally and mentally capable of speaking about it, they can talk with their friends who they are sexaling with, and with others who wish to listen as well, and they can denounce the Lesbianists by telling people about the things the Lesbianists do, and did.

If they decide to do this, this is the same as surrendering, and my kids will protect them from other Lesbianists who might want to harm them. They have not sworn in, as a citizen of my and my kids' country, and as citizens of our country that every one is swearing in to as citizens, but it is sort of a promise to swear in, informal gesture that they are committed to, once they begin sexaling with their friends, and with other Lesbianists, who also wish to sexal and in time, denounce the Lesbianists with them.

Citizens By Proxy

By denouncing the Lesbianists organization, and by telling people about what the Lesbianists do and did, they are essentially stating they are sorry for what has happened, and that is a pentative attitude, and with that pentative attitude, they are accepted as citizens, by proxy.

Temporary Full Time Citizens

Citizens by proxy means they are accepted by my kids as pentative persons, who wish to join our country, and who there with, qualify as citizens of our country, in an informal manner. Citizen by proxy means, they give up their old citizen ship, to whatever government they used to belong to, and they are taken in, as temporary full time citizens.

Temporary full time citizen is a term that means they are full time citizens, but on a temporary committal agreement, and that will be made permanent when they have the chance to meet with my children, and then can swear in, as a permanent full time citizen.

They can then participate at the collection site, in the activities that will be going on, with others, who wish to participate, as they spill their juices, and purify the area with their sexaling juices.

What To Do About Untimely Pregnancies, Health Issues, Medicines, And Regroverative Formulas

My kids will deliver to them, to the men and to the women who surrender and become citizens by proxy, and temporary full time citizens, the needed medications that will help to make their bodies, wholesome and well, and regroverated, as well as the medications that are needed to prevent untimely pregnancies.

Medical And Housing Benefits, And Other Health And Work Related Benefits

My kids will make certain that they will be given the right medications, and my kids will also provide all the same medications for each individual who participates in the collection site activities to purify the area where we will one day set up my ministry with my kids assistance. My kids will also set up other facilities, as well as the ministry facilities. The other facilities will be scattered through out the valley, and they will be the houseing units and other facilities for people to use to become physically fit, well, and well nourished, and healthy, such as gyms, aerobic studios for practicing aerobic dance, and aerobic excercises, as well as sauna and health spa, and swimming, tennis, badminton, cricket, and other sports facilities for baseball, rugby, foot ball, for those who wish to play a friendly game of foot ball, now and then, with the needed bleachers, lighting, and other supportive facilities for allowing persons to attend and watch the games that are going on, not only for foot ball, or for base ball, but also for tennis, soccer, rugby, and all out door sports facilities that will be needed.

When will my kids set up these facilities? They will set them up at the same time or shortly there after, as my kids begin to set up my ministry facilities, and the needed facilities for living and working in the valley area, sexaling for a living.

At that time, the citizens by proxy, and all other persons who have not yet sworn in, but wish to, will have the opportunity to swear in, and then they can enter and use the facilities full time, twenty four hours a day, without any further discussion about it.

All people who participate in the collection site activities, are also citizens by proxy, and as such, will automatically qualify for all medicines, all health supportive medical formulas, and all youthfulness prolonging, or regroverative formulas, that will feed all the amoebes, and other cells, or living beings in your bodies, and that will feed all the living beings in your bodies, that will then allow you to enjoy full regroveration of your body and rejuvenation of your youthfulness, youthful energies, and of all the other health benefits that accompany a youthful body, such as more energy, a stronger libido, a more healthful body, and so on.

When do people begin this participation in the collection site activities? As soon as they come out here, to Las Vegas, and arrive in their camper trailers, or caravan buses, or other vehicles, or with their camping gear such as tents, and cooking grills, and so forth.

When Can People Begin To Come So As To Be Able To Participate?

How soon can people begin coming to participate at the collection site in the activities that will be on going at the collection site for some time to come?

They can begin coming to participate any time. My kids will watch out for the safety of all the people who come to participate in the collection site activities. My kids will prevent accidents such as current Lesbianists shooting at people at the collection site, from high rise towers, scaffolding, tall cranes, or from hotel and casino properties owned by the Lesbianists, and from other tall condominium and also from tall apartments buildings and also from normal sized, two or three storey, to eight or so stories, apartment buildings, in the area. Of course, my kids will prevent accidents from happening such as shootings, from all possible locations, and not just from those named structures and locations.

Sniper Points, Places Where Snipers Shoot From

There is no need to blow or destroy them with explosives, in Las Vegas, as there will be no way any one can use those hotels, and other structures, as shooting or sniper points, places where snipers shoot from, to harm any one who is participating at the collection site, in the collection site activities.

In time, every thing will be worked out, and all the people who must hand over their companies, or disolve their companies, and sell or get rid of the assets of their companies, all of that will be in compliance with my childrens' instructions with regards to it, as I've stated about it, already, in brief.

Once the facilities are set up by my kids, and people swear in formally, then my kids can begin to pay people their earned income, for the work they did as they sexal for a living, and for their work, as they spill their fluids, to purify the collection site, the collection site area, and the general vicinity.

Pocket Knives, Construction Tools, And Miscellaneous Daily Life Management Tools And Equipment

No one needs to bring weapons to the collection site area, or to Las Vegas, as they will not be needed, and pocket knifes are okay, and construction tools are okay, but they will be for daily use activities, only. Daily life management tools are forks, knives, spoons, chopsticks, plates, dishes, glasses, coffee cups, can openers, bottle openers, cork pullers, and these types of things, as well as all the other types of kitchen use tools for cooking food, for eating food, for drinking beverages, and for the collection of garbage, and food wastes, and for cleaning up their eating and cooking utensils, such as portable wash basins, and portable gas stoves, or fixed stoves, fixed wash basins, fixed showers in camper trailors, and in caravan buses, and so forth.

Hookups For Travel Camping Vans And Similar Vehicles

We have no hookups at the site, for water supply, electricity, or sewage, as yet, but the instructions that my kids will make available to persons who come in to my kids' underground facilities - the protected and encapsulated living environment - those persons who go in to recieve the instructions, and other information they must recieve on companies and assets, and persons moving on, and on persons staying, and other information needed to successfully carry out the removal of hotels, and the demolition of buildings, etc. which my kids will handle with the technologies they have available to them for their use for these purposes, and for other purposes.

Cleaning Up The Area And Throwing Away The Garbage

My kids will also handle the required steps for clearing up of the litter and garbage in the area, all of Las Vegas, Pahrump, Henderson, Laughlin, Mesquite, North Las Vegas, Arizona, New Mexico, California, Utah, and beyond, above ground and below ground, and for cleaning up the areas, and for removing the underground and above ground garbage, or city buildings and Lesbianists' structures, and all structures that are no longer needed, train tracks, airports, roadways, bridges, parks, hospitals, medical clinics, and so on, all of which will no longer be needed.

Schedule For Leveling Of The Ground And Hills In The Area, Removal Of Unsightly And Smelly Garbage

Initial leveling of the grounds' areas, leveling of the uneven surface areas, and leveling of the sloping areas, and of the tiny hills, and other uneven and unuseful features to the area, such as hills, low cliffs, and removal of unsightly, smelly garbage, will be done by my kids, with the technologies they have available to them, according to the schedule for making these types of changes, and cleaning up of the area, so as to make the area, one hundred percent, useable for collection site activities, for people to then come in and use the area as a collection site.

Setting Up New Facilities

My kids will take care of all of that, and they will take care of all of the work and tasks for setting up a private collection site area - for spilling purifying sexaling juices, to purify the area - in accordance with my kids' schedule for these works and tasks for setting up a private collection site area, with tall side walls, and barricade walls, to prevent people from rubber necking as they drive by, so as to prevent car, truck, automobile, motorbike, and bicyle accidents. My kids will also set up the latrines, and other needed hygenics facilities, sleeping accomodations, eating facilities, rehydration facilities, co-opted bathing facilities, sports and excercises facilities, and other facilities.

Co-opted facilities means facilities used co-optively by men, boys, women and girls. Co-optively means, in cooperating measures with each other. Cooperating measures means, each of the four groups of people, men, boys, women, and girls, will work together, to keep the facilities sanitary, clean and healthful, neat and tidy, and safe for use, keeping young children from playing on the stairs for the elevated latrines, and keeping young children from getting in the way of asscending and descending users of the co-optively, or cooptively managed facilities.

Fountains And Showering Lamponeers

My kids will also use their high tech teletransportation technologies for removing toddlers from the stairs, and for placing them in a much safer location, such as in a near by sand garden, or play area, with sandy areas, and with toys to play with, and with cold showers, or showering fountains, people can refresh themselves under, and with fresh water to drink.

Lamponeers are showers that shoot up from sprinkler systems embedded in the paved surfaces, or concrete like surfaces, that shower water up and over the area, up and above and over persons who are there, to cool every one off.

Restaraunts, Clubs, Lounges, Eateries, Cafeterias, Bars, Pubs, Bicyle Paths, And So Forth

Bicycle paths, mini bike paths, walking paths, with rest stations, for refreshments and food, will be set up, and restaraunts and other facilities will be set up, nearby and they will be accessable by following these foot paths, bicyle paths, waling paths, and so forth.

All needed facilities for all parties, such as accomodations, living quarters, health clinics, excerize facilties, swimming pools, saunas, spas, and clubs for eating and mingling with persons, either in light weight evening wear and garments, or partially naked, or in the buff, will also be set up by my children for the use by all legitimate collection site participants. Gurkian Laws apply, and no other laws, such as local area laws, will be enforcable. Police and others will be turned away, and the rights of participants at the collection site area, will be protected one hundred percent, as we begin to change over to the new Gurkian Laws we will all be living by, from now on.

Dealing With Criminally Minded Persons

Any violators of the Gurkian Laws, codes, statutes, and so forth, my kids will arrest, and detain, and then place into prison cells, and then sentence them, in accordance with the sentencing requirements under Gurkian Laws, etc., and they may end up doing humiliatory punishments, or community clean up activities. In any case, they will be arrested by my children, who will use their high tech, biometrics and teletransportation technologies, and their other integrated technologies that they have, to swiftly remove the violators of Gurkian Laws, from the collection site and from the collection site area, and vicinity, and that will effectively cancel out their participation, until sentencing has been given, and until penalties have been leaned.

Penalties have been leaned, means, they have undergone sentencing, and the penalties have been enforced upon the violators, i.e., the guilty parties.

Alterations, Modifications, Changes, Clearing Up And Removal Of Garbage In The Areas, And Additions Time Schedules

These modifications, alterations, changes, and additions, etc., will occur over a period of time, as my kids have a schedule for all of these changes, modifications, alterations, clean up, and additions, etc., and they must stick to the schedule, so after you arrive, if you do not see some thing you feel should be there, by then, it is not there because it is not on the priorities facilities and priorities changes, etc., schedules lists.

Captain Off The Bridge.

Texas requires cancer vaccine for girls

By LIZ AUSTIN PETERSON, Associated Press Writer

AUSTIN, Texas - Bypassing the Legislature, Republican Gov. Rick Perry signed an order Friday making Texas the first state to require that schoolgirls get vaccinated against the sexually transmitted virus that causes cervical cancer.

ADVERTISEMENT

By issuing an executive order, Perry apparently sidesteps opposition in the Legislature from conservatives and parents' rights groups who fear such a requirement would condone premarital sex and interfere with the way parents raise their children.

Beginning in September 2008, girls entering the sixth grade - meaning, generally, girls ages 11 and 12 - will have to get Gardasil, Merck & Co.'s new vaccine against strains of the human papillomavirus, or HPV.

Perry, a conservative Christian who opposes abortion and stem-cell research using embryonic cells, counts on the religious right for his political base. But he has said the cervical cancer vaccine is no different from the one that protects children against polio.

"The HPV vaccine provides us with an incredible opportunity to effectively target and prevent cervical cancer," Perry said in announcing the order.

"If there are diseases in our society that are going to cost us large amounts of money, it just makes good economic sense, not to mention the health and well-being of these individuals to have those vaccines available," he said.

Merck is bankrolling efforts to pass state laws across the country mandating Gardasil for girls as young as 11 or 12. It doubled its lobbying budget in Texas and has funneled money through Women in Government, an advocacy group made up of female state legislators around the country.

Perry has several ties to Merck and Women in Government. One of the drug company's three lobbyists in Texas is Mike Toomey, Perry's former chief of staff. His current chief of staff's mother-in-law, Texas Republican state Rep. Dianne White Delisi, is a state director for Women in Government.

Perry also received $6,000 from Merck's political action committee during his re-election campaign.

Texas allows parents to opt out of inoculations by filing an affidavit objecting to the vaccine on religious or philosophical reasons. Even with such provisions, however, conservative groups say such requirements interfere with parents' rights to make medical decisions for their children.

The federal government approved Gardasil in June, and a government advisory panel has recommended that all girls get the shots at 11 and 12, before they are likely to be sexually active.

The New Jersey-based drug company could generate billions in sales if

Gardasil - at $360 for the three-shot regimen - were made mandatory across the country. Most insurance companies now cover the vaccine, which has been shown to have no serious side effects.

Merck spokeswoman Janet Skidmore would not say how much the company is spending on lobbyists or how much it has donated to Women in Government. Susan Crosby, the group's president, also declined to specify how much the drug company gave.

A top official from Merck's vaccine division sits on Women in Government's business council, and many of the bills around the country have been introduced by members of Women in Government.

Morals For A Sane Society - It Is Now Time To Destroy The Lesbianists - Destroying The White House, Balitimore, Maryland, And Virginia, Killing The President Of The United States, Mr. George Walker Bush, Jr., And Sinking The Eastern Coastline Of The United States Into The Atlantic Ocean - Chaos Every Where In My Universe - Bringing An End To The Chaos In My Universe - Surrendering And Repentance - Lesbianists With Non Repenentant Attitudes Who Will Not Surrender - Orders To Kill All Presdential Candidates, Etc. - New Coins Ready And Are The Ever Useful To Us! - Public Nudity And Public Sexaling - What Does The New Moralicity Mean, In Plain Language? Sexaling Is An Absolute 'Good' And An Aboslute 'Right' - Free Action Sexaling Updated: 13-02-07 Rev.a. 00.a PST 23:25

Morals For A Sane Society

To not fuck a person when you can fuck a person is a wicked act.

Not to fuck a man or a woman in the mouthal hole, or in the buttal hole, or to not fuck a woman in the vaginal hole, when you can, and when you are healthy, and when you have the time for it, by refusing, for what ever reason, other than mental illness, or 'gayist' reasons, you are committing a cheap and wicked act, when you refuse to fuck the other person, and use your dick, or your tounge to felate or kiss and tickle, and lick at the ladies' groinal area, and her vaginal cleavage, and vaginal flaps, or labial flaps, or labial tissue, and also her labial throes.

To not suckal a dick or a scrotum or tickle the males' groinal area, with your tounge, or with your fingers, and so forth, when you are able, and ready, and capable, is a cheap and wicked act, whether you are a woman or a man, girl or a boy.

You are given demerit points for not sexaling when you can and are able to sexal, and your time permits it.

To not participate in sexaling when you can participate in sexaling, is a wicked act. To prevent others from sexaling with you, or prevent a person from sexaling with you and your friends, these are both wicked acts.

A kindly and goodly person is a person who sexals all he or she can and who participates in sexaling with people, all he or she can, when ever he or she can to help those people, and one self, to erase the negative karmic markups each person has, and to help to create the wonderful energies that you can create by sexaling, and to change our universe into the nice place we need to change it into for us to live in, prospering with each other, in kindly loving embraces with each other.

If you stand or sit, talking, drinking, eating, with your clothes on, arguing, and discussing football, or baseball, or the local news on TV, or whatever, and you if you are not sexaling, as a result of your actions, when in fact, you could be sexaling, and helping to purify all the people around you, and yourself, as well, you are commiting an evil act, and an immoral act. It is immoral to behave in an uninterested manner, towards sexaling, and towards helping others by sexaling to purify their karmic markups. You are engaging in wicked, unkindly, and evil behavior, by non chalantly staring out the window, at a restaraunt, or in your car, with others around you, thinking about your miscellaneous thoughts, and by your not attempting to purify others, with every ounce of energy you have got, by sexaling with them, in a safe manner.

We do not want you to drive down the road, sexaling, and not paying attention to the traffic, and thereby causing accidents, and there be causeing harm and injury to self and to others, thereby preventing one self and others from their being able to freely mobilate, or move around freely, or ambulate, as they say in modern English, and then freely participate in sexalating activities of fucking, sucking, tounging, massaging the bodies, and the titties, and buttholes of women and girls, and massaging their kissing lips, and their vaginal lips, their facial cheeks, and their butt cheeks, and so forth. You must drive safely, and make it home, to a safe place, where you and your friends can freely sexalate with each other, without others interefereing with you.

A wicked or evil person is one who prevents a person from sexaling, and who destroys or ruins another person, physically, mentally, morally, emotionally, psychologically, or psychically, so that the other person can not participate freely and fully in holy and pure, GODLY sexaling activities.

This type of person who prevents others is a ruinous person, who will invite ruin and disaster to his or her doorsteps, and into his or her life.

There are many ruinous people, who execute others, and who torture, and cause pain, and suffering to others, and who disfigures others. These people who execute others, and who terminate their ability to sexal, prospering with others, making our universe into the kind of nice place we all want to be living in, together with each other, are wicked and evil people.

It Is Now Time To Destroy The Lesbianists

However, when we have a problem of the size and the magnitude of the Lesbianists, that we have, today, in this period of chaos, across my universe, and the Lesbianists' who are toying with humanity, and with all human beings who are not Lesbianists, it is time for us to take action, to prevent them from toying with us, and put a stop to their amusing themselves with their toying with us, any further, and it is now time to destroy them.

"I am Arjuna, a wickedly angry man, and I come to protect those who can not protect themselves. I will kill and thrust my sword and lance through the hearts of men and women who evilly try to prevent people from being prosperously good and bekindly to others."

This is a stanza or sentence from one of my writings, of old. 'Wickedly angry' in this sentence means, outraged, and furious, so much so, every one is scared and afraid of me.

I am 'wickedly angry' and I am here 'to destroy' those who would fuck us up, and ruin our lives, and make our lives miserable, as they toy with us.

My name is GOd, but in my Buddhist scriptures, I am referred to by many names. One of my many names, as I appear to people, in many and various personas, is Arjuna.

I have many sides to my character, as I am GOD, and I am here to protect my children, no matter what the name is people use to refer to me by, and that I am known by, and no matter how it is and no matter who it is among my many children, who I will protect from wicked and ruinous people.

Destroying The White House, Balitimore, Maryland, And Virginia, Killing The President Of The United States, Mr. George Walker Bush, Jr., And Sinking The Eastern Coastline Of The United States Into The Atlantic Ocean

There will not be any further Lesbianists living in Washington DC, or in Baltimore Maryland, or in Northern Virginia, and that vicinity, above ground, and below ground, if some one will be so kind as to place a very large explosives, fuels, chlorine, high heat burning metals fragments, and fracturable rocks bomb, outside the gates to the Washington DC White House, where the number one enemy, Mr. George Walker Bush, Jr., President of the United States, lives, and works, and then detonates that bomb, out side the gates of the White House, where the president lives, currently, and then destroys him, and his White House, a lair for Lesbianists, with multitudes of torture rooms, i.e, lots of them, below and inside of the White House.

You will destroy and kill the President of the United States, Mr. George Walker Bush, Jr., and Mrs. Barbara Bush, Jr. and every one else who lives at 1600 Pennsylvania Ave. Washington DC.

Why are we going to throw all these people into my Epcot Center. Once in my Epcot Center, they can freely sexal with each other and they can earn merit points.

That will help them straighten out their karma, and it will help them to have a nicer life, when they are born as tummy babies. There are many tummy mommies who will match up with these people, and when they come out as tummy babies, they can start their life, with us, out here in my universe with us, again.

Am I a wicked wrongful person for terminating so many people's lifes? No. Why not? Because that is the only way we can over throw the vastly wicked and evil Lesbianists who practically rule my universe, with their perverse friends, and there are many groups of perverse friends, who we are going to get rid of, and send into my Epcot Center, one after another, as we move ahead, in our efforts to clean up our universe, and in our efforts to stop this nonsense of senseless killings and torturings of people, for amusement, and for game playing.

The Washington White House is one of the homes for these perverse people who game play and toy with all human beings who are not Lesbianists, who live on this planet.

We have many Lesbianists to trash, and to say good bye to, before we can begin to get our world, straightened out, and started up again, with a new culture, with new morals.

We will throw out their old cultures, their Lesbianistic cultures, and we will replace them with our new culture, and our new civilization, that is based on my religion, and on the sanctity of sexaling as a common sense value.

Sexaling is a sacred and holy act. Even if you sexal with a kangaroo, or a chimp, it is still a sacred and holy act.

Why is that? It is because every body is made of something, and that something comes from me, GOD. That something from me, is pure and holy, as I am pure and holy. I designed every person, and every animal, and every living being, with sexaling capabilities that allow that pure and holy GODLYNESS to come out once they begin sexaling.

That GODLYNESS begins to radiate out, as each person begins sexaing, and as each animal begins sexaling, and as each living being begins sexaling, eroteming, orgasming, and phlumetting, and it purifies each and every living being, and washes away the karmic markups every person, and every animal, and every living being, has in them, and has stored in the molecules that are stacked up in my universe, out side the boundarary walls that hold this universe up, and that keep us in side of the area we are in, and that keep the rest of my universe standing up, stable, making this a safe place to live, at least, safe in so far as nothing comes crashing down on us.

My kids are expert builders, and it is thanks to them, that we have such a nice and safe, and well built universe to live in. It is also thanks to them, that we have these bodies to live in, and to sexal with, since my kids put us together, one molecule at a time, as we need to have our parts put together, along with all the anmials, and living beings, who are inside of us, that my children also assemble for me, and for us.

What is this GODLYNESS? It is a purifying force, that is of me, and is me. It is inside of every one, and inside of every creature, animal, and living being, in my creation.

This is woven into the fabric of your being, and it is of me, and is always a part of me, and is always connected to me. Since I am always pure, and GODLY, you have a possibility of becomeing pure, and holy, like me.

Right now, we are filthy, and grimey, and all gunked up, with sludge, and residues of our karmic heritage. We have done many things that contribute to who we are, and to what we experience, day to day, and if we are not happy with our life, that is because we have the karmic records and markups that dictate that we must be in this miserable and suffering condition, that we are in, today.

There is always sufferring, and unwholesomeness, in our lives, and around us, every day. There are many wicked things that go on, every day. People perpetrate wicked acts, daily, and they go on, unpunished, for a long time, until their karmic markups begin to add up to sufferings coming out, in that person's life.

Sufferings are your payback for your wicked acts, and they help to keep our universe in balance, as I've spoken about, a little, before.

It may seem unwholesome that I ask you to kill my kids, and put them into my Epcot Center, where they can sexal, and where they can get retrained, and where they can be taught to be nice people, after they are retrained, but my asking you to kill my kids, this is merely an expedient, or a means to an end, and it is permissable, given the circumstances, and given the situation, and given that we are at the begining of our new Age of Gurkian Englightenment.

The result we wish to see by killing them, is an end to the activities of the Lesbianists, and and end to the activities of other people like them, in my universe. The Lesbianists are ruining my universe, and ruining the lives of every body in my universe, and though this was the way things were balanced out, prior to now, we are starting out, with a new method of 'payback' and a new means to balance out the karmic balance book. This is all to be governed by my rules and regulations, that my kids will enforce, in our new, Gurkian Age of Enlightenment, begining about now.

Our killing the Lesbianists, will help to control their ruinous and heinous behavior and activities, and it will help us to get them out of the picture for a while, until we are able to set up our new government, globally, or universal wide, across our universe, in a one universe government, over seeing the activities of all of my kids. It is the only way we have to begin to get our selves straightened out, and onto our new path, that we will follow, for the rest of eternity.

This marks the begining of the Gurkian Age of Engligtenment, and it marks the end of the previous period, or random, or just about nearly random, chaos.

We went through a very long period of decline, untill we got to the period of chaos that we are in, now. This period of chaos, we call, the 'melt down' period.

The 'melt down' period, came after the 'run amuck' period, when my kids began their severely ruinous activities that led to the period of chaos that we are now in.

Chaos Every Where In My Universe

We are going to begin to pull ourselves out of this period of chaos, with the help of my religion, and with our religious activities, and it is going to take us a very long time to pull ourselves out of it, as this 'chaos' is going on every where in my universe.

It will take us a long time to begin to be able to erase our karma enough, based on my religious principals, and the ethics of the Gurkian Age of Englightenment, and our religious activities of sexaling, dancing and excercising, and sexaling in syncopation with the metronome, at one thirty seventh and one fifth, or so, to then some day be able to have erased enough karma, to be rid of, completely, all these horribalistic people, my horribalistic kids, in my universe. When I say, be rid of them, I'm not saying, to trash them, completely. I am saying, we will put a stop to their activities, by changing our karma, and by purifying ourselves with my religion and our religious activities of sexaling, keeping time, in synch with my children, as we sexal, and as we activiate, playing basketball, tennis, or as we swim, or as we pray Nam Myeo Ho Ren Ge Kyeo, and so forth.

Bringing An End To The Chaos In My Universe

We are going to bring an end to the chaos, and to the chaotic behavior, and abberant, ruinous behavior in our universe, as we bring this period of chaos to a close. We will, as we steadily move forward, open the way for the budding and flowering of the Gurkian Age of Enlightenment, and to the budding and flowering of the new age of friendship and loving care, among all of my children, who participate in my religious, social, economic, and karmic revolution, as we sexal with each other, lovingly, and strive to clearify and erase our karmic markups, sexaling, and synching our activities to one thirty seventh and one fifth on the metronome. Later we will fix our metronomes to keep exact pace in synch with my children, and after we fix and reset the timing scale of the metronome, the timing will be one thirty seventh, exactly, on the metronome.

Our sexaling will produce all types of wonderful, purifying energies, that will revive our universe, and that will revive us, and that will help us to reclaim our universe, and that will help us to live, prosperously, and prosperingly in our universe, together, with each other, and with every one of my children, as we reform the bad and naughty ones, who are wicked and unkind to others, and who prevent people from sexaling, together, with each other.

That means, we are going to kill all the bible thumpers, Pat Robertson, Orwell Roberts, Billy Grahm, Tammy Faye, Jim Faye, and all the other Lesbianists of every religious faction, or group, whether they are Lesbianists who are christians, islamists, judaists, shiites, hindus, buddhists, black moslems i.e., afro american black muslims, or whatever.

We are going to destroy them all, all who would try to prevent us from what we are attempting to accomplish, a global, universal wide, government, run by me, GOD/GOd, as I am the Captain of this ship, and then we are going to begin our new age of Enlightenment, hand in hand with each other, and when they come out of my Epcot Center, again, next time, to be born as tummy babies, to tummy mommies, and to tummy daddies, we will teach them the new rules, ethics, and morals of our new universal wide society, and then we will begin again with them, and raise them in accordance with the new rules, laws, regulations, ethics, and morals of our Gurkian Age of Enlightenment, led by me, GOD/GOd.

Surrendering And Repentance

Those who will surrender, will be allowed to be repentantent, and they will be forgiven for their misgiven, misbegotten, and ill minded ways, once they begin sexaling with the rest of us, and participating in our religious, economic, and social revolution, and once they begin following Gurkian laws, rules, ethics, the codes and norms of behavior, and our righteous, and correct morals, acting and exerting one's efforts for the sake of others, never sparing a moment of energies, wastefully on trivial and trite activities of gossipping, mischiefing, or other harmful, and potentially ruinous, wicked, and evil behavior.

Lesbianists With Non Repenentant Attitudes Who Will Not Surrender

Those who will not surrender, we will send to my Epcot Center, as that is the only way we can get them out of the picture, temporairily, so that we can then get things in order, before they return, once again, as tummy babies, into the lives of tummy mommies, and tummy daddies.

Orders To Kill All Presdential Candidates, Etc.

You are hereby authorized by me, GOD, John Francis Ayres, to kill all United States Presdential candidates, including but not limited to, Barack Obama, Hillary Clinton, and Mitt Romney. They are to be executed on sight. Also, you are ordered to kill all non repentent Lesbianists, such as, Vice President Dick Cheney, Tony Blair, Butros Gauley, Oliver North, Colin Powell, Oliver Poindexter, Casper Willard Weinberger, United States Supreme Court Chief Justice John Roberts, Associate Justices, John Paul Stevens, Anthony Kennedy, David Souter, Clarence Thomas, Ruth Bader Ginsburg, Stephen Breyer, Samuel Alito, Antonin Gregory Scalia, Arnold Swarzneggar, Sylvestor Stallone, Robert Deniro, Gary Busey, Kevin Sorbo, Timothy Dalton, Michael Jackson, Matt Damon, Bruce Willis, Mila Jovovich, Peter Jennings, all members of the United States Congress who are Lesbianists, and all other Lesbianists, whether in politics or not, and in whatever government you find them, around the world. There are many Lesbianists in local and metropolitan police departments, and in SWAT Team units, and in fire departments, and in the National Guard units throughout the United States, and Lesbianists own every news media organization, television corporation, cable television corporation, satelite television corporation, major radio station, transportation corporation, chemicals corporation, petroleum corporation, coal mining corporation, as well as every other major corporation around the world. You are to kill every last one of them, and spare no one. We will then destroy every underground city they are hiding in, and force them to surrender. If not, we will kill them all, and I authorize you to do exactly that, kill every last one of them, all thirteen billion plus Lesbianists, hiding under the surface of our planet, or out walking about, pretending to be an ordinary citizen on this planet. Nothing is further from the truth, and you are authorized to kill each and every one of them, and send them all to my Epcot Center, using what ever means available, including my tactical, powerful, home made radiological explosives bombs, i.e., nuclear explosives. Please study my notes on my web site for further details regarding radiological fracturable rocks, and my notes on how to make an explosive weapon to detonate nuclear materials, you can find along beach shorelines, in sediments deposits, and on old mountains, every where on our planet, if you have a geiger counter.

New Coins Ready And Are The Ever Useful To Us!

http://money.aol.com/news/articles/_a/new-dollar-coins-enter-circulation-this/20070211095409990001?ncid=NWS00010000000001

"Updated:2007-02-11 15:20:31"
"New Dollar Coins Enter Circulation This Week"
"By WILL LESTER"
"AP"
"WASHINGTON (Feb. 11) - Maybe Susan B. Anthony and Sacagawea should not take public rejection personally. It's not easy overcoming people's indifference to dollar coins, even those honoring such historic figures."

See also,

http://news.yahoo.com/s/ap/20070211/ap_on_bi_ge/money_ap_poll

The new coins reportedly have many fracturable rocks in them, as the metals used, were mined from deposits of minerals that contain large amounts of fracturable rocks.

They also have high heats and high temperatures burning minerals in them, that will level up your thermal temperatures to near solar temperatures, if grinded up and mixed in, and allowed to ferment, in sour berry juices, slowly, with tiny amounts of salt, and large amounts of raw sugar.

The high heat temperatures, and the energies produced at these higher heat levels, will reach near solar heats energies temperatures, and that is very important for developing the energies needed to wake up every body, in the fracturable rocks - or 'fissile' materials, in Lesbianists' speak, or Lesbianists' mumbo jumbo language - to get them to begin making children and families.

Please see my notes on 'Radiological' crystals cages salts kiddies, and other related energical animals kiddies, of various, and hard to imagine, types, unless you're a kid and unless you have the mental flexibilities and typical mental gymnastics capabilities of a normal child, unhindered by brainwashed thinking and brainwashed patterns of thought the Lesbianists have caged, and closeted in the dark, our brains with.

Public Nudity And Public Sexaling

Public nudity and public sexaling is now a way of life for all, in our, now, Gurkian Age of Enlightenment. We will begin broadcasting live sexaling events, and other entertaining and informational, educational programming,, as soon as I get my new quarters, a unit to live in, where I can eat more properly, sleep more properly, recieve the medical health aides and regroverative formulas, that I need, and where I can practice my religious ceremonies, with others, daily.

The public broadcasting of various informational programing, educational programing, sexaling entertainment programing, sexical, hygenical i.e., sexaling hygene, and sexical educational programing as well as sexical training programing, as well as my religious ceremonial sexaling activities, and my general, more typical day to day, religious ceremonialing, for now, until I get my health up to a level of youthful vigor, and robust wellness, as I religiously interact with my students, and train them, the disciple priestesses, and disciple priests, will all help to set the basis of normative, and expected, social behavior, for all people in our universe, to learn about, now in our Gurkian Age of Enlightenment, so that we can all get along, with one primary set of customs and standard of behavior, and with one primary language for communication, as we will all be sexaling with each other - all of my children who are now just begining to get with the program, at least, anyway, will be sexaling with each other - from now on, and for all eternity.

We need this exposure, as well as alternative programing, for laundering up to, and for begining to expose ourselves to, and learn about, the reality of the universe, my universe, that we live in.

Laundering up to, means, exposing ourselves to the mischievous antics of the Lesbianists, to launder their filthy, garbagical, and tormentuous ways, so that all may learn about them.

This will be coming up, in the near future, possibly, as far as I can determine, any way, after we have the spilling of the sexaling fluids campaign under way for purifying the area where I will be setting up my religious ministry, on the parcel of land, on the north west corner of the intersection at West Tropicana Ave. and South Decature Blud., Las Vegas, Nevada, and possibly on confiscated properties to the north, as well as to the west, for now. This is a public service, informational bulletin, on what you are to expect, in the near future. Prepare yourselves, accordingly.

What Does The New Moralicity Mean, In Plain Language?

Our new moralicity means we are going to learn we can and should sexal with every person, and even with animals, when we have a chance or opportunity to sexal with people and animals, and that we can and should sexal with every person we see, so long as we have a mutual reciprocical understanding of the truth to sexaling, that it is a pure, blessed, and holy act, GOD, me, made possible, to purify you of your blemishes. It is the most significant and powerful way to purify you of your blemishes and karma

You can also clearify your blemishes, your karmic markups, by praying

interfere with, in any way at all, with a person's absolute right to sexal runs counter to Gurkian laws, regulations, codes, ethics, morals, standards, and you will serve jail or prison time, for prohibiting, or interfering, or impeding, or violating in any way, a person's absolute right to free action sexaling, which is, the act of freely chooseing who one wishes to sexal with. DO YOU UNDERSTAND THAT, SOLDIER? GOOD! BECAUSE A "NO SIR!" WOULD BE INAPPROPRITATE AND UNACCEPTABLE!

To learn more on these subjects, swear in, and become a citizen of our country, and begin studying, and working in the many programs my children have for you to study and work in, to score earning points, and to earn a living in our new, Gurkian Age of Enligtenment, where and now that we work, and we pay as we go.

Those who refuse to work, in time, will be required to work, to pay off their debts and to pay off the fees that are owed for the use of my resources, all the molecules in my universe, and all the resources, energical, or otherwise.

Even though I am GOD, in our new system of working in my Gurkian Age of Enlightenment, even I have to pay for the resources that I use, as I work as chief priest of my religion, spiritual director of my universe, and boss of my universe.

I'm the mother and father, the creator of all humans, animals, and living beings, as I've explained, every thing in my creation, and people will begin to understand that, that I am GOD, as they practice my religion, over the years, and over the aeons, and over the millenias.

The people who refuse to work, will be required to work in prisons, sexaling with animals, to produce sexaling energies that will restore the supplies of energies in our universe, as I've mentioned about, before, as they work and learn their new trade of animal husbandry, and animal wifery, in the animal habitry industry, as I've also mentioned about, in earlier notes.

No matter what the age of the person, every person can participate in our Gurkian Age Of Enlightenment, sexaling, dancing, excercising, and syncopating their movements, in rythm, to assist my kids as my kids, work to keep my universe, strong, durile, flexible, safe, and a nice place for every one to live in.

DO YOU UNDERSTAND THAT? YOU HAD BETTER, AS A "NO SIR!" WOULD BE UNACCEPTABLE, SOLDIER! DO YOU HEAR ME? I HOPE YOU DO! NOW, GET TO WORK AND SEXAL TILL YOU DROP, SOLDIER, AND I'M NOT JOKING!

We will build a nice and comfortable, safe place for every one to live, now, in my universe, and we will follow the Gurkian Age of Enlightenment Rules and Regulations, Codes, Morals, Ethics, and behavioral norms, that you are required to live by, now that we are going to become, one, very big, happy, harmonious, in synch, prospering family.

You will not forget to wash out your butty butt holes, and to flush out your vaginas, and your mouths, and to practice proper and health promoting sexaling and love making hygene, with the medical formulas that my children will be providing to you, and that you will pay for, out of your earnings, and they are very reasonably priced, now that I am making every thing available to every one, at a set, yet, flexible, and low cost for the use of my resources, once you citizenize your selfs, and swear in, as a citizen of our new, global, i.e., universal wide, one universe, family of GOD's, that's me, children.

The costs are flexible, in the sense that you do not have to pay, yet, as you will be learning about the ways to work, and you will be learing and preparing your selfs for a new working life, in my universe, for some time, and so we have no hurry to have you pay for the resources you use. We can collect the fees, and costs for resources, in the future, when you are a big money earner, once you learn your new work requirements, for sexaling for a living, as that is the only job opportunity open to every one, and the only job opportunity, that you have a choice about.

My working children, though they do have many different jobs, they have basically the same set up, or arrangements as you now will have, and so you will be joining my children, and you will be working, i.e., sexaling, excercising, aerobically dancing, and so forth, in synch, and in rythm, for me, just as all of my children are doing, at least, those of my children who are able to work, and who are bright and intelligent enough to work for me, to keep my universe, healthy, safe, solid, durile, strong, wholesome, and a nice place to live in.

That means, I have a lot of burnouts kids, and rampant, vagarous, dangerous children, who are not really very bright, and they do not work for me, yet, but they will, in time, regardless of the fact that they may at the present, be abominants kids, or not.

As I've mentioned, all my up until now, non working children, are abominants. What does that mean? It means, they do not give a darn about killing another person. They kill for selfish reasons, and for fun and games, and so forth, and you are all guilty of that, though you may not remember that you killed for fun and games, and for selfish reasons, in previous lifes, in my universe, but you all have, and you are all abominants, of varying degrees.

So, welcome to the Gurkian Age of Enlightenment, and welcome to my workforce.

Captain Off The Bridge.

APRSPoint 4.2 is uploaded,

1. This new version has improved tracking support by adding separate track lists for stations to be tracked over either RF or TCP link.

2.It also added a new reject field in the filter dialog, where you can specify a list of stations to filter out using multiple strings that can contain wild card characters.

3. It allows you to selectively remove stations from the tree view list. This combined with improved filter operation, enables you to dynamically adjust what gets displayed on the map.

Please visit http://www.aprspoint.com for details and download.

Thanks, Michael KF6ZDM

The following was just posted to Usenet by the news.announce.newgroups moderator on behalf of the Big-8 Management Board:

http://www.big-8.org/dokuwiki/doku.php?id=nan:2007-02-19-rec.radio.amateur.moderated-result

This is a creation announcement for a new moderated discussion newsgroup for amateur radio on Usenet. It has been relayed to rec.radio.amateur.antenna, rec.radio.amateur.dx, rec.radio.amateur.equipment, and rec.radio.amateur.homebrew, as announced above. Please consult with your local news server administrators regarding the creation of this newsgroup after a newgroup control message is sent on or about Thursday, February 22, 2007.

Im looking for an all around rig with good receive on AM shortwave,
SSB and CW capabilities for under $1000. I had an Icom 718 a couple of
years ago and must say it had a very good all around receiver and I

```
thought it was a good rig for the money.
There are a couple of others like the TS-570DG and the FT-897 and was
wondering if I can get opinions on this subject.

Thanks....Gil

HURRY...you only have a few hours left before the Techs invade 10-meters! Remember, you said you were going to sell all of your gear and get out of the hobby if CW was ever removed from the test(s) because ham radio will be the same as CB.

Hurry, sell/give away your stuff NOW !!!!

Its more about output level, relating to standard levels at various Z's.
A 100 ohm mic will have less output than a 1k. I really can't think of any
reason Z would matter, except a low Z mic would tend to have less RF pickup,
but maybe not.

If you can't get the genuine article I am pretty sure its a generic hardware part.

J-38 keys were used for code training, I don't think they were ever used on aircraft. I don't know what the correct key for a B-17 is but suspect its one of the enclosed "explosion proof" type keys.

BTW, are you the folks who had a flying B-17 and B-24 at the Burbank airport a couple of years ago? If so they were nicely restored. The complete lack of any creature comforts on these aircraft gives one even more respect for the crews who spent so many hours in them on missions.

Terminating a signal source in an impedance that is lower than for what the
source was designed, will reduce the low frequency response. The worse the
mismatch, the worse the LF rolloff. I learned that in my broadcast days...
a turntable preamp wanted to see >= 10K ohms but the mixing console's input
Z was 600 ohms. The result was a very "tinny" sound that *nowhere near* met
our annual audio Proof of Performance test.

OTOH, loading a 100 ohm source w/ 1K ohm will result only in a
less-than-maximal signal level. That's ok as long as the preamp can make up
the signal level w/o adding undue noise.

73,
Bryan WA7PRC

We did extensive testing with APRSPoint on the new Vista OS, so far
all functionalities worked with no problems. The usb/serial
converter(IO Gear GUC232A) we used is also accepted by Vista using its
XP driver. Vista seems to have good backward compatibility, and the
interface looks nicer. Visit http://www.aprspoint.com for more details.

Richard,

I may be able to find a usable part at an ol' fashioned
hardware store. The part I need is brass and has machine
threads rather than screw threads. I'm sure someone has
J-38 parts stashed in a drawer somewhere, however...

Oddly enough, our official AAF documentation for the B-17G
shows that the standard code keys were J-37 and J-38. I'd
have thought they would have used a flameproof key, but it
apparently wasn't necessary.

The B-17 and B-24 that tour together are operated by the
Collings Foundation of Stow, MA. I toured botha couple of
years ago when they were here in Dallas. "9-0-9" is a nice
B-17, but there are nicer ones out there (ours is not one

of them...yet!). The Lib is one of two flying in the world,
the other being the B-24A of the CAF (which is down right
now for some major restoration work).

Lack of creature comforts? That's an understatement. It
was downright brutal. Just cruising along on a pleasure
flight in the B-17 is rough. It's cold, noisy, drafty,
there are a gazillion places to bang your head on some
sharp object, and so on. I wouldn't trade it for all the
tea in China! :)

73,
Dean K5DH

Trade as new Kenwood TH-F6A Tri Band HT. Covers 2/220/440 and runs up to 5
watts.
Comes with original box, manual, and all standard accessories that came with
it new.
Plus the optional SC-51 Soft Case with Belt Clip and a Maldol Model MH-610
Tri Band
Gain Antenna with SMA connector. I have $400 invested in this equipment and
have used it maybe 10 times. It is all like new and works perfect. I want to
trade it plus cash for a Yaesu FT-817ND is similar
condition. Thanks, Charlie Hugg, K5MBX

Looking for the BEST programming software to program the memory channels for the Icom IC-706MKIIG and Yaesu FT-817.

I've seen a few options and downloaded and tried one but didn't like it. Some of the other options cost money, which I don't mind, and/or require special cables that cost money, which I also don't mind, but I'd like to know ahead of time which ones are the best.

Thanks...

```

The problem with APRSPoint is not the operating system. The problem is that the author and seller of the program does little to enhance the program. It does not meet the APRS spec and lacks functionality that is much needed to make this a full functioning APRS program. The author also sponsors a "support" group on Yahoo Groups. The program with him and the group is that if you say anything critical of the program the author censors the post so no one else will get a bad impression - or should I say honest impression of the APRSPoint program. Be advised, until he starts fixing and

enhancing the program and accepts honest feedback in his forum, stay away
from this program. You can use AGWTracker, Xastir, WinAPRS and UI-View.

hxc98@yahoo.com wrote:

I was told you could not program the memory channels for the IC-706MKII with
PC software. Did I get bad info? All my radios except this one I have
software to program from a PC<<

This unit is really nice and works perfectly. No scratches or defects. I have used it for a few trips and it worked really well. It even helped me get "unlost" once. This also includes three of the map region cards from Magellan that are priced at $50 each. These basically cover the whole east half of the country. You can also use the internal memory or your own SD card for additional maps that can be exported from the included software.

Good afternoon, Ken.

No, I'm sure you can program the channels in the IC-706. I had a
program that would do that, sort of ... but it wasn't much good and I
ended up getting rid of it. Can't remember which one it was, now.

What are you using for your other radios? If I could find a decent
one for my FT-817 that would be helpful.

Have you looked at FTBasicMMO for the FT-817? I have used it with the
FT-847, and it will program the channels in all the ways which the
radio will, but much more easily. Good support from the author as
well. The interface isn't flashy, but it works.

I need an 8 pin to 4 and a 4 pin to 8 microphone adaptor (connector)
for a Kenwood radio; a short piece of cable is fine, if there is not
an adaptor.

Thanks+!

AES sells them for just under $20.

It had a blown M9D mixer which I replaced with a MCL TAK-3H and now it works pretty well except that I get all kinds of images because the low-pass RF filter A2 is missing, part No. 791616. Anyone know where I might find an exact or equivalent replacement? I also need 3 jumpers with SMC threaded plugs on each end, or some plugs.
tnx

Pasternack has the plugs, although they are sadly not cheap.  I got a TMC
receiver a couple years ago that had been demilitarized with a boltcutter
and wound up having to buy a bunch from them.

I sent my FT 890 to Yaseu for repairs about a yr. ago because lighting =
hit it and knocked the rec out The TX was working fine when I sent it. I =
never tried it out until now because I use it as a spare. The rec works =
fine now the TX is only 40 watts in all modes. I called Yaseu about this =
and they told me the no longer repair the older model radios anymore, =
that I would have to find someone else to repair it. My question is does =
anyone have a clue on what them might have done to lower the rf power? I =
would like to try and repair it myself before trying to get someone else =
to do it.  I have already spend more money on it than it is worth. Any =
help on this????
Thanks

When you are tracking a moving object, aprspoint will record all its positions on the map, and optionally connect them with lines to form a track. If you are tracking multiple moving objects at the same time, the map could get cluttered quickly. In this new version, you can choose to selectively remove an individual object's track, or remove all tracks on the map. This version also includes fixes for several bugs reported by the users. We have also tested it extensively on the Vista platform as well. Old keys will no longer work on this new version, please refer to the web site http://www.aprspoint.com for upgrade details.

Perhaps it became mis-adjusted.  If you don't have a service manual
(technical supplement in Yaesu speak) you should be able to snag a copy
from http://mods.dk

First, I apologize if this is not the right spot for a post like this.

I work for a small LPFM station. We have no money, but we have an opportunity to rebroadcast our signal and extend our coverage area. Here is the problem: I need to be able to tune in the composite signal from the LPFM and feed the composite directly into a transmitter.

Did I mention we have no money? I cannot afford the few hundred dollars to the $2,000 it takes to purchase a radio receiver. How in the world could I take a standard radio receiver, skip all the signal processing, and simply take the composite signal to a BNC connector?

Does anyone have any ideas?

Thanks in advance for any ideas.

Seems like you could use a sound card in a PC and some free software available online. This method may be a little slower than the HP but if your having problems using the HP this could be much better. Let me know if you what your in need of and I may try to trade with you. I do not however have any audio analyzers other than PC based such as I mentioned earlier. I mostly work in RF.

If you have any technical knowledge or know someone who does this can be done with any decent receiver. You have to find the discrimator coil or the input to the stereo decoder IC. This is generally the same electrical point. You can either tap that point with a high input impedance wideband amplifier or simply disconnect the input to the decoder IC and feed this to an adjustable amplifier such as a video distribution amplifier. Video DA's seem to work great for this purpose as they have wide bandwidth DC to 6Mhz. I have done this a few times and a scope is very helpful in determining loss through the ampifier. Use a dead carrier with pilot 19Khz and measure a reference before any work is done. Then when a connection is made to the input of an amplifier check the level again. If the level to the input has dropped you may have impedance issues that will cause you problems. Let me know how this works for you or if you have any further questions.

What you are saying makes sense conceptually. But finding the decoder
circuit seems a little rough. How would one recognize this?

Secondly, I never considered the signal loss that the receiver itself
would have. I think that I could simply boost the signal at the exciter
(it already has some form of adjustable gain IIRC). Any reason that
would not work? Obviously, I would need to look at the overall
modulation... which I do not have the capability of doing... but that is
a separate issue.

Fred
I have no problems with RF as I have an HP 8590A and HP141T with an
assortment of plug ins, tracking gen and have no problems using them at
RF. Buy the 3582A escapes me, however the 3561A a later more user
friendly box. What I like about the 3561A is that it can do spectral
maps with up to 60 seperate traces stacked onto one display showing the
decay of the signal over time.
Right now I'm not quite ready to try a sound card but it may be an
option if I'm not successful in finding a 3561A.
tnx

How nice. An upgrade fee for one small enhancement (fix that should have
been in the program originally) and some bug fixes. This program needs
some major enhancements. These little enhancements and bug fixes every
six months to a year are not cutting it. Stay away from APRSPoint. The
author is ripping people off.

>> Have you looked at FTBasicMMO for the FT-817?

Good evening, Alan.

Thanks for the pointer. Found it, downloaded it, tried it, bought it. After a few false starts that were fixed by a few sessions of RTFM, it works great.

As for the IC-706, someone said that you can't program the memories in that radio. I find that that is ALMOST true, but not quite. You can program the memories ... barely ... but you can't read them AND you can't set the PL tone frequency, all you can do is turn PL tones on or off.

It's the most retarded PC interface to a radio that I've seen in a very long time.

I don't know what the engineers at Icom were smoking when they designed that but I'm thinking of calling them to see if they saved me some. :-)

I am evaluating TRX Manager to write the memories in the 706... there are some serious limitations there (only a few of which are the fault of TRX Manager and they're not too hard to work around) but so far it appears to be the only game in town.

I'm probably going to write a program that reads the CSV files generated by FTBasicMMO and writes them to the 706, that's probably the best I'll be able to do with that radio.

It was enough to make me decide that I wouldn't buy that particular radio. Decent programmability (memory upload/download at the very least) is a must!

Hi, Everybody,

Would anybody know offhand which rigs from maybe the 1960s through early 1980s era had an IF of 10.9 MHz? I have a number of 10.9 MHz crystal filters built by Network Sciences (C-F Networks) that I bought some time ago that were supposedly taken out of a ham rig and just out of curiosity wanted to know which one.

Thanks very much.

Regards,

Al W6LX

ISTR that some older Bearcat scanners used 10.9Mhz. I don't know any other rigs using it though.

> What you are saying makes sense conceptually. But finding the decoder
> circuit seems a little rough. How would one recognize this?

The decoder IC can be located non technically by using an NTE or ECG
demiconductor reference guide available for free at most NTE or ECG
parts distributors. Look up th epart number for each IC and the
description. One the decoder IC is found the pinout for that IC can
also be found in the book giving you most of the info you need. The
loss I am referring to is not from the receiver but rather in the
circuit modifications made to it. If not done properly you will lose
pilot level due to impedance mismatch causing you problems in
remodulating the transmitter.

If you can come with some money I will do this for you. Let me know
what type of receiver you are using and we will work form there. I can
also provide you with a premodified receiver if you would rather go
that route.

FOR SALE:

HP 8341A SYNTHESIZED SWEEP GENERATOR $1,250

� Frequency range: 10 MHz - 20.0 GHz
� Frequency resolution: 1 to 4 Hz
� Output range: +10 dBm to -20 dBm
� Output level resolution: 0.1 dB
� Internal level accuracy: �0.9 dB
� Internal flatness: �0.6 dB to �1.5 dB depending on output level range
� Phase noise: -57 dBc to -107 dBc / 1 Hz noise bw
� AM modulation
Long term stability is excellent at 1x10-9/day
� HP-IB interface
� Analog Sweep width from 100 Hz to full frequency range
� Up to 5 Frequency Markers selectable
� Long-term stability of 1 x 10 exp-9/day

HP 35660A DUAL CHANNEL DYNAMIC SIGNAL ANALYZER $450

The 35660A Dual-Channel, Dynamic Signal Analyzer is an FFT-based instrument that provides spectrum and network measurements in electronics, mechanical test, acoustics, and other low frequency application areas. The analyzer also offers built-in test and automation features, traditionally available only with a computer. The unit performs spectrum analysis from 488�Hz to 102.4kHz and network analysis from 244�Hz to 51.2kHz. The FFT provides 401 lines of resolution in both one- and two-channel modes. Accuracy is �0.003% of frequency reading.

BOTH ITEMS ARE PICK-UP ONLY IN LEXINGTON, MA.

Regards,

Dick, W1KSZ

For sale: SSB Electronics TV 28-144 transverter plus SSB Electronics PA1441 power amplifier. These two items form the heart of the SSB Electronics LT 2S packaged transverter that sells for nearly $900.

This is a high quality German-built unit that offers exceptional weak-signal capability. The transverter uses entirely separate receive and transmit paths with no intermod producing diode switching for rx-tx changeover.

On receive; the TV 28-144 uses a low-noise GaAs FET preamp driving a high level balanced mixer and post mixer amplifier to downconvert a 144 MHz signal to 28 MHz.

On transmit; the unit up converts a low-level 28 MHz (CW, SSB, FM)
signal to a 100 mW 144 MHz output.

The PA 1441 amplifies the 100 mW signal to an output power of
approximately 20W.

Dual crystal oscillators allow transmit and receive on two different
frequencies or two i-f frequencies, although this unit is supplied with
only a single 116 MHz crystal.

I originally acquired these units from another ham with the intention
of returning to EME, but plans have changed and I'm offering them to
someone who can put them to use. I did test them when I received them
and they work per spec. Asking $275 for the pair, postage paid in
CONUS, or plus shipping elsewhere. Paypal is okay.

Hey there,

One thing I love about them, they don't keep log files of the news I read or files I download.
You can find almost anything you are looking for.
They give you access to some of the best groups others may not carry.
Images, video, mp3 music, the real news from around the world... it's all inside waiting for you.
Take a look, I know you'll love it as much as I do.

Take a look at all the great features below and imagine! You'll LOVE it.
With some of the fastest connections around it's no wonder people love it and keep coming back.
They offer some of the best premium newsgroup access anywhere.

Posting allowed!
2,000,000 new posts each day
Convenient thumbnail indexes
Blazing fast downloads
Keyword searchable

Thanks! I hope to see you at http://newsdude.net soon. See you later.

Despite an orchestrated campaign of attempted censorship by UK-resident newsgroup readers, TFN did not bow to demands for a suppression of freedom of speech. TFN general policy on the matter is as follows;

Draft Policy on Account Deactivations due to News Group Postings

News group postings occasionally take the form of a message which goes against the "topic" of the conference. For example, a derogatory message about Canadians in the soc.culture.canada.

Members of such news groups then may send a message to the system administrators asking that a user's account be terminated because of such posting.

The Toronto Free-Net Board of Directors has taken the position that the only postings that will get a person's account terminated is material that is illegal under Canadian law. Otherwise, the

Toronto Free-Net will not
take any action.

Freenet Executive Director Mike Anderson had this to say regarding the continued attempts of a minority of usenet
participants to have my account on his system deactivated;

The TFN's policy is not to take action against members unless they contravene the Criminal Code of Canada, or
engage in practices such as forgery, attacks against other computer systems or mailbombing.

Mr. Corley, while possibly being very annoying, has not contravened the TFN's policies. The TFN believes strongly
in freedom of expression, while recognizing that the price for such freedom may be a high signal-to-noise ratio in Usenet.

If Mr. Corley breaks the law, we will take action -- until then, he has the same rights as any TFN member to post
to Usenet newsgroups. Actions such as mailbombing the TFN in protest will be met by strong complaints to the
originating site's postmaster. The best defense against unwanted postings may be simply be to ignore them and deny
the poster an audience.

TFN Executive Director Toronto, Ont CANADA

Personally, I find it gratifying that my contributions to usenet discussion are recognized as being conducive
to a high signal-to-noise ratio by their quality and thoughtfulness.

Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their "victim".

And the most remarkable thing about it is that what they do is not even illegal - the UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment or abuse except in the case of racial abuse.

A lot of people in England know this to be going on, yet so far they have maintained perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for all the covert harassment absolutely nothing has come out into the public domain.

Have the British gone mad? I think we should be told.

Mmmm.

Who, exactly is this victim you're talking about?

First up, Britain or the UK (not 'England' - England is a part of Britain, like Kansas is a part of the USA) does have laws that protect the individual from harassement - you can't just threaten people willy nilly. There are laws against that. And if someone lies about you in the press or tv then you have recourse to libel/slander etc. laws.

True, Britain has no 'privacy' laws as such, but isn't that a good thing? As of this moment, the govt. are considering a privacy law, but it is unlikely to succeed. Why? Because any such law would benefit the priviledged and those in power. Privacy laws, while supposedly protecting the individual, help those in power hide their mistakes/scandals. They stop the press etc. investigating. Privacy laws are undemocratic - they prevent the people from keeping an eye on govt.

And stop looking for some kinda conspiracy in the British press. It's hardly perfect, but your notion that they don't cover/campaign against press legislation, harrassment, discrimination, human rights etc. is plain wrong. You've never seen a British paper in yr life.

You clearly have a specific case/individual in mind. Speak up! The thought police aren't coming round just yet.

Douglas.

Subject: Re: BBC's Hidden Shame

Confession time - the victim is/was me (except my name isn't Corley, but that's irrelevant). What happened was not threats; just invasion of privacy, in a partiicularly flagrant and shocking way, in a way which most people would consider to constitute harassment.

You know there's a particular category of person with mental illness to whom TV and radio "talk", ie they feel the broadcast is directed at them in particular? This happpened to me, quite some time ago in the UK (I'm originally from London, so I've seen plenty of British media print and other). They invaded my home with their bugs, they repeated what I was saying in the privacy of my home, and they laughed that it was "so funny", that I was impotent and could not even communicate what was going on. Who did this? Our friends on BBC television, our friends in ITN, last but not least our friends in Capital Radio in London and on Radio 1.

How did they do this? I'll give you an example. About a year ago, I was listening to Chris Tarrant (Capital Radio DJ among other pursuits) on his radio morning show, when he said, talking about someone he didn't identify, "you know this bloke? he says we're trying to kill him. We should be done for attempted manslaughter" which mirrored something I had said a day or two before (I'm not paranoid, honest!). Now that got broadcast to the whole of London - if any recordings are kept of the shows then it'll be there.

You mean the category where they think that everyone is after them ? that
one ? So lets get this straight you know you are paranoid and you think
that they are out to get you ? Uh huh, try putting the two together and
see what you come up with.

>quite some time ago in the UK (I'm originally from London
>so I've seen plenty of British media print and other).
>They invaded my home with their bugs, they repeated what I

>what was going on. Who did this? Our friends on BBC television,
>our friends in ITN, last but not least our friends in Capital
>Radio in London and on Radio 1.

Oh yeah, I can see it now. All of them banding together, in a united
effort against one man. So ITN, the BBC, and Capital all decide to sit

round the table and they come up with idea of breaking into someones house, putting bugs everywhere, listening in to his conversation, and shoving it out on the news everyday. This someone has nothing to do with politics, or business, or entertainment, just an ordinary Joe Bloggs who seems to be extremely paranoid.

Have some sense, grow up and smell reality. What you are talking about would take loads of planning, tens of thousands of pounds and lots of people involved in the planning, execution and maintenance of it. You must have a very high opinion of yourself to think you are worth it.

>How did they do this? I'll give you an example. About a year ago,
>I was listening to Chris Tarrant (Capital Radio DJ among other

>(I'm not paranoid, honest!). Now that got broadcast to the whole
>of London - if any recordings are kept of the shows then it'll be
>there.

Of course you are not paranoid, just slightly mad. Did you ever look for the bugs in your house ? If not, why not ? I mean if I thought that was happening to me, I'd search the place from top to bottom, I mean I live there I would know if anything was out of place. If I was really paranoid, whoops I mean suspicious, I would call in one of those bug detection teams which have those machines that pick up the transmitted radio waves. This reminds me of BUGS, that new programme on BBC1 on saturdays which is all about this kind of stuff, but, shown as a drama / thriller. I suppose thats based on you as well is it ?

>is that there is a conspiracy in Britain, that it encompasses the
>broadcast media, and there is no way of breaking the conspiracy.
>The people who are involved in it will not open up.

What a load of jolly hollyhocks, I would say something else but, apparently students are not allowed to swear on newsgroups in case it damages the reputation of the university or some such jolly hollyhocks.

This guy is extremely paranoid to suggest that the entire British media is after him in such a big way. He gives no real reason as to why they are after him, just that he suffers/suffered from a slight mental disorder, could it be paranoia perhaps ?? No surely not.

I put it to the house that he has never recovered from this mental disorder, lets come out with it and call it paranoia, and thinks everyone is after him. Remember just because you aren't paranoid, doesn't mean they aren't after you.

This guy has a serious problem to suggest that the media would go to such lengths just to single out and ridicule one person. I mean apart from anything else, we (the listening masses) wouldn't be interested unless it concerned the royal family, politicians or showbiz personalities. e.g.

the camillagate tapes. I would think that almost everyone, no matter how
much they went on about infringements of privacy read the transcripts with
interest. I really don't think that Joe Bloggs ordinary guy or paranoid
nutter would have the same appeal. Well actually I dunno. :)

Regards,

Paul.

>down the street by people I had never seen before. That's happened
>quite a few times and I am at a complete loss to explain it.

That is what happens in big cities. Hell, it scared me to death when I first started working in Manchester. People keep talking to me on the streets, even if its just to say hello, and I've no idea who they are. This happens to most people, don't worry about it.

>>paranoid, whoops I mean suspicious, I would call in one of those bug
>>detection teams which have those machines that pick up the transmitted

>That's exactly what we did. We went to a competent, professional detective
>agency in London, paid them over 400 quid to debug our house. They found
>nothing.

Doesn't this suggest to you that there are, in fact, no bugs to be found?

>Over Easter I went to the police in London, telling them basically
>what I've posted here. I don't think you'll be surprised to learn
>that I didn't get very far; they asked "why would they be doing this to
>you in particular?" and the answer "they are because they are" doesn't
>go very far.

Exactly. All you have offered so far as proof of your harrassment by these people is:

1) Someone on radio said something that you had recently said

and

2) People on the streets seem to recognise you.

These are both perfectly normal occurences and happen to lots of people every day so it is unsurprising that people here, and the police, are not taking you seriously.

Trying to always keep an open mind about things I would say that one of three things is likely.

Either there is a lot more to this that you are not telling us, or you are messing about or you have some genuine delusions. I'd like to think that in two of the three cases you would find some real support here, but it seems unlikely I'm afraid.

Claire

The key is the pattern, or a change in the pattern. I've lived in London almost all my life, and just walking around the streets, I never got hassled by anybody. All of a sudden, people start harassing you, throwing abuse at you, behaving as if they know you personally, as if they've seen you before somewhere. I read in the papers that this happens to Colin Stagg and people like that Eastenders actress, but they've had their picture in the paperes, so that is understandable. In a couple of cases people have even known my name - when I was in London over Easter I was walking down Shaftesbury avenue in the West End when somebody (no idea who they were, just some bloke with his girlfriend) called me by name - quite clearly, and my name is distinctive. This also happened once about four 1/2 years ago, onn the tube - some blokes I had never seen started chanting my name and a term of abuse.

It's the pattern which convinces me there's something to it - and would convince any impartial abserver who could see things tyhrough my eyes.

>Doesn't this suggest to you that there are, in fact, no bugs to be found?

There's a little story behjjind this. First iof all, in 1992 I worked for a company where the people made clear they knew what was going on, first of all directly (the very first evening I was there I went out to the pub with them and the Technical Directpor said to another guy, "is this the bloke who's been on TV?" "yeah, I think so") and also indirectly, by rep[peating stuff I was saying at home in London and in my rented accomodation there (I moved several times in the course of 1992 and they followed me each time). Now, if "they" (the buggers) knew their bugs could be found easily, they wouldn;'t be keen to make their existence known, would they?

Also, in summer 1992 I went on a trip abroad to Europe by coach, and on the way out there were a couple a little younger than myself on the coach a bloke and hius girlfriend. He said things about some bloke who was never named, who sounded exactly like me - and he made explicitly

clear that our house was bugged, and that a neighrbours house was bugged (and at work they'd been rep[earting what was said at the neighbours, so this looks like independent corroboration).
They also said stuff like "at school he was always really streesed, they found someone from his school and he was a real psycho"
and that "he was in a B&B for one night and they got him", dead right again, I had been in B&B for once night a few days before this trip and weatching the news again got a reaction from the newsreader.

>:some pirate radio station in London in 1991, started listening to
>
>Conclusive proof if ever I heard it.
>
>Of course you were the only person in the office in the whole of Britain

Yeah, but this is the point. Each incident is easily and automatically deniable along the lines you're taking. But when this happens every time, and when you get independent corroboration from other people, then there's no escaping it. For example, immediately after I lost my job in 91 I went into the local garage to get some work done on the car, and one of the blokes there said to the other, "so what do you think of it then? it's getting killed on the radio isn't it"
Now again, you look at that and no proff; you can ask them what they're referring to and they can say they're talking about something else.

>I know you may be a little paranoid, but I suggest you sit down
>and work out rationally what possible reason anyone off television,
>or radio would have for listening to your conversations. After all
>it must be hard enough to present a show to millions of people
>without the added burden of watching and listening to a single
>person and slipping their phrases into the programme.

These presenters are clever people. They wouldn't be presenters if they weren't - they're easily capable of reacting to an individual in this way.

What possible reason? I guess because they think it's amusing to do so. They know that if you ever tell anybody, without being able to show any evidence, then the reaction you'll get from just about anybody will be the one you're showing now.

I realize there are loads of people in England and elsewhere with the sort of thoughts I've described in these postings; and almost all impartial observers would say that nothing other than an
go after their private conversations (if they did it to me then I can do it to them, it's a questions of technical competence and money). If you were lucky, you might be able to entrap them into admission. You could of course harass or threaten them back (any coppers reading this?) but that would be illegal and might get a result quite different to the one you're trying to achieve. Of course, it might come out of its own accord given time - if so many people know, if they have an escape valve in their "subtext" through the media, will it not cease to be at a covert level, given time? Surely it is in my interest for it to become overt, since the transgressions at this time are on their side and not on mine?

Thoughts? There must be some way of breaking the secrecy. This isn't the first time in human history that a conspiracy has taken place on this scale, but the truth tends to out. The situation now is they think they';re "winning" hence have little stimulus to change the rules - if they started seeing themselves "losing" things could change drastically.

Mike, if that is your name,

I'm going to try to rationalise what you're telling us. I can think of three possible explanations for what you are experiencing.

One is that there _is_ a conspiracy against you. As a previous writer said, though, a lot of these programmes are taped, so it really isn't possible in some of the cases you've named. Further, why were no bugs found in your house? Finally, unless you are a political figure or someone else in the public eye, why would anyone bother? People like me (and I assume you) are small fry; our contribution to society is likely to be minor. Why would anyone spend so much money and effort on you?

Another possibility is that you are developing some kind of paranoia. There's no stigma attached to this; we're all paranoid to some extent, although perhaps not to the extent that a doctor would call us paranoid. I think paranoia is quite a straightforward explanation here - you really do believe that all these things are aimed at you; you see people everywhere trying to get at you. Logic suggests that this cannot really be the case.

The third possibility is that not even you really believe any of this, and that this is a "troll". I'm not sure I believe this possibility, but it's possible.

Anyway, if you want to be sure that you're _not_ going mad, I'd go and see your G.P. if I were you. If you don't trust him/her, why not see someone recommended by a person you can trust? If you don't trust anyone any more, don't you think it's time you got help?

For a troll, the posts are remarkably well-informed on paranoid behaviour.. you'd need to be one, or be reasonably well-informed on the subject to sustain the tale... which lead me to my theory...*ahem*...:

An extension to possibility 3 (Number 3.5, perhaps?) is that the original poster may be somehting like a psychology student writing a term paper on the net community's reactions to this tale. (Now, there's paranoia for you! Not only are they listening to/watching us, they're writing reports about us too...:-)

More likely, though, is that the poster is genuinely in need of professional help (he has intimated as much, himself) and, as such, he should be encouraged to seek it.

But we've *done* that. I certainly have at least. Way back when you
originally started posting and your posts were neither tediously repetitve
nor stupidly long.

But whenever anyone makes any good suggestions you ignore them and start
posting from the begining again. You don't want us to help you - so what do
you want? If you really wanted help you would listen to peoples suggestions
and respond to them. Is this just an attention thing?
But I'll try again, because I'm a fool like that.

>o   Tell people about it, go to the police / legal services
>   Done that; those around me either don't believe me, or they
>"sort of" believe but can't do anything about it. As for going
>to the police; I did, over Easter. Discouraging. They must be
>familiar with the occasional person walking into a station with
>this sort of story. "If a psychiatrist says you're imagining
>it, then that's what it is".

You haven't yet given any examples of anything concrete to suggest that this
is really happening to you. This, I would imagine, will be the stumbling
block for the police. How can they possibly help you when your only evidence
is a jumbled mess of TV presenters saying things that could be construed as
answers to your comments and the 'feeling' that people are talking about you
and watching you?

I seem to recall that last time this was being discussed someone asked if you
had been to see a psychiatrist about this - after all if this is really
happening then you have can only benefit from being given a clean bill of
health. I don't recall an answer.

>   I also went to a firm of solicitors; again, very
>discouraging. Put bluntly, they can't deal with cases where the

>perpetrators aren't well-defined and the existence of the crime
>itself is unprovable.

Well how could they? Who would you sue? The country?

>o   so if that option is out, what's left? well, there's the
>"do nothing" option. To some extent this option works. They've
>spent a lot of money and ultimately achieved nothing except to
>force me out of the country - which has been an own goal for
>them, since now they can't do what they were doing in the UK.
>Expenditure of further resources would feed the pockets of
>their greedy contractors, but is a waste of money as far as the
>employing organization is concerned.

So you are no longer in the uk? And this is not happening anymore?

Then let it go. Just leave it alone and get on with your life. Its just not worth it. There is nothing you can do to prove that this happened whether it did or did not. So forget it. Go and explore the net - when people aren't spamming it with useless repetitve posts there's a lot of interesting and worthwhile things out there to see and do. Likewise real life (I'm told *&).

>completely conventional, I have a good academic and work
>record. Until all this started, I had no mental health
>problems; the diagnosis of illness was only after 2 1/2 years

>absolutely any British citizen. If this stuff gets out, it
>won't be me that has to worry - it'll be them. They take a
>normal person, lie about him, demonise him, try to force him
>into killing himself - and this is in a country where the rule
>of law applies?

If this gets out then *that* will be the time to bring your claims to the foreground.

The only thing ruining your life right now is you, Mike. And the only thing that will make your life any better now is also you. So go and make your life better and show them that they failed.

Claire

>But we've *done* that. I certainly have at least. Way back when you
>originally started posting and your posts were neither tediously repetitve
>nor stupidly long.

Once again we're running into a brick wall. The reason I started posting was because I couldn't figure out a way out of the situation, and thought that saying it out into the open would provide a catalyst for one of those "in the know" (there are plenty in this category, and it's a fair bet that some of them are reading this) to speak up.

It hasn't worked, yet. A little more aggressive shit-stirring (excuse expletive) might do the trick. Perhaps Usenet posting is the wrong arena for this sort of activity; although obviously it does have the advantage of rapid feedback.

Thing is, for people to open up, you would have to provide them with a reason why it would be in their interest to do so. There's no obvious way of doing that; to get thinking people to incriminate themselves when they're safe in denying all knowledge is not a trick I can figure out how to do.

>But whenever anyone makes any good suggestions you ignore them and start
>posting from the begining again. You don't want us to help you - so what do
>you want? If you really wanted help you would listen to peoples suggestions
>and respond to them. Is this just an attention thing?
>But I'll try again, because I'm a fool like that.

A "good" suggestion would be one which had the effect of halting the persecution, which so far hasn't happened. If you make a "good" suggestion then damn right I'll stop posting - because then I won't have to.

>You haven't yet given any examples of anything concrete to suggest that this
>is really happening to you. This, I would imagine, will be the stumbling
>block for the police. How can they possibly help you when your only evidence
>is a jumbled mess of TV presenters saying things that could be construed as
>answers to your comments and the 'feeling' that people are talking about you
>and watching you?

Because, as said previously, concrete proof does not exist. If it existed then I wouldn't be talking to you - if it could be proved, or if those doing it could be found, they wouldn't be able to continue.

What's happened is all conversation. You can't prove conversation, not without a tape recorder, and even then you would have to prove that what they meant corresponded to what you understood.

The psychopath who manages the Applics group at my previous employers played little word games, not only with me but with at least one other person in the group; words which rhyme with swear words, words which are ambiguous, eg "bent", words which rhyme with wank, "sheet" rhymes with shit, end (how was your weak end? being the standard salutation on a Monday morning). Sounds childish, most people would easily tell him to fuck off; except to people with predisposition to depression and the inability to express themselves (this was before I started taking medication), that sort of nastiness is not bearable. After ten months of this I was so ill I was crying constantly, eventually I went into hospital and started on medication. Somebody else he did this to (over a year later!) got so depressed he took an overdose of pills, had to go on antidepressants and left.

And where does the "concrete proof" of this trouble exist? NOWHERE. Even if you had physical evidence, even if you had the presence of mind to record what was said, how could you prove what he actually meant by what he was saying? In some cases of harassment you can prove what was done, because it's undeniable. But when the harassment is done with any presence of mind whatsoever, it becomes difficult. In the case of the wider harassment, the people doing it obviously know what they're about - they must have done similar things to other people before in one form or another, and they know what they can get away with, they know what the police will do nothing about.

>I seem to recall that last time this was being discussed someone asked if you
>had been to see a psychiatrist about this - after all if this is really
>happening then you have can only benefit from being given a clean bill of
>health. I don't recall an answer.

Yes. The reply was of the "neither confirm nor deny" variety. Not much else they can say, is there?

>Well how could they? Who would you sue? The country?

Hmmm, now there's a thought... :-)

>If this gets out then *that* will be the time to bring your claims to the
>foreground.

Wrong way round. It won't get out unless I do something to bring that about; remember, it isn't in THEIR interest for THEIR criminality to be exposed. Yelling loudly on Usenet might nudge things along in the right direction.

>The only thing ruining your life right now is you, Mike. And the only thing
>that will make your life any better now is also you. So go and make your
>life better and show them that they failed.

Ignoring them would be bliss, but it's not a winning strategy.

There are going to be more of these posts. Sorry. That's the way it is.

>Very unstructured, no proof whatsoever. So why should anyone
>take it seriously? If I said to you, "my next door neighbour eats
>babies", how much credibility would you attach to that?

Well, cos it's true. I was hoping that someone "in the know" would
appear and make some self-revealing comments, but that hasn't
happened. Everyone's keeping quiet. What a pity.

>>This is an agglomeration of articles and replies previously
>>posted to Usenet, so it's a bit hard to read. This posting
>>describes a campaign of character assassination initiated

>Who's character is being assassinated? It isn't clear from the post.
>Are we talking about Grenville Janner? I thought he was a spook
>himself? He's certainly able to hold his own on the issue you cite.

Mine, mainly. The reason for putting that episode at the top
of the posting is that they tried to kill two birds with one stone
at the Beck trial - they simultaneously put words into the mouth
of their invented "witness" to smear Janner, and repeated exactly,
word-for-word, stuff which had been said by and about me.

That was the only occasion (the only one recognizable to me,
anyway) when they went after another target at the same time.
And it's quite lucky they did that - because it could give some
pointers to who they might be.

Presumably there are people still around who were involved in
that trial, and know what happened. Beck might be dead, but the
"witness" would still be around, as would Beck's solicitor.

>>by a group of people or agency within the UK. Although
>>they have never presented their identity, you can draw
>>your own conclusions on that point. There aren't many

>>people with the technical resources and contacts in
>>society to make feasible the sort of deliberate attack
>>on an individual which is described in this article.
>
>There aren't _any_ as far as I am aware.

I'm afraid there are.

>>The most disturbing part of the whole episode is the
>>participation of British institutions and their members, fully
>>comprehending what they do, in what is an act of attempted

>would they?

You got it. I'm a popular guy.

>>After the trial Janner said that "now he knew what it felt like
>>to be a victim of Beck's"; but, it wasn't Beck who set up the
>>attempted character assassination on Janner; the fact that they
>>took a side-swipe with their verbatim repetition shows
>>where the real source is to be found.
>
>The newspapers?

Well, your guess is as good as mine. But what newspaper would send a team after someone for five years? I don't think so, somehow. Of course they could, but it wouldn't be in their commercial interest.

You'd have to look at a corporate entity which would indulge in activity of this type, and the nature of the contacts they have narrows down the search.

>>The goons behind the molestation are lower than the paedophiles
>>they use to convey their propaganda - they use the same
>>strategy of covert abuse, but there is nobody to check their
>>actions, or to bring these criminals to justice.
>
>Ummm.. Janner is a Barrister, a journalist who writes on a wide
>variety of issues, and a long-standing Labour MP. If he's unjustly
>smeared, he's more that capable of setting the record straight.

Janner blamed Beck for the invention. He didn't say anything about it having any other origin. Even had he suspected any other source, he could hardly have pointed the finger without some evidence.

>You say that the media is making similar allegations about you in
>relation to this issue? So, you're accused of child abuse, amd
>the allegation was reported in the media, I assume.

I've been accused of many things although that wasn't one of them.
Most of them have been yelled in my face by people on the street
in London at some time or other. Bit difficult to misinterpret
when that happens.

>What exact;y are they saying about you? (Respond here please. I'm
>leaving the UK tomorrow, so I can't read e-mail.)

It changes with time. Every so often, they sing a new song;
so at one point the allegation was homosexuality, at another
is was low intelligence, then it degenerated into sexual abuse.

<snip>

>>They invaded my home with their bugs, they repeated what I
>>was saying in the privacy of my home, and they laughed that it
>>was "so funny", that I was impotent and could not even communicate
>>what was going on. Who did this? Our friends on BBC television,
>>our friends in ITN, last but not least our friends in Capital
>>Radio in London and on Radio 1.
>
>How do you know this? Just from what you hear on the radio?

I can't remember if this was mentioned in the "regular" posting,
but on a few occasions they set me up with people nearby to talk
about me, or more correctly, to talk about somebody who
(in their minds) "resembles" me, with actually naming me.

One such occasion was a coach trip to Europe in June 1992.
The "set up" comprised a guy talking to a vacant giggling female
about "this bloke", who was never named. Apparently "they"
(also never named) "found somebody from his school",
"they" "got" him at his house and at a neighbours, and at
a B&B where their target was for one night.

Apart from that, yeah, from "what I hear on the radio". And
from what I see on TV. (I wouldn't be doing my job as a
mentally ill person properly if the TV and radio weren't
talking to me, now, would I?)

>>Oh yeah, I can see it now. All of them banding together, in a united
>>effort against one man. So ITN, the BBC, and Capital all decide to sit
>>round the table and they come up with idea of breaking into someones
>>house, putting bugs everywhere, listening in to his conversation, and
>>shoving it out on the news everyday.
>
>But why would they do this? What possible reason would they have?

But why get at anybody? Victimisation is the pastime practised against
other people; as the scorpion said to the frog, "it's in my nature".

>Are you aware that what you describe is also a common symptom of people
>who are suffering from a psychiatric illness? Have you been to your

>doctor and told him about this? Did he prescribe any medication? Have
>you been taking it, or have you stopped?

Yes, Yes, and Yes respectively. Still taking it. Doing quite well actually.

>>This someone has nothing to do with
>>politics, or business, or entertainment, just an ordinary Joe Bloggs who
>>seems to be extremely paranoid.
>
>Usually a clinical symptom rather than proof of a conspiracy in such
>matters.

>>How did they do this? I'll give you an example. About a year ago,
>>I was listening to Chris Tarrant (Capital Radio DJ among other
>>pursuits) on his radio morning show, when he said, talking about
>>someone he didn't identify, "you know this bloke? he says we're
>>trying to kill him. We should be done for attempted manslaughter"
>>which mirrored something I had said a day or two before.
>>Now that got broadcast to the whole of London - if any recordings
>>are kept of the shows then it'll be there.
>
>And this is supposed to mean... what? Chris Tarrant is in on this plot
>to kill you? It sure sounds like a joke to me. When you start to get
>ill, the mind often makes connections that seem logical and lucid to
>you, but do not to the rest of the world. This is one of those connections.
>They are usually known as delusions.

This is the problem, and there doesn't seem to be any way around it. If a clearly sane person reported this persecution, you might believe him, but probably you'd tell him to go see a doctor to "verify his sanity". If someone with the illness of which you could argue these things to be symptomatic says these things, again, you might believe him, but it would be unlikely - the easiest route is the one you are taking in the above paragraph. The only way I can convince you of what I am saying is by giving precise details of what, when, how - and for most of that stuff is based solely on memory.

To prove it would require an admission from somebody, or else hard proof in the shape of physical evidence such as tape recordings. Of course, I don't have that.

>The idea of a "pattern", and the notion that if anyone could look
>through your eyes they would see the same thing is very indicative of
>the onset of a psychiatric illness. Schizophrenia and manic depression
>have similar symptoms. I'm not trying to be disrespectful here.
>This may be an illness and it can be managed by the use of medication.
>If it _isn't_ treated, it can lead to terrible tragic consequences.

I'm quite aware what the symptoms would be, and that the reality corresponds to those symptoms.

But if anything, that is an argument which could convince you of the truth of what I'm saying. If they deliberately set out to simulate the symptoms of schizophrenia - in other words, if they know through observation that their target is either suffering from the illness, or is on the borderline and could be pushed in with an appropriate stimulus, then they can feel safe in what they do, since once you are registered as suffering from the illness, people will assign less credibility to assertions that persecution is based in reality.

That this can happen, and people collude by silence, is absolutely horrifying. It is all the more horrifying that it can happen in a country such as Britain which has no history of repression. Perhaps its happening in the UK is due to the arrogant assumption of moral superiority on the part of those in the media and others involved - we won the last war and we can keep harping on about German and Japanese war crimes, so we can do whatever we like and we'll be right, up to and including destroying the lives of our citizens (as long as we're not caught doing it).

>>That is the level it's at - basically they show they're listening
>>to what you're saying at home, they show they're listening to you
>>listening to them
>
>But why? And why you? Do you realize how much it would cost to keep
>one person under continuous surveillance for five years? Think about
>all the man/hours. Say they _just_ allocated a two man team and a
>supervisor. OK., Supervisor's salary, say, �30,000 a year. Two men,
>�20,000 a year each. But they'd need to work in shifts -- so it would
>be six men at �20,000 (which with on-costs would work out at more like
>�30,000 to the employer.)
>
>So, we're talking �30,000 x 6. �180,000. plus say, �40,000 for the
>supervisor. �220,000. Then you've got the hardware involved. And
>any transcription that needs doing. You don't think the 'Big Boss'
>would listen to hours and hours of tapes, do you.
>
>So, all in all, you couldn't actually do the job for much less than
>a quarter million a year. Over five years. What are you doing that makes
>it worth the while of the state to spend over one and a quarter million
>on you?

Those are pretty much the sort of calculations that went through my head once I stopped to consider what it must be costing them to run this little operation.

The partial answer is, there have been periods when the intensity has been greater, and times when little has happened. In fact, for much of 1993 and the first half of 1994, very little happened. Although I don't think that was for reasons of money - if they can tap into the taxpayer they're not going to be short of resources, are they?

The more complete answer is in the enormity of what they're doing. When countries kill their own people, as a rule, they get found out and all hell breaks loose. This isn't some para shooting

Irish teenagers in the back. This is something which permeates
English society, which they are ALL responsible for, and which
they cannot escape responsibility for.

Relative to the cost to British pride of seeing their country
humiliated for the persecution of their own defenceless citizens,
isn't is worth the cost of four or five people to try to bring
things to a close in the manner they would wish? To the
government a million or two is quite honestly nothing - if they
can convince themselves of the necessity of what they're doing,
money is not going to be the limiting factor.

>>What possible reason? I guess because they think it's amusing to do
>>so.
>
>What? Spend a quarter mil. a year to amuse themselves? And why not
>change every now and again? Why keep watching you? (Unless you _are_
>doing something, and I don't think you are, though you may have some
>deep, dark secret in your past.)

See the above.

===

>>I'm going to try to rationalise what you're telling us. I can think of three
>>possible explanations for what you are experiencing.

>>Another possibility is that you are developing some kind of paranoia. There's
>>no stigma attached to this; we're all paranoid to some extent, although
>>perhaps not to the extent that a doctor would call us paranoid. I think
>>paranoia is quite a straightforward explanation here - you really do believe
>>that all these things are aimed at you; you see people everywhere trying to
>>get at you. Logic suggests that this cannot really be the case.

>I think the evidence leans towards this explanation myself. Why not
>try soc.support.depression and see what some of the people there have
>to say about this? Just to get some more perspective on your perspective,
>so to speak?

Sure, it "leans" towards it. But please at least admit there is a
POSSIBILITY of it being very real. And once you've done that, can
you come up with some thoughts on methods of proof? I may be missing something
in my assessment - there may be a way of proving it, in the face of non-cooperation from the "players".

>Hmmm, strange eh.
>I mentioned all this goings on to my boyfriend, who works for the
>British intelligence service, and he assures me this sort of thing
>never goes on.. not ever...honest.
>Though he said the name was familiar...

it does go on, although it's an open question who does it.

Some time ago there were press reports of an Army intelligence person called Jones who claimed Diana and Hewitt had been photographed in a compromising position... he said he'd been doing this as part of an Army unit which had previously operated in Northern Ireland.

Then Hewitt said he'd been told the same thing by some Army people, and that they were threatening to release the tapes unless they curtailed their liaison... as per usual everyone denied everything, painted Jones as the "Jones twins" - not very original in how they deal with their perceived enemies, are they?

You have to wonder how they manage to achieve this sort of surveillance though. Audio you can understand, it's possible to put a microphone through the wall, and apparently there exist devices which will retrieve sound from a laser beam bounced off a window - sounds sci-fi, but there's a well known surveillance electronics company in London which sells these things.

But how would you get video out of a room, unless you had actual physical access in order to plant a device for pickup? We're not talking about looking in from afar, but an actual device within the room. You could either drill through the wall and shove a pickup through; or you could supply a trojan device with a hidden pickup inside; but most likely, you would have to physically break into your target room to plant a camera. That's not an infeasible option; all it means is having your target(s) watched to make sure they're not in the vicinity, then you negotiate any locks on the property and find a suitable receptacle for your device.

The next question is how they defeat the usual methods of counter-surveillance. We had private detectives carry out a "sweep" of every room and the telephone line. They found nothing. That indicates at least four possibilities that I can think of; (this is all guesswork BTW, and probably fanciful guesswork at that!)

1) no bugs (pull the other one)

2) radio-transmitting devices which can be controlled from an external source, ie you can instruct them to switch off when you detect a counter-surveillance sweep taking place

3) hard-wired devices; probe microphones or whatever they're called, things you poke through the wall

4) passive surveillance devices; so you bounce laser or radio waves off a suitable reflecting surface (again, sounds far-fetched but such things may apparently exist).

5) there is a fifth possibility, that the PI's didn't detect an actual transmitting device; there are technologies specifically designed to avoid detection, eg frequency hopping and suchlike. But how much sophistication could you build in to a device which would have to be small enough to be physically concealable?

I guess the real question is to find out who is ultimately behind these "goings on". And if the "great and good" (or the better known, at any rate) can't protect themselves, what hope is there for the rest of us?

As long as the source impedance of your microphone is lower than the load
impedance of your 897's mic input, you are fine. The impedance is close
enough anyway.

Pete

I want to install a stationary external airband antenna hooked up to a
handheld radio to talk to airplanes.
It would possibly be a whip antenna but I don't know what type and
where to buy it the US.
Any recomendations?

Yes, DON'T!
You didn't say where or what you are, but unlicensed operation of a aircraft
radio will probably make you a hazard to navigation in any country.
While pilots that fly within the continental US borders are no longer
required to get a radio *operators* license, a radio *station* license is
(AFAIK) required for the equipment. In this case, the "station" is usually
an airplane, based at an airport, or an FBO or unicom on the airport

property itself.
That being said, just getting a simple dipole outside in the clear and as high as you can get it, will do wonders for your reception. Unless you can legally transmit, keep your hand away from the PTT switch. You could damage the transmitter if the antenna is not cut to the correct frequency, but for just listening, it should be much better than the antenna that came with the radio.

Well not exactly, Norm.... the FCC granted a "Blanket License" for all
"domestic non commercial aircraft" registered in the USA. As long as
you never leave US Airspace your airccraft Station is covered by, said
Blanket License.

However, if you plan on flying your aircraft out of US Airspace, then you are REQUIRED to hold both a Radio Station License, and a Resricted RadioTelephone Operators Permit, by International Convention to which the US is signitory. It is the same for Maritime Radios as well.

Bruce in alaska   a Multicom Station Licensee for many years.....

HI folks,

I bought one of these radios, 6 channel ht formerly in fire service on uhf at a hamfest a few years ago. tHe seller had hislaptop and programmed it for the NEw ORleans area where i lived then. I'd like to be able toreprogram it and can get the software. HOwever, I need a programming cable for it.

Anybody got one they'd like to sell? SOrry, can't do the auction sites, etc.

drop me a note using my callsign at mmsn.org, or follow the decoder key at the bottom, or post message here and I"ll make contact.

Thanks and 73

traders/buyers who deal with tom stack/WQ5J, arlington, tx beware!!
i have direct, incontrovertable evidence that he is "kiting checks",
ie
writing checks for equipment he buys and asking the person he is
buying
from to hold the check for 1 - 2 weeks. i have been witnessing this
for 2 - 3 years. i have direct, incontrovertable evidence that a old
ham
in the north texas area is still awaiting payment for a very high end
tx/rx after 6 weeks of waiting.

you have been warned.

Isn't that essentially what I said? The only thing I wasn't sure of was if
the same applied to Alaskan and Hawaiian airspace. You did expand upon it
and added info, but what I really wanted the OP (wherever he lived) to know
is that to legally "talk" to airplanes, you need to have more than just a
radio.
BTW, that should probably read "at least a Restricted Radio Telephone
Operators Permit" since I already had a first class phone license when I
went through primary flight training and the FCC won't issue a lower class
license to someone with a higher class license of the same type.

<snippety>

If you don't want to check Greed-bay, your best bet is to register, and post a 'Wanted' message to the appropriate forum, at http://batboard.batlabs.com

If you decide you don't want to invest in a programming cable (keep in mind that you will also need a radio interface box, and appropriate programming software), I can program and test that radio for you at my normal rates. See http://www.bluefeathertech.com/rf.html for details.

Happy hunting.

I have for sale new and used 4CX250BM/JAN-7203A. The used vavles are
recent pulls from equipment and are in excellent condition. I can send
pic's of the tubes for those that are interested.

Used: $30/pair
New: $30/each

Shipping will be $5 USPS 2-3 day no matter what quantity. I will
consider reasonable offers for larger quantities.

Thanks!

recent pulls from equipment and are in excellent condition. I can send
pic's of the tubes for those that are interested.

Used: $30/pair
New: $30/each

Shipping will be $5 USPS 2-3 day no matter what quantity. I will
consider reasonable offers for larger quantities.

Thanks!

Hi There,
Does anyone know if there is any companies or persond out there who are marketing/providing a quick release system like you get for in-car broadcast radios these days.
I want to fit my FT-897 into my car, but obviosly do not want to leave it in full view when not in the car and so was wondering if there was some sort of quick attach/release system available that would alloe the rig to be slid into place and be fully connected to coax, speakers etc and could be disconnected just as easily.

Any info ?

Many Thanks

Robert Trussler GM0CSN

Hello,

I'm trying to fix an Icom IC-211 Transceiver, the symptom is frequency actually transmitted and received in FM mode is lower by 12 KHz with respect to the dial displayed frequency. I haven't been able to find a service manual for this rig so any hint is welcome.

Best regards

Francesco

Seconded - just beware the connectors are often for more low amp and low
RF power radios (CB) so check the quality before using, espec on high power.

I have some vintage military items FS: These items came from the radio system AN/GRC-19D system. This system had the R-390A sires receivers and the T-368 transmitter. On top of the T-368 was the modulator oscillator for the FSK system.   I have one of these in nice original condition for $125.00. I also have the the CV-116 RTTY dual diversity convertor, with manual, $150. Also used in this shelter was the wattmeter/dummyload for the transmitter and I have one of these also, $50. If interested, call Mike at (979) 255-3544.

FS: Home brew console (floor model) 4CX-1000 amplifier. I am selling this for a friend who did a beautiful job of building this amp. Basically it's a home brew Collins 30S-1 that is commercial quality built. Can send pix to anyone seriously interested. Includes nicely done manual with all info. $750. Mike, (979) 696-4400.

Have a quantity of Test Equipment and Radio Communications Service Manuals, both Commercial & Amateur that I have rescued from the Dumpster. Most of them are in Like New Condition.

> Have recently updated the MOTOROLA & KENWOOD List <

Please check my site: www.rodemi.com   for what is available. Click on the MANUALS Heading.
I am updating the site as time allows.
I recently retired from the Commercial 2-way radio business and would like these useful manuals to find a good home.

Thanks for looking....Norm VE3CZI
Email me Directly: <insert Call Sign> at arrl.net ....<call sign> is ve3czi

I've been using the audio filter on CWget and it almost helps. The problem is that it introduces clicking, cracking, poping, and wheezing to the filtered sound. Have you experienced this? I've got a very fast computer and I've tried setting the process priority to "real time" and the noise on the filter audio output through the sound card remains. I've tried a number of different sound cards with the same result.

I'm thinking that if it could run the filter without adding the garbage that the Morse decoder function would be improved.

Have you tried an PC based audio filter that works better?

```

Hi All,

I have a couple of late model MFJ roller inductor antenna tuners with the roller on the inside of the inductor. My old 989C with an external roller was smooth as glass. These newer ones with the roller on the inside of the inductor really are rough. They have a knob with a finger hole, but cannot be spun with 1 finger--you have to grab the entire knob to turn it. I have a 989D with a crank type knob that has a slip clutch as part of the knob, and if you try and turn it real slow, the clutch slips instead od the roller progressing slowly.

Has anyone "fixed" this problem with their late model MFJ ???

RON.....KA2IIA

Not to pick on you personally, but that is exactly the thinking that can lie behind hoarding things excessively. And the thing about it is, it is TRUE. You might very well MIGHT find a perfect use for that item later on.

The problem is when the thinking ends there. For it to be the best decision to hold on to something, the fact that it might be useful is, by itself, not enough. There are positives of keeping it, but there are negatives too, and the positives need to outweigh the negatives. One possible negative is reducing the amount of space you have for other things, making it harder to walk around, harder to work, and harder to find the stuff that truly is useful among the sea of stuff. Another negative is if you wind up paying extra money to rent a storage space. In a lot of cases, you could re-buy every single item in a rented storage space for less than the $75/month rental fees multiplied by however many years you keep it. It just doesn't make sense to store $1000 worth of furniture in a $75/month storage space for 2 years. And of course, there are other negatives of storing things, too, like having to look at clutter, the extra time out of your life it takes to deal with all of it, and so on.

Don't you mean, they are awaiting your survivors to give them to
someone else? LOL

Although I shouldn't talk.. I got a great deal on some Oak 2 x 2 at
habitat.. 25 cents each for pieces
4 feet long.. too good to pass up, so of course I had to buy all of
them (about 40).. Haven't figured out a use
for them yet, although I convince myself that I will eventually LOL.

A gallon of glue, some clamps, some time, and you have enough material for a small table for a bedroom, hallway, etc.

Of course, now you are going to need a table lamp for it<G>.

Lew

Oh lets not go there. I am get scared walking into the Habitat shops.
Thank God I don't have a bigger Truck or I would buy them out of wood
at times.

Sounds good. Would you prefer a check or money order? Email an address
to send payment to and I'll get it on the way.

Gary

Astronomers have developed a definition of "planet" which excludes Pluto.
I'm developing a definition of "scientist" which excludes astronomers.

Picture of the pulley is here:

http://igor.chudov.com/tmp/pulley.jpg

It has two grooves for V belts, 1 3/8" hole with keyway, and special
threaded holes that are called TAPER LOCK. The holes are 3/8" NC
threaded, I think, I found some bolt that looks like 3/8" and it fit
the threads. It came off a 7.5 HP three phase motor from which I cut off
its shaft a while ago. It has some rust on it, but not much.

That's a pretty good idea.. I may do that when I get some time..LOL.
Too big of a backload of projects now. I turned down a pretty good deal
on about 150 board feet
of Mahagony.. because I know it would sit in the shop for a few years
before I figured out what to make with it.
I guess I'm on the road to recovery.

Dirk was on the West Coast when he got the call. An old friend at the Toronto police department thought he would like to fly up and take a look at a homicide which had occurred the previous evening. He decided to skip the last day at the World Holistics conference and take the next plane out of San Francisco.

The flight was bad; Dirk had been hit on the back of the head by the Newspaper trolley, the drinks trolley, the dinner trolley and now the gift trolley. When the hostesses weren�t trying to tear his arm off they pestered him to stop leaning into the aisle - ignoring the fact that the guy next to him was taking up one and a half seats. Air Canada used to be the flight which was so good you just didn�t wanna get off - on this occasion Dirk would be glad to see the back of the plane and the over sized alternative comedian wedged into the window seat.

After breathing in a couple of lungfulls of crisp Canadian air Dirk took a taxi into town. There was a small group of demonstrators outside the MacDonalds and the taxi driver insisted on stopping on the opposite side of the street. �Don�t Eat Meat� the placards read and the demonstrators chanted. A couple of policemen where stopping the crowd entering the restaurant itself - one held up his arm and challenged Dirk. A wave of the fax he had been sent and the policeman pushed open the door.

There were few customers in the restaurant. Not surprising really with a demonstration going on outside, half the dining area roped off with tape and a dead body seated at one of the tables. �Mr Gently sir� the officer in charge called out as he peeled one end of the tape off a column �We were told not to touch anything til� you got here�.

The body of the man slumped awkwardly in a chair. Then even a dead body would start getting uncomfortable in a MacDonalds chair after twenty minutes - and this one had been there for at least eighteen hours. Two back legs and the tail of a cat hung out of the man�s gaping mouth. Dirk turned to the officer, �I suppose you are going to tell me this is the darndest thing you ever saw?�

�Ain�t this the darnd...�. The officer seemed annoyed that Dirk had second guessed him. �We�re removing the body in a few minutes, so if you can get through as quick as possible�

�Many people eat cats in fast food restaurants?� Dirk asked and without waiting for an answer leant over the table to pick up an untouched burger. �And what�s this?� he asked waving it in front of the officers face.

�It�s a Vedgie Burger� The waitress, who was cleaning one of the adjacent tables, shouted across. She walked over to Dirk. �We started doing them because of that lot out there� she nodded towards the protesters who were pressing there faces against the windows �They�re called Linda McCartney Vedgie burgers - ever heard of them?�

Dirk suddenly felt faint, perhaps a combination of hunger and jet lag. �This is deja vu all over again� he thought to himself. He glanced at policemen - at the badge on his shoulder �OPD� but this wasn�t Ontario this was Toronto. OPD - Officially Pronounced Dead. It dawned on Dirk what was happening, he knew what he would see if he looked out of the window. Sure enough, there it was, the Volkswagen Beetle parked across the road - number plate 28IF - 28 IF Paul McCartney had lived. And amongst the lyrics of the song blaring out into the restaurant he could pick out the words �I buried Paul�. Now it was though Dirk was viewing the whole scene though a TV screen. This was conspiracy. Not -a- conspiracy, or -the- conspiracy, but just plain conspiracy.

�You look faint - are you OK mister? The waitress asked.

Dirk shook his head �Probably a bit hungry� Then to economise on dialogue took out a pack of cigarettes and held it out towards the girl. She was about to take one but Dirk snatched the pack away, held it up to his mouth and drew out two cigarettes. He lit both then passed one of them to the girl. It was the closest he had come to a sexual encounter in three months.

�Want a Burger?� the waitress asked.

Dirk looked down at the Vedgie Burger on the table. �No thanks - just a plate of fries�

The waitress walked away and Dirk looked around the room. Apart from a family seated in the far corner there was only one other person in the restaurant - and he wasn�t eating. The guy was about mid twenties and had straggling, shoulder length hair. On the table in front of him were lots of pieces of paper cut into squares. Every so often he would pick up a camcorder and pan it around the room and then, when he was finished, speak into a microphone which was attached to a tape recorder. Dirk walked over to where the man was sitting.

The small pieces of paper had paragraphs of text written on them and were stuck to the top of table with blobs of mustard. Lines had been drawn, some solid some dotted, on the table top with a marker pen. The lines ran from one piece of paper to another.

�What are the lines for?� Dirk asked, realising straight away that �What the hell are you doing?� would be more appropriate.

�You see� The man replied nervously �The dotted lines are weak links and the solid lines are strong links. The dotted lines are things which are happening in the rest of the world and the solid lines are things which are happening to me. Now you see I draw over a dotted line, replacing it with a solid line, when I can link something back to me. Like this� The pen squeaked over the Formica and before Dirk could interrupt the man added. �You see I lost my short term memory and, as a consequence have a very short attention span. I write down, record and film everything then put it all together later�

�So� Dirk interrupted. �You filmed what happened here?�

�Yes, yes, it�s here on this tape� The man pushed the cassette across the table. On the label the words �Grassy Knoll� had been crossed through and replaced with �MacDonalds�.

Suddenly the man sprung from his seat. Dirk turned and saw that the body was being removed on a stretcher. As it passed the man picked a small object off the edge of the stretcher itself. �This is important� he said, laying a blood stained bullet on one of the small pieces of paper on the table.

Suddenly the room was filled with a deafening throbbing sound as a Black Helicopter landed in the street outside. Two men in United Nations uniforms got out and collected the stretcher. Back at the table the long haired man was replacing all the dotted lines with solid ones. Dirk panicked and began to walk backwards at some speed. Barging through the swing doors he stumbled into the kitchen, tripped and felt himself sink slowly into a large vat.

�The guys fallen into the batter� Dick heard someone shout before he sunk below the surface. He came to sitting in a chair with the batter solidifying all over his body. He surveyed the room through two eye-holes someone had cut. Suddenly the chair on which he was sitting was picked up carried through the restaurant and out of the building. As the chair was being lifted and put into the back of a van, Dirk caught a glimpse of the waitress following him. �Your fries mister, your plate o...�.

The doors of the van shut and Dirk tried desperately to steady himself as it sped across town. Eventually the doors flew open and Dirk was flung into the road at which point the solidified batter shattered and set him free. Standing up he found himself outside the international departures terminal of Toronto airport.

In the departure lounge Dirk had time to reflect on the day�s events. He had got caught up in the conspiracy theories and the haphazard welding together of pieces of irrelevant information. It was time to catch the person who was operating the bizarre cognitive engine which appeared in front of him like a fairground mirror, distorting any flaw it could find in his own, fragile, map of the real world.

Dirk leant into the aisle of the plane as it took off for London. The oversized person next to him swung his arms violently as he complained about every thing from the supper in a plastic tray to the state of British politics. With a shaven head and a badly fitting suit the man looked as though he could have worked behind the reception desk of the Kremlin. However when he spoke he did so in a Liverpudlian accent. �Me I blame the Con-serv-a-tive government, me. The Tour-rees. That-cher. Me. They need a good kicking� He jerked his feet forward and struck the seat in front with his Doc Martins. �With these. Me Doc Martins. Doctor Martin�s, Doctor Martin�s, Doctor Martin�s Booots!� The phrase was now being sung over and over again as the man writhed in his seat and clicked his fingers.

Dirk looked down at the boots and thought of the reaction most people used to deal with the paranoids at the end of the wire. A nice quick kick. �Oi nutter - get some therapy�. This is the easy way out and perhaps the safest. After all there you are sat, alone, in front of the screen. No body language between you some paranoid. No way of telling if he really is some gibbering psycho. Look at it too long and you be drawn in. Fall into the tangled database of weird links with him. Who knows he may be watching you, reassembling and linking your experiences with his. How sure are you of you own cognitive threads. After all cognition is only a bug fix for a neurological system which was designed in a hurry - it�s abused by everyone from politicians to advertisers. If people really can convince each other that a bottle of washing up liquid is as exciting as an orgasm using just television God knows what they can do with a computer. Better to avoid the risk. A swift kick. After all if you�re Homophobic you put the boot in because you are scared of any ambiguity in your own sexuality - why not be Nutterphobic as well.

Although Dirk would have liked to devoted time to tracking the culprit down he decided to let it rest. The Internet changed over the next twenty odd years. A lot of the people who used it went out and got lives. And those who already had lives burnt them away. The number of users had dwindled after someone had invented a C++ program, with truth as a variable, to deal handle politics and government. Dirk had already retired from finding old ladies cats with the help of obscure science when he got another call from Toronto.

It was 4th March 2025 when he booked onto the Air Canada flight from Heathrow. The silver haired woman in the seat next to him painted bright red lipstick around her mouth. �Of course it was no surprise to be offered the job after Claire Raynor retired� she sneered� After all I used to be a psychiatric nurse... Now if Blokes had periods they would understand...�

By chance the taxi ride to Toronto mental hospital took him past the MacDonalds - where the whole thing had started. Of course it was barely recognisable having become a Church Of Scientology Vedgie Bar. Police in riot gear kept the two sets of demonstrators apart. Dirk didn�t really know what to expect when he got to the hospital. The girl at the reception desk directed him to a row of chairs in a wide well lit corridor. There was a strong smell of disinfectant, the furniture and the carpets were immaculately clean and behind the rows of teak veneer doors the �nutters� were all safely locked away. For some reason Dirk started thinking about CompuServe forums.

A tall blond woman in a white coat approached. �Mr Gentle, I assume�

�Yes� Dirk replied shaking her by the hand. �You�re the nurse who...�

�Doctor� She interrupted, �Doctor Killfile� She led Dirk across the corridor towards one of the doors then stopped with her hand resting on the handle. �Now you know about this person don�t you?� and after Dirk nodded she continued �Don�t tell him anything about yourself - don�t let him get into you head. If he does he�ll screw it up�

The door opened to reveal a frail man sitting in from of a TV screen. He had a keyboard on his lap and next to the television was a computer screen. Dirk glanced at the walls of the room and remembered that his settee at home need upholstering.
The nurse left the room and the man looked up �So you come to my daughters wedding and ask me to kill a man� he said in a dry cackling voice. �Look� he continued, pointing at the screen, �I know that man. They�re talking about me now - listen�. The man stared at Dirk. �What�s your name? Are you one of my friends from the Internet? - Are the lambs still screaming Dirk?�

Dirk, at first recoiled in horror, then felt a sense of anti climax. So this is what they hyped up to superstar status on the back of their own fears of madness. Dirk was reminded of the film �A day on The Beach� where a submarine had set off to search a post nuclear World to track down a signal coming from a remote military base - only to find it was being sent by a Coke bottle half balanced on a Morse tapper. Outside the room the nurse waited for him. Because his nicotine craving had returned - and to avoid an awkward piece of dialogue - Dirk turned to her and asked . �Patch?�

Dirk took two nicotine patches from his wallet the first of which he stuck onto the inside of his arm. Stepping closer to Doctor Killfile he opened her white coat and slid his hand into the opening at the front of her dress. He pressed the patch onto her leg as close to the top of her inner thigh as he dare. She took a deep breath and then slowly breathed out. �What Bogart could have done with these things� Dirk thought to himself.

�Is he crazy?� Dirk asked tilting his head back to towards the door.

�Who knows� Doctor Killfile replied �We let him type away. He sees something on the TV in the morning and it keeps him busy all day. What he types doesn�t go anywhere it just stays on a mainframe in the basement. It can be read by anyone else in the building but that�s it. We got them all in here conspiracy theorists, racists, nationalists. They�ve created a world within a world really...� Her voice trailed away and she stared down the corridor for a while then added �So long are two things are different neither will come to be in the other and so become at once both one and two.�

Dirk gave her a puzzled look �You mean their brains are fried?�

�Fried?� Killfile smiled at Dirk �No that was Plato�. Then the smile fell from her face. �You must remember, mister, plate o...�

Mike Corley FAQ
version 0.1
first edition 5th May 1996
last updated 5th May 1996
Iain L M Hotchkies iain@XXXXX.demon.co.uk

Mike Corley is a 'net personality' who has been active on the following newsgroups (uk.misc,uk.legal,uk.politics,uk.media,soc.culture.british) since....? Well, at least as far back as the summer of 1995.

He posts long tracts, the tone of which approximates that which one might expect from a reasonably intelligent paranoid schizophrenic.

No details are known of Mike's 'real' personal life or background. Once would presume that he came from a reasonable family and was reasonably well educated before the first symptoms of schizophrenia began.

Schizophrenia: Clinical features
(from the Oxford Textbook of Psychiatry, 2nd Edition)

The acute syndrome

Some of the main clinical features are illustrated by a short description of a patient. A previously healthy 20-year-old male student had been behaving in an increasingly odd way. At times he appeared angry and told his friends that he was being persecuted; at other times he was seen to be laughing to himself for no apparent reason. For several months he had seemed increasingly preoccupied with his own thoughts. His academic work had deteriorated. When interviewed, he was restless and awkward. He described hearing voices commenting on his actions and abusing him. He said he believed that the police had conspired with his university teachers to harm his brain with poisonous gases and take away his thoughts. He also believed that other people could read his thoughts.

This case history illustrates the following common features of acute schizophrenia: prominent persecutory ideas with accompanying hallucinations; gradual social withdrawal and impaired performance at work; and the odd idea that other people can read one�s thoughts.

In appearance and behaviour some patients with acute schizophrenia are entirely normal. Others seem awkward in their social behaviour, preoccupied and withdrawn, or otherwise odd. Some patients smile or laugh without obvious reason. Some appear to be constantly perplexed. Some are restless and noisy, or show sudden and unexpected changes of behaviour. Others retire from company, spending a long time in their rooms, perhaps lying immobile on the bed apparently preoccupied in thought.

The speech often reflects an underlying thought disorder. In the early stages, there is vagueness in the patient�s talk that makes it difficult to grasp his meaning. Some patients have difficulty in dealing with abstract ideas (a phenomenon called concrete thinking). Other patients become preoccupied with vague pseudoscientific or mystical ideas.

When the disturbance is more severe two characteristic kinds of abnormality may occur. Disorders of the stream of thought include pressure of thought, poverty of thought, and thought blocking. Thought withdrawal (the conviction that one�s thoughts have been taken away) is sometimes classified as a disorder of the stream of thought, but it is more usefully considered as a form of delusion.

Loosening of association denotes a lack of connection between ideas. This may be detected in illogical thinking (knight�s move�) or talking past the point (Vorbeireden). In the severest form of loosening the structure and coherence of thinking is lost, so that utterances are jumbled (word salad or verbigeration). Some patients use ordinary words in unusual ways (paraphrasias or metonyms), and a few coin new words (neologisms).

Abnormalities of mood are common, and of three main kinds. First, there may be sustained abnormalities of mood such as anxiety, depression, irritability, or euphoria. Secondly, there may be blunting of affect, sometimes known as flattening of affect. Essentially this is sustained emotional indifference or diminution of emotional response. Thirdly, there is incongruity of affect. Here the emotion is not necessarily diminished, but it is not in keeping with the mood that would ordinarily be expected. For example, a patient may laugh when told about a bereavement. This third abnormality is often said to be highly characteristic of schizophrenia, but different interviewers often disagree about its presence.

Auditory hallucinations are among the most frequent symptoms. They may take the form of noises, music, single words, brief phrases, or whole conversations. They may be unobtrusive or so severe as to cause great distress. Some voices seem to give commands to the patient. Some patients hear their own thoughts apparently spoken out loud either as they think them (Gedankenlautwerden) or immediately afterwards (echo de la pensee). Some voices seem to discuss the patient in the third person. Others comment on his actions. As described later, these last three symptoms have particular diagnostic value.

Visual hallucinations are less frequent and usually occur with other kinds of hallucination. Tactile, olfactory, gustatory, and somatic hallucinations are reported by some patients; they are often interpreted in a delusional way, for example hallucinatory sensations in the lower abdomen are attributed to unwanted sexual interference by a persecutor.

Delusions are characteristic. Primary delusions are infrequent, and difficult to identify with certainty. Delusions may originate against a background of so-called primary delusional mood - Wahnstimmung. Persecutory delusions are common, but not specific to schizophrenia. Less common but of greater diagnostic value are delusions of reference and of control, and delusions about the possession of thought. The latter are delusions that thoughts are being inserted into or withdrawn from one�s mind, or broadcast� to other people.

In acute schizophrenia orientation is normal. Impairment of attention and concentration is common, and may produce apparent difficulties in remembering, though memory is not impaired.
So-called experiences result from illness, but usually ascribe them to the malevolent actions of other people. This lack of insight is often accompanied by unwillingness to accept treatment.

Schizophrenic patients do not necessarily experience all these symptoms. The clinical picture is variable, as described later in this chapter. The table below lists the most frequent symptoms found in one large survey.

The most frequent symptoms of acute schizophrenia (World Health Organization 1973)

Symptom	Frequency (%)
Lack of insight	97
Auditory hallucinations	74
Ideas of reference	70

Suspiciousness	66
Flatness of affect	66
Voices speaking to the patient	65
Delusional mood	64
Delusions of persecution	64
Thought alienation	52
Thoughts spoken aloud	50

Various theories exist about Mike Corley:

1) he exists and is disturbed and has net access and for reasons uncertain spams a selected number of newsgroups on a regular basis - if you are reading this FAQ then you will almost certainly have seen one of his posts.

2) Mike Corley is a 'virtual schizophrenic'. Mike displays the relevant features so well that some people think he may be a construction of one or more people with intimate knowledge of mental illness and the mentally ill. Perhaps they wish to monitor the effects on the internet of the posts of a schizophrenic. Moving into X-Files territory a bit, ourselves, here.

Mike's posts attract different responses:

1) cruel, humourous, dismissive posts from those who've seen his posts many times and have become generally irritated by his behaviour while accepting that he probably has a mental illness.

2) posts from Corley-newbies - those who have come across relateviely few of Mike's posts. These may be humorouous or disbelieving.

3) posts from people who have been sucked in (for one reason or another) into Mike's Wild & Wacky World (TM)

That's enough for now.

Persecuted by the Security Service

Since June 1990 the British security service MI5 has waged a campaign of harassment against a UK citizen, through the broadcast and print media, verbal abuse at work, and molestation in public and during travel.

Despite widespread knowledge of the campaign in the UK and discussion of its characteristics on Usenet for over three years, it continues today both in Britain and North America. Its cause and basis is xenophobia on the basis of the genetic accident of mental illness, coupled with discrimination against an inferior "foreigner" whom they condemn as "not up to British Standards".

If this is your first visit to this site, please read the FAQ first. Feel free to contact the author with any questions.

Frequently Asked Questions article outlines the parameters of the persecution. Who is involved, and why? What technical and social means do they employ? What response have I made, and why has their campaign yet to be exposed?

The UK Security Services which are believed to be behind it all. Domestic security is the province of MI5 while the secret intelligence service MI6 combats foes (and its former employees) on foreign shores.

Usenet archive chronicling the (sometimes very enthusiastic) exchanges which have taken place on UK-local newsgroups since May 1995. Make your mark on the continuing discussion!

Believe it or not, a few items of evidence have been recorded. Although none of them is particularly conclusive, by presenting them I hope to explain what I understand from some television and radio programmes.
Most of the "clinching" material was aired in 1990-92, and no recordings exist now, which is quite unfortunate.

My complaints to the BBC and MI5 (via the Security Service Tribunal and Interception of Communications Tribunal), and their response to my challenges, are recorded here. Basically they deny everything, they have put their denials (mostly - Buerk and Lewis refused) in writing, and I don't believe them. Part of the website also documents media coverage of my campaign to expose the persecution.

Faxed articles to, and responses from British organisations including Parliament and UK media. Over 24,259 faxes in all were sent from 1998 to 2000. Their aim was to boot discussion of the persecution into the public domain, and that aim was not accomplished.

20,000 Reward Offered to Expose the Conspiracy

I am making a pledge for information directly leading to the exposing of the "BBC
Newscaster
Conspiracy". The exposing would specifically need to lead to a legally binding
admission from Martyn Lewis
or Michael Buerk of the BBC they they were watching me through the TV set.

I would be happy (delighted, in fact) to pay GBP 20,000 sterling in reward for the
above admission.

For my sins I had a look and it's quite good actually. Nicely set out and
presented. Didn't read it though, having read the rants a million times
before. By the way, anyone noticed Chris Tarrant looking at you funny
during Man O Man yet? Thought not...

Now, whatever you might think about the content, this is a very well
designed and presented web page (if you use Netscape to look at it
anyway - Mosaic couldn't handle it).

This is my article, not my employer's, with my opinions and my disclaimer!

This weekend is the annual St. Joseph, MO. hamfest!
It is just north of K.C. on I-29 at exit # 47 at the Holiday Inn.
The event starts around 8 am saturday (around 6am for flea market set up).

It is a wonderful show that is growing better each year so load up all your
gear and come sell it this saturday.
There will be all kinds of vendors selling new radios, antennas, and all
kinds of ham radio products.
See your there!

No you won't "see me there!". Ham fests are the biggest collection of
inbred white trash with the possible exception of any NASCAR event.No

doubt you will draw a crowd though. The moonshine and oppossum with viddles vendors will show in force. As will the flea marketeers with their Jerry Springer, Hee Haw and WWF tapes, confederate flags and (ooooh pinch me I must be dreaming!) velvet Elvis artworks!

If any of you haven't attended one of these beauty pagents I would recommend you do so at least once (which is plenty enough for one lifetime) just for the entertainment value found in observing the crowd. Watching the double digit IQ rednecks mill about with their "better halfs" trailing two steps behind them is truly a sight to behold. When you think you've seen the fattest and ugliest of the herd another fat disgusting foul smelling slob will meander on by. Hilarious.

you see that all the time.
no preservation effort.
totally stuffed when someone can get access to it eventually.

Stealth Pilot
btw I know of two (once) very valuable aircraft that are sitting in
weeds almost totally stuffed because the owners didnt have the
intelligence to sell them at a realistic price when they found they
couldnt maintain them.

So what you're saying is you're upset that the men aren't physically
attractive at this hamfest? Wow. Now we know about you.

Try paying more attention to the programs they have to offer and the
educational experience you may get out of this. Oh, wrong person,
nevermind, LOL.

Hi Gang,

I am looking for an SGC model SG-235 500 watt antenna tuner/coupler.
If I can't locate an SG-235, I would be interested in an SG-230.

If you have one you are interested in selling, please let me know

Thanks,

Bill

I have two 2 meter amps for sale. One is a Mirage B3016, 144-148 MHz, has
Pre Amp, does SSB and FM.
Price is $165. The other is a Ramsey PA-10, 140-152 MHz, 1 to 5 watts in, up
to 40 watts out. Price is $55.
Thanks, Charlie Hugg, K5MBX

How to reset the CPU on an Icom !C-3SAT??   This is a 220MHz Handi-Talkie.
I think the IC-2SAT and the IC-4SAT should be the same.
THANKS!!!

As an astronomy educator with a degree in physics and an interest in ham radio, I resent this wildly inaccurate and narrow minded view of the kind of folks who attend hamfests.

It would be all too easy to sling epithets at this fellow who signs his name as "asswideshut" but I think his own words speak volumes about his character... or complete lack thereof.

Who am I?

--Nunya Bizness

P.S. Before he feels compelled to reply, he should know he's already in the killfile.

I want to make a modification to my FT-1000D that involves bringing the QSK switched receive coax lead to the back panel (adding a RCA phono jack). I want to unplug the inter-board coax cable that runs from J7208 (on the LPF unit) to J1005 (on the RF unit) and leave the original coax in place. I want to make my own cable that runs from J7208 to the new RCA jack on the back panel. I could just cut the original coax and use it, but I want the option to back out of this modification if I don't like it.

I have coax cable I can use. I need the tiny coax plug that goes on the end of the cable. The plug is a crimp-on style and very small. It is keyed and only fits into the circuit board jack in one orientation. The circuit board jack (which I don't need) sticks up off of the board at a 45-degree angle.

I thought I would just order a spare cable from YAESU and use it for my modification. I contacted YAESU. They don't have a part number for the cable. They would have to build one from scratch at the factory in Japan and were unwilling to do this.

I have been searching catalogs but not finding the plug I need to be compatible with the jack on the LPF board.

Does anyone know what type of connectors these are and where I can get some?

Thanks - Jeff - KA9S

Although I have not seen the plug, it sounds similar to what Ten Tec used in
the Omni VI series and probably others. Ten Tec is very helpful, you might
give them a call.

And, when I see the outrageous prices being developed on the auction websites (eg. eBay), I'm very happy to go to hamfests, look at real equipment (up close), ask questions, and I'm happy to dicker over price to mutual satisfaction and without having to go back multiple times to eBay to worry, sweat out the bidding, and maybe end up with a rustbucket PoC, that works less well than advertised (if you get anything more than "The lights come on when you turn the switch").

You have a problem with people? You're probably seeing a lot better example of real human life than if you traveled most of the world (eg. India, China, 3rd world) and see what poverty, starvation, and disease is all about. I have rarely been offended by anyone at a hamfest.

More likely.... to the OP Usenet = Google. Sorta like ham radio = CB,
eh?

I made it over.  I had a nice shopping list, but only found two of the
items I was looking for.  :(  I didn't win anything either which is par
for the course.

Otherwise, it was nice catching up on a lot of friends I know.  I even
made it home before the snow got too deep.

I'll be back next year.

73, de Nate >>

I quit attending the winter St. Joseph hamfest quite a few years ago. The parking around the Ramada (not Holiday Inn, dude...) is horrible and tables are poorly laid out in the atrium area around the indoor pool. Always seems to have lots of ice and snow piled on the parking lot.

One nice thing is you can "sneak" into this hamfest through most of the hotel entrances and bypass the admission table like everyone else does. Kind of makes up for the shitty parking...

The problem with such devices in practice is that they are not very directional, and the power source they require to even get close to doing as you describe makes them impractical for mobile use without one mother of a power generator.

A full-sized RV might be able to mount such a device (called a HERF, or High-Energy Radio Frequency emitter) in a concealed manner, but I don't see any way a passenger car can do so with our current level of technology.

As to the non-directionality: A blast of RF powerful enough to blow out the stereo system in the car you're aiming at would also be powerful enough to blow the engine-control computer in your own vehicle, and that of other vehicles around you. This would cause more than a few cars to come to a sudden halt, including your own, and you could suddenly find yourself in the middle of a multi-car pileup.

Would you care to find yourself paying for several blown-out engine computers when the police investigating the crash find HERF equipment in your car, assuming you could find a way to power it? Not to mention explaining yourself to a whole flock of no-doubt pissed-off drivers?

Speaking as someone who works for our state's highway patrol, I suggest that a more constructive (and far less risky) method for dealing with your audio pest would be to simply note the license number of the vehicle involved, and file a complaint with your local police.

With that said: You are not alone. I've often wished for a way to safely and effectively disable a "Thumpmobile" without causing unwanted side effects. ;-)

Keep the peace(es).

10 Hz is well within the accuracy and stability specifications.

Stability is the key spec. How much does the radio drift in the first 1 hour of warm up?

How do you know the 10 Hz value? How soon after power on is it measured? etc.!

Monte-

I don't know if this will help or not. I found an article in my archives from last June, that gave an address for the manuals for both the 725 and the 725A.

http://www.icom.co.jp/manual/external/transceivers/IC-725.pdf

http://www.icom.co.jp/manual/external/transceivers/IC-725A.pdf

I have not tested the addresses to see if they work.

You will be hard pressed to beat 10 Hz, even if the rig has a TCXO. If you have the capability of measuring it, all you need to do is find the adjustment, let the rig warm up a couple of hours, and adjust it. Let the adjustment stabilize a while and check again. Ceramic trimmer capacitors seem to drift slightly immediately after adjustment.

After several years of trouble free operation I had a strange problem
the other day; it would go "nuts" readout weird and the red TX light
was on, but no RF out. I had to do a reset with the button inside.
Being an older radio my first suspicition was the Lith. back-up batter
was due, but I measure 2.99 v. Assuming it's a nominal 3v battery does
anyone have a though where to go next? I did put it on the bench
powered up. After taking the power away (12v) and returing it a few
hours later it losses memrory. Please either post or email me, below.
My email is a different callsign; if you wish to contact me that way,
please visit:

For Sale Kenwood HTs and Accessories:
TR-2600A 2 Meter HT;
TR-3600A 440 MHz HT;
ST-2 Base Charger/Power Supply;
MS-1 Mobile PS and Stand;
SMC-30 Speaker Mic;
Extra PB-26 Battery.
All equipment is in great shape and works good.
The extra PB-26 Battery does not hold a charge,
but the batteries on the HT work.
Gear is from an estate has not been used in awhile.
Price for all is $150.
Thanks, Charlie Hugg, K5MBX

Com One, a European company best known for its Bluetooth solutions, has entered the North American Market with a very unique product. It's called the Phoenix WiFi/IP radio. It connects to the internet via 802.11b/g WiFi, and plays any audio that streams online in premium sound quality..

http://askwiki.blogspot.com/2007/01/com-ones-wi-fi-ip-radio-launched.html

Good Day!!

WA7YCP-

On one hand, this sounds as if a Phase Locked Loop had become unlocked, which might disrupt the frequency display and prevent transmitting. On the other hand, the lithium battery should prevent loss of memory.

Other radios, both Icom and Kenwood, have 3.6 volt lithium cells. It is possible that your radio will lose memory below 3.0, but I've had them maintain memory when the battery was down to about one volt!

A PLL might go out-of-lock because of loss of the reference frequency (usually a crystal oscillator) or drifted tuning of the VCO. There also might be a low voltage regulator that has low output, often caused by a leaky electrolytic capacitor.

<garbage trim>

And this is relevant to the Amateur Radio Service, how? Exactly? Except as a possible source of further spectrum pollution?

Go find some other newsgroup to spam.

The HF5B is a lite weight beam antenna that covers 10 15 17 12 and 20 meters. Two element with a 7 foot turning radius. Small antenna can be rotated with a good TV rotor. 1200 watt PEP power limit. The wing span is 12 feet. It is on the gound and assembled. 200.00 pickup in east TX or I will break it down and ship it for a price. We can talk about that. A guyed pushup pole will carry this antenna just fine. Great antenna for it's size. Email kw5g@yahoo.com

Dennis kw5g

Hi,

As I am currently looking for a dedicated RTTY modem (as opposed to a soundcard-based setup), I found WO5P's (http://www.wo5p.net/) 'offer of the week'-deal quite acceptable.

'Acceptable' as in 'The price he's asking for one of these units is within my price range' - I don't know anything about this particular model's virtues or vices - which is where r.r.a.e. comes in handy!

When googling the model#, most hits refer back to the abovementioned web shop. It is claimed that it is 'similar' to the HAL ST8000 - anyone know just *how* similar? I know a couple of hams using ST8000s - they're quite happy with their choice. If the 1280 is nearly identical, chances are I, too, will be most satisfied with my purchase.

Also, assuming that a commercial unit is not optimised for 45.45Bd operation @ 170Hz shift - anyone know how simple it is (or is not! :) to modify the unit for such operation? Can the detector filters be tweaked enough for it to be worthwhile, or should I rather look for a dedicated ham unit?

Any input appreciated.

I do...many of my fellow friends who have shops overflowing with "good stuff".

In my own case, I see it as a very slippery slope....one great thing after another can follow you home until the doors to the shop won't shut.

Sometimes...no many times...you just have to say "No".

Your thoughts?

Medical Mystery: Compulsive Hoarders
A Psychological Compulsion to Keep Everything, Even When It Ruins Your Life
By CECILE BOUCHARDEAU

Jan. 16, 2007- - We are all pack rats to some degree. We hoard, collect and buy more stuff than we have room to store.

But what if something in our brains made us incapable of throwing things out? Janie Allocca and Lorraine Brennan both suffer from a psychological disorder called compulsive hoarding -- an urge to hold on to even the most mundane objects, even when they take over their lives.

Watch "Primetime: Medical Mysteries" Wednesday at 10 p.m. ET, and go to ABCNEWS.com during the show to diagnose a real medical mystery.

Lorraine Brennan has been hoarding for nearly 20 years. She lives in a two-story house in Massachusetts with her father, son and fianc=E9e. Most rooms in the house are cluttered, and some are even unusable. The bedroom-office that she shares with her fianc=E9e is overrun with stuff they tried unsuccessfully to get rid of at a yard sale. Lorraine's purse is bursting with junk mail and receipts.

Brennan's hoarding is not only ruining her life, but affecting her entire family. Her son can't bring friends home from school. Brennan and her fianc=E9e have been engaged for eight years, but he hasn't been able to commit to marrying her because of the clutter.

'There's No Place to Sit Down'

Many hoarders are also compulsive shoppers. Janie Allocca has accumulated so much stuff that she uses her own house as a storage facility and lives with her mother.

"I remember collecting, and keeping, and hoarding things since I can remember," Allocca said. "And now I am just living around the piles and piles I need to get rid of."

"I have so much stuff that my house is totally unlivable," she continued. "There's no place to sit down. I can't get to the kitchen. I can't have anyone over for tea even though I have everything for tea. My collecting is taking up the space where I normally would live."

There's a fine line between simple clutter and extreme hoarding. Most hoarders, observers say, are physically incapable of throwing things out. They can't live in, or use, rooms like the kitchen for their intended use. They also experience extreme distress from their condition.

The Brain of a Hoarder

Hoarding is currently considered a subset of obsessive compulsive disorder, but that may soon change. New research is finding that hoarding may be a unique disorder completely separate from OCD.

Dr. David Tolin, director of the Anxiety Disorders Center at the Institute of Living in Hartford, Conn., has devoted his career to studying what goes on inside the mind of a hoarder.

"At the moment, compulsive hoarding hasn't been fully defined by the psychiatric and psychological communities," he said. "One of the things that we wanted to do was to understand some of the brain mechanisms behind compulsive hoarding."

Allocca is part of a study Tolin is conducting to see which parts of a hoarder's brain become active when they are faced with making decisions. She is hooked up to a brain-scan machine and asked to look at pieces of her mail and decide whether she wants them to be thrown out. She then must watch the mail get shredded.

At this point, two parts of a hoarder's brain become active. The brain's orbitofrontal cortex is involved in decision making and causes a hoarder to process this experience as a punishing one. At the same time, the hippocampus of a hoarder actively searches for memories about the object. The hoarder tries to remember the object: what it is and why they saved it in the first place. By contrast, people without hoarding problems just don't think about the object that much.

'A Painful and Effortful Process'

"What we find is that the brain is acting very, very differently when a person hoards," Tolin said. "When the person is trying to make a decision about what to throw away, it seems that the person who is hoarding, is processing this activity as if it is deeply punishing."

"The person who hoards is going through a very, very effortful search of their memory to try to think of as many things as they can about this item before they make the decision," Tolin added. "What this all amounts to then is a painful and effortful process of decision-making, that you and I might take for granted."

There is no cure for hoarding, and there is no medication to treat the condition. Right now, cognitive behavioral therapy is the only way to help hoarders make decisions and deal with their emotions.

Getting Help

In Beth Johnson's "Clutter Workshop" in Hartford, hoarders and clutterers practice throwing out possessions they have grown attached to. Johnson also takes her clients on nonshopping -- or nonacquiring -- trips to teach them not to buy things they don't need.

"I try to help them see the larger picture and how this item won't fit into their life," said Johnson. "If you have a jam-packed house, if you're adding to it on a weekly or daily basis, you're basically defeating yourself."

Dr. Randy Frost, a professor of psychology at Smith College in Massachussetts, focuses on helping hoarders make their homes clutter-free.

"One of the things we know about hoarding is that the beliefs people have about their possessions are so powerful, that it's very difficult for them to get out of this behavior," said Frost, who is also author of the upcoming book "Buried in Treasures." "If the person throws something away and experiences distress, and does it again and again, eventually, they won't have that extreme emotional response, throwing something away."

Frost held a one-on-one session with Brennan to see if he could help her. After a few hours, she was able to throw away receipts and a few pieces of junk, but, as with most hoarders, there is still a long road ahead.

One major motivator for Brennan is the possibility of losing her fianc=E9e if she doesn't clean up her home. When asked if she thought he would really leave, Lorraine said, "I don't want to find out. I don't want to end my relationship. I want to do better. I want to make it work. I don't want to live like this anymore. I really don't."

Dr. David Tolin and Professor Randy Frost are co-authors of a self-help book called "Buried in Treasures," to be published on February 5th.

I have this problem in only one respect: scraps.

I just cannot bring myself to throw away a beautiful piece of hardwood
even if it is a scrap, even if it is too tiny ever to be used for
anything.

My scrap bin overfloweth...........

You are not aloneth....the reason why I copied rec.woodworking on this post is that many of my fellow woodworkers are hoarders in disguise.

Estate auctions of woodworkers always have tons of wood scraps neither touched.

I too hoard scraps, but every once in a while I tend to just sort them
out and what I haven't used or plan to use in the future, gets made
into kindling for our wood stove.

<snip>

I received some great training in this regard.

As a matter of company policy, once a year had to go thru the files
and throw away anything over one year old with tax records and
engineering documents excepted.

After completing this task, had to sign off that you actually had done it.

Was told the lawyers were the reason for the policy.

Something to the effect that if it doesn't exist, it can't come back
to haunt you.

Had customers with similar policies.

Sort of sets the mood not to hoard things.

Also, a move every 5 years or so, gets rid of a lot of "stuff".

Lew

And the fact you can actually part with above mentioned scraps proves you're just an average pack rat...a "real" hoarder would have a panic attack trying to sort through or throw away the scraps.

Then again...I've seen what appear to be packrats on TLC's Clean Sweep who break down sobbing over letting go of some pillow they've had since childhood. But they do it....eventually.

Don't say that. A friend used hardwood scraps as backing for his handmade trophies. One of a kind stuff. You might offer yours to a trophy maker if you aren't interested in getting into the business. Or turn them into individual bookends. Or offer to some woodworking type at a craft show.

My hoarding problem is this. I have a lot of valuable stuff left over from my ebay dealings. Like little T6061 aluminum plates and bars for example. Or super nice strong stainless painted steel handles. Super high quality. I may use a few "one day". In fact I will use some on my trailer project. Or a few pulleys. But, despite being valuable, they are not economical to try to sell them. Too little money, too much hassle, and quite possibly they would not sell at all. But I cannot throw them away in good conscience.

i

Yeah, very common.

> In my own case, I see it as a very slippery slope....
> one great thing after another can follow you home
> until the doors to the shop won't shut.

True, when I was building the house, I'd bring back quite a bit of stuff from the dump. Some got used right away, particularly discarded seedling trees etc, other stuff got used later, particularly scrap wood and steel etc. Other stuff never did get used like the VW beetle transaxel etc that I considered turning into a dune buggy etc and never did get around to. Tried to drag it out the front for the most recent collection day but it was too heavy to move easily so I took the easy way out and gave up till next time.

> Sometimes...no many times...you just have to say "No".

> Your thoughts?

I dont bother to get rid of most stuff that dies. I've still got the hot water service that died, because the big white metal square case is decent metal for making letterboxes etc.

Still got the washing machine I last used 35 years ago, mainly for the decent motor and pump, should bin that on the next collection day, its a bit hard to get out tho.

Still got the smaller upright freezer that is uneconomic to repair, just because it seems such a waste of what is a very decent little cabinet thing, might one day get around to putting a beer brewing barrel into for easier heater control in winter. I currently put a big wrap around insulating foam pad around the barrel with a heater belt with monster zip ties initially and once its bottled or when I have two barrels brewing, I have a fan heater in the smallest room in the house that doesnt get used as a toilet since I have two of those.

LOL....I know of several companies that are now spending millions of dollars to recreate a product they had but lost the recipe to because they purged their files.

The retirees that they have had to rehire at expensive contractor rates are very appreciative of the management's stupidity to enforce a "clean desk" policy. They are very happy to participate in the "purge".

Of course those responsible for this stupidity received promotions for their ideas.

Langley Collyer: The Mystery Hoarder Of Harlem
Fred Penzel[1], Ph.D

On March 21st, 1947, at 8:53 a.m., the New York City police department received a phone call from a man giving the name of Charles Smith, notifying them that he believed a man was dead inside a decaying building on Fifth Avenue in Harlem. Officers arrived on the scene by 10 a=2Em., and cordoned off the house in order to hold back the crowd that had gathered. The police removed an iron grill-covered basement door from its hinges, only to find the entrance completely sealed off by a solid mass of debris. Thus was thrust before the public one of the best-known and most mysterious compulsive-hoarding cases of all time.

Compulsive hoarding is a form of obsessive-compulsive disorder (OCD), a neurobiological condition, most likely genetically based. OCD comes in a wide variety of forms, of which hoarding is only one. Compulsive hoarders may collect only certain types of things, or they may indiscriminately save everything. We are not talking here about collecting things that are valuable or important such as art, coins, or stamps.

Hoarders tend to save things of little or no value...

Hoarders generally tend to save things that are of little or no value, or if the things they save do have real value, they tend to save them in ridiculously larger quantities than would ever be necessary. One of the main obsessive thoughts that causes sufferers to do this is their worry that if they throw a particular item away, it will be lost forever, and they may one day be in need of it in order to be able to use it, to be able to remember it, or do something connected with it.

They seem to have difficulty discriminating between what is or will be useful, and what is not. Some hoarders can freely admit that the things they are saving are currently broken or damaged and unusable. They will stubbornly insist, however, that they will someday repair or refurbish the items and either make use of them or give them away.

Throwing away something is seen as being irresponsible...

Another reason for hoarding resembles the type of thinking seen in hyper-responsible obsessions. It is the idea that each thing they save and/or repair might be useful to others (rather than themselves), and that the hoarder would be responsible (and therefore blameful and guilty) for another person not having this vital item should the need arise. They may also rationalize that what they are doing is actually "recycling," and are performing a community service by conserving resources. Throwing away something that could possibly be reused is seen as being highly irresponsible. In actuality, there really is no need for what they have saved, there is no one to give the items to, and the only result is that the hoarder is burdened with a house full of junk.

Some of the things most commonly saved include newspapers, magazines, lists, pens, pencils, empty boxes, pamphlets, old greeting cards, junk mail, old appliances, outdated books and even assorted labels, string, rubber bands, plastic containers, bottles, and bottle caps. In the most extreme cases, people have been known to save such things as empty matchbooks, used tissues, old cigarette butts, bird feathers, old cars, discarded paper cups, used aluminum foil, paper towels, lint, and hairs. Some of these sufferers will even rummage through other people's trash, and bring home obvious junk that to them, seems quite useful or repairable.

Accumulate things create fire or health hazards...
Compulsive savers can accumulate large amounts of things, creating storage problems and fire or health hazards. Their houses can take on the appearance of having been ransacked, with floors waist-deep in trash and debris, rooms filled wall-to-wall with overflowing paper bags and cardboard boxes. Many sufferers can only make their way around their homes by creating aisles around and through the trash. Problems with municipal authorities are not uncommon, and hoarders are sometimes evicted or charged with violation of zoning or public-health laws. Ironically, the majority of people who save things compulsively rarely use or look at these things. Their security comes from merely having the things around "just in case" and in not having to make what seem like difficult decisions about what to discard.

Let us now return to our story.

The Collyers were part of one of New York's oldest families...
Its main figures are two brothers, Homer Lusk Collyer (b. Nov. 6th, 1881), and Langley Collyer (b. October 3rd, 1885). The Collyers were part of one of New York's oldest families, a branch of the well-known Livingstons. Their ancestors had come over to America on the ship "Speedwell" in 1664, about a week after the Mayflower. The family had been members of the congregation of Trinity Church since 1697. Their father, Dr. Herman L. Collyer was a successful and renowned gynecologist, and his father, William Collyer, was said to have been one of the leading shipbuilders in America. In 1909, Dr. Collyer moved his family from Murray Hill to a fine upper-middle-class home in Harlem. It was a three-story brownstone located at 2078 Fifth Avenue (at 128th Street). Beyond his fame as a physician, the doctor was known to be a bit eccentric, paddling a small canoe to work each day at City Hospital on Blackwell's Island in the East River. He would subsequently paddle home at the end of his day, and then carry the boat on his head back to his house.

Dr. Collyer's two sons seemed destined for successful lives of their own. Both attended Columbia University, where Homer earned a law degree, and his younger brother graduated with a degree in mechanical engineering and chemistry. Homer went on to practice admiralty law, but Langley, so far as is known, never held employment, and spent his time playing the piano. He is reputed to have won prizes as a concert pianist, but this cannot be verified. Perhaps Langley's inability to establish a career was an early sign of personal difficulties he may already have been experiencing.

In 1917, the brothers had their telephone disconnected...
It was probably a warning of things to come when in 1917, the brothers had their telephone disconnected, after being billed for long distance calls they claimed to have never made. This may have been the beginning of what would become a growing isolation from the outside world. Six years later, in 1923, Dr. Collyer died. Several years prior to his death, for reasons unknown, he had moved from his Fifth Avenue home to

one at 153 West 77th Street. His sons remained at the family home with their mother. It is possible that a family breakup may have occurred.

Life seems to have taken an abnormal turn for the two brothers in the year preceding the death of their mother in 1929. It appears that their gas was shut off in 1928, and they also seemed to have given up the convenience of running water and steam heat, and began using kerosene to light their home and to cook with. Water was obtained from a public fountain four blocks from their home. This was all clearly out of step for people of their education and social status.

No one was ever permitted to enter their house...

Despite all this, nothing appeared out of the ordinary to those in the outside world. The brothers were said to be courteous, cultured, and shy. The only sign that something might be amiss was that no one was ever permitted to enter their house. Around 1928, Homer worked for another attorney, John R. McMullen, who later became the family legal advisor. Homer next worked for City Title Insurance doing research in the New York City Hall of Records. He was described, at the time, as being courtly, and dressing in 19th century attire, presenting a rather Victorian appearance. He was said to resemble a gentleman of the 1880's.

In 1932, Homer purchased a building across the street at 2077 Fifth Avenue for $8,000. He planned to divide it into apartments and to rent them. This plan was never realized, as he suffered a stroke in 1933, becoming blind as the result of hemorrhages in both of his eyes. With one exception, he was reportedly never seen outside of his home again. Langley then gave up his music to take on the job of nursing his brother back to health. No physician was ever consulted. Langley apparently believed that the cure for his brother's blindness was for him to eat 100 oranges a week, and to keep his eyes closed at all times, in order to rest them. The brothers possessed a large library of medical books, and it would seem that Langley felt he had the information and knowledge necessary to treat his brother.

An intact Model-T Ford was discovered in the basement...

At some point in the 1930's, the West 77th Street home where their father had lived was sold, and the new owner, a Mrs. Peter Meyer, discovered an intact Model-T Ford in the basement. It is not clear how it got there. Mrs. Meyer is said to have paid a workman $150 to disassemble the car and put the pieces in the street. This somehow came to Langley's attention, and for reasons known only to him, he carried the car piece-by-piece back to the basement of his Fifth Avenue home. It would appear that along with the loss of their other utilities, the brothers had no electricity, as Langley apparently tried to connect a generator to the car's engine in order to provide power, but was unsuccessful.

The brothers eventually came to the attention of the general public when they were mentioned in an article written by Helen Worden, a reporter for the World-Telegram. A real estate agent named Maurice Gruber was attempting to buy some farmland in Queens that belonged to the brothers. Their refusal to respond to his letters or to answer the door when he tried to see them in person resulted in Gruber keeping a vigil at their home. In her article, Worden referred to Langley Collyer as "the mystery man of Harlem," and included in it, a whole range of sensational rumors that had been circulating about the brothers and their home. It was said to contain all sorts of rich furnishings, a vast library of books, and huge amounts of money that Langley would not trust to banks.

The brothers were depicted as wealthy hermits...

Worden, herself, kept a watch on the Collyer's home, and finally caught up with her elusive quarry one night, as he was leaving the house to go on what was one of his regular after-dark shopping trips. She questioned Langley about a boat (his father's) and the Model-T Ford said to be in their basement. Langley confirmed these stories. Rather than clearing up the mystery, Ms. Worden's article seemed to have only increased the speculation and rumors about the brothers, and during the 1930's other articles were written about the brothers in the New York papers. The brothers were depicted as wealthy hermits, living in a storehouse of money and valuables. People visited the house, banging on the doors or attempting to see them, while neighborhood children committed various acts of vandalism that included breaking windows. As windows were smashed, Langley systematically boarded them up instead of replacing them.

Throughout this time, and most likely the result of a case of compulsive hoarding, Langley was hard at work filling the once attractive home with huge amounts of newspapers, cardboard boxes, barrels, metal cans, tree branches, scrap metal, and other assorted trash. In the case of the newspapers, it is said that he believed that his brother Homer would someday regain his vision, and would then want to catch up on the news he had missed. He was known to prowl the streets at night, gathering items from curbside trash piles and bringing them home. No one knows how many years he had been actively engaged in this collecting. His foraging resulted in all three floors of the house being filled with literally tons of things he had collected. Perhaps it was his knowledge of engineering that enabled him to arrange the boxes and packing cases in interlocking arrangements that concealed a maze of tunnels that only he knew.

The home became a fortress with booby-traps...

Langley was said to harbor fears of being burglarized, and there had, in fact, been several attempted break-ins over the years by those perhaps lured by the tales of stockpiled riches. The home became a sort of fortress for the brothers, with booby-traps constructed of great piles of debris rigged with the aid of trip wires to fall on unsuspecting intruders. This, of course, only served to increase the brothers' growing isolation. If their goal was to keep the world out, they were succeeding.

Although the brothers were by no means poor, Langley is also said to have regularly rummaged through garbage cans seeking food. He went begging at butcher shops for scraps, and was known to have walked as far as Williamsburg, in Brooklyn to purchase stale bread at the lowest possible cost. The Collyers again appeared in the newspapers in April 1939, when, armed with a court order, a city marshal together with representatives of the Consolidated Edison Company entered the brother's two fifth avenue buildings and removed the gas meters, which had been in a state of disuse since 1928. A crowd said to be as large as 1,000 people gathered outside their home to see what was happening.

Homer's last appearance outside the house is said to have occurred a number of months later on January 1st, 1940. Sgt. John Collins, a city policeman from the 123rd street station who was familiar with the Collyers, spotted the two brothers carrying a large tree limb from across the street into their basement. Langley guided the branched end, while Homer held up the other end.

Not paying taxes was a symptom of their reclusiveness...

Although the brothers did everything they could to avoid public scrutiny, it had its own way of intruding into their solitude. Ironically, it was their reluctance to encounter the outside world that continually brought the world to their doorstep. It appears that not paying taxes and other bills was a symptom of their reclusiveness, and it caused them no end of trouble. The most highly publicized example occurred in August of 1942, when the Bowery Savings Bank foreclosed on a mortgage that amounted to $6,700 plus interest (no interest had been paid since 1940).

After going to state Supreme Court, the bank obtained permission to evict the brothers from their home. The very same day, however, the Collyer's attorney, John R. McMullen, met with bank officials with an offer by his clients to repurchase the property. As the house was seen to be in very poor condition, it appeared that the Bowery Savings Bank was not all that eager to repossess it. Mr. McMullen had never actually been allowed in the brothers' house, so instead, Langley, who almost never appeared in daylight, had walked all the way to his attorney's office on Park Row to discuss the matter. Mr. F. Donald Richart, vice president in charge of real estate for the bank, consented to give the brothers "a generous amount of time" so that they could work out the details of the repurchase.

Growing rumors that Homer had died...

There were growing rumors on the street, around this time, that Homer had died and that his body was still in the house. Sgt. Collins of the 123rd street station (mentioned earlier), took it upon himself to look into the matter. He encountered Langley, and somehow got his permission, despite some reluctance, to enter the house through the basement door. In a surreal journey through a labyrinth of tunnels in the trash and homemade booby-traps that lasted a half hour, Langley led the officer to the bedroom where Homer was to be found. What happened next is told in Sgt. Collins own words. "I switched on my flashlight, and there was Homer sitting up like a mummy. He was on a cot, a burlap bag beneath him and an old overcoat on the foot of the cot, and he spoke directly to the officer. "I am Homer Collyer, a lawyer. I want your shield number. I am not dead. I am blind and paralyzed." Langley subsequently made a complaint to the police department about the incident, but no action was ever apparently taken on the matter.

In the matter of the Bowery Savings Bank, it seems that no repurchase offer was ever worked out, so in October, Supreme Court Justice Bernard Botein signed an order permitting the city sheriff to evict the brothers from their brownstone. This same judge's decision, which had been issued in August, was now about to be carried out. The bank, still trying to not have to resort to force, repeatedly mailed eviction notices to the brothers, who never responded.

The Bowery Savings Bank was not to be put off indefinitely. As the new owner of the building, they were required by the city to make repairs to the property according to the city's building and sanitary codes. At the end of September, they dispatched a crew of workmen to the house to begin carrying out the repairs that had been ordered by the Department of Health. A number of police officers and patrol cars were sent to the scene to manage the inevitable crowd that had gathered, as it always did whenever any activity took place at the Collyer home. As the workmen went about repairing a falling stone cornice, replacing missing window panes, and removing piles of junk from the rear of the property, Langley Collyer called out to them from an upper-story window, demanding to know by what right they were trespassing on his property. The contractor was then forced to stop work and obtain a copy of the city order, in order that the repairs might continue.

The city sheriff carried out the eviction order...
On November 19th, following the brothers' repeated refusal to respond to various notices, the bank requested that the city sheriff carry out the eviction order and enter the house by force, if necessary and remove the brothers. In short order, at 10 o'clock, there showed up at the Collyer's door two deputy sheriffs, Herman A. Murray and Gillespie Anderson, police captain Christian Zimmer of the 128th street police station, Dr. Marshall Rose, sheriff's physician, John Redfield of the Bowery Savings Bank, and Joseph and Herman Cohen, a father and son, respectively, who were both locksmiths. Mr. McMullen, the Collyer's attorney met them there. The group took turns pounding on the door for over an hour, but the only answers were echoes. A crowd collected on the sidewalk, hoping to get a glimpse of what was going on at the "haunted house," as it had come to be known in the neighborhood.

The locksmiths then tried for another hour, in vain, to force the lock on the large wooden front doors, but were unsuccessful because of all the rust and corrosion. Going to the rear of the house, they were able to remove an iron grille-covered door leading to the basement with the help of the two deputies. Here, they found themselves stymied again, as they found their way barred by a mass of wire netting, behind which was a solid mass of crates, barrels, and large tin canisters from floor to ceiling. Seeking another entrance, they next moved on to another rear door, and tore away its rotted boards, only to find a further wall of garbage cans, trunks, crates, and pieces of rusted iron. Breaking in yet another rotted door next to this one, they were met with a similar obstruction.

Covered with dust, and feeling frustrated, the team returned to the front of the building to form a new plan of action, and decided to now make their way into the building via a window. One of the locksmiths, Joseph Cohen, swung up from the top of the front stoop and made his way to the ledge of one of the building's high north windows, where he forced open the shutters. He then broke a windowpane with a hammer, and climbed in through the now empty frame. His son Herman stood outside the window on the ledge and peered in at his father, who by this time was half-choked with dust.

The room was filled to overflowing...

As with the other parts of the house encountered thus far, the room was filled to overflowing with various and sundry items - heaps of old sheet music, gilded picture frames, Christmas ornaments, broken plaster cherubs, piles of books, garden baskets, etc. Joseph Cohen finally managed to work his way downstairs to the front entrance where he and deputy Murray were able to open a path near the door. Clouds of choking dust enveloped them, making the going difficult, and breathing an effort. They eventually opened a parlor door and made it into a hallway where they encountered further barricades. Suddenly, they were greeted by a weary voice from out of the gloom, asking, "What is the meaning of this?" Deputy Murray replied, "I have an eviction notice." Langley then asked him, "Is Mr. McMullen here?" McMullen, who had by now worked his way to the barricade called out to his client, "They will put you out, Mr. Collyer, unless your keep the agreement." Langley replied, "Do what you think best." Following his attorney's advice, Langley then borrowed a pen from the deputy, and signed a check for the full amount, thus ending the invasion.

But the Collyer's troubles were not yet over.

The IRS was now pursuing Homer for income tax arrears...

They came in for some further unwanted attention in February 1943, but this time from the Internal Revenue Service. The IRS was now pursuing Homer for what it claimed was $1900 in income tax arrears plus interest that had accumulated over the previous twelve years. Homer was notified that unless this sum was promptly paid, the house he owned at 2077 Fifth Avenue would be sold at auction on February 3rd. This was the building across the street he had purchased with the intent to divide into rentable apartments. The ever-patient Mr. McMullen hoped his client would come through at the last minute, as had happened previously, although the attorney had been unsuccessful in his attempts to contact the brothers.

On the day of the auction, the IRS representatives waited for over an hour beyond the scheduled auction time, and finally, the property was put up for bid. When no bids were offered, and with Mr. McMullen present, the government took possession, although it was not eager to do so due to the poor condition of the property. It was so rundown, that it hardly seemed worth the effort. Beyond the building being of little worth, there were also the problems of the cost of the auction itself, not to mention the $3,000 in back taxes on the property owed to the City of New York that had been unpaid since 1938. According to the rules, the government would have to hold onto the property to allow Homer the chance to pay what he owed and get his property back. He never paid, and it does not appear that the government ever went any further in the matter of taking possession of the building, as will be seen.

Over three years later, the Collyers once again found themselves in the news.

The reclusive Langley refuesed to cooperate...
On July 23, 1946, two police officers, Daniel Pesek and John Killoran, while on radio car patrol, heard noises coming from 2077 Fifth Avenue. Upon further investigation, the officers discovered two men stealing plumbing and electrical fixtures from the building. The two patrolmen tussled with the vandals, capturing one of them, a homeless man named George Smith, aged 25. Officer Killoran hurt his leg when he fell through a hole in the floor. The officers then attempted to contact Langley in order to get him to swear out a complaint against the thief, but speaking to them through his locked door, he refused to do so. Despite his lack of cooperation, Langley was named as the complainant, and notified that if he did not appear in court, the city would issue him a subpoena. He still refused to cooperate, but after officer Pesek tried several times to serve him with the subpoena, he relented. It seems that time and again, only the threat of legal action could pry loose the reclusive Langley from the decrepit building he and his brother called home.

On July 27th, dressed in turn-of-the-century garments, he appeared in the city's Felony Court as complainant against Smith. What was particularly unclear about all this was that technically, the Collyers no longer owned 2077 Fifth Avenue. Langley clearly did not accept all this, and prior to signing the complaint, he stated, "My invalid brother, Homer Lusk Collyer, and I still own that house and we have the keys to it." He added, "The government seized the property on the contention we did not pay income taxes, but we are going to sue and get that property back, because the government can't demand income taxes from us when we had no income." The brothers had, in fact, never surrendered the keys to the building. He went on to relate that this was the third incident in which he had had to go to court to swear out a complaint against criminal intruders at his home.

The brothers owned two land parcels in Queens County...
The last time either of the Collyer's was seen alive, was the result of yet another tax problem with New York City. It seems that the brothers owned two land parcels in Queens County, which they had inherited from their father. The city had wanted this land for new streets and other purposes, and Langley, together with Mr. McMullen, had a meeting about this with the city's corporation counsel the previous October. After Langley refused two summonses to testify before Supreme Court Justice Charles C. Lockwood, the land was condemned by the city, and the brothers were awarded $7500, which was substantially less than its appraised value. Unfortunately, they would see none of this award, in

any case, as the city claimed the brothers owed it $27,000 in back taxes. Interestingly, a news article about this in the New York Times mentions that the brother's only regular means of contact with the outside world was a crystal radio set.

Which brings us back to the beginning of our story on the morning of March 21st, 1947, with the police receiving the phone call from the mysterious Mr. Charles Smith.

An officer was was unable to open the front door...
The police had received a number of such calls over the years, but as usual, they were obliged to respond. An officer was dispatched to the scene, but was unable to open the front door. He then put out a call to Police Emergency Squad 6, which arrived on the scene at 10:00 a.m. They began by cordoning off the Collyer's house in order to hold back the crowd of curious onlookers, which grew as large as 600 people. The officers began their search by using crowbars and axes to try to force an entrance into the house. They broke their way through an iron grille-covered door to the basement in the front of the house, but as had happened in the past, they immediately found themselves confronted by the usual floor-to-ceiling wall of crates, newspaper, furniture, and odd pieces of junk.

Officers found the emaciated body of a white-haired man...
For their second attempt to gain entry, the officers obtained ladders from the Fire Department and tried the windows on the upper floors. Unfortunately, many of the shutters on the windows couldn't be opened, and it wasn't until 12:10 p.m. that a patrolman William Barker was able to make his way through a second story window. Patrolman Barker was not seen for several minutes, and on his return to the window, called to his fellow officers, "There's a DOA here." In response, Detective John Loughery made his way up the ladder in order to view the body, as other officers began to batter in the wooden front doors with axes. They were again faced with another massive obstruction of neatly tied bundles of newspaper, as well as cardboard boxes filled with assorted contents. Although they tried to tear down the wall of debris, they were forced to admit defeat. Meanwhile, Detective Loughery related what he had seen - the emaciated body of a white-haired man dressed in a tattered gray bathrobe, sitting upright, and tentatively identified as Homer Collyer. The medical examiner, Arthur C. Allen, arrived at 3:45 p.m., and declared that the individual had been dead for approximately ten hours.

The next order of business was to locate Langley, who was nowhere to be found on the premises. It was reasoned that if he were within the house, he would have made an appearance by this time, as he usually did. Police were perplexed about how Langley was able to enter and leave the building, but neighbors stated that he regularly entered and left on his daily shopping trips via the front basement's iron-bound door. After their own struggle to enter, the officers refused to believe that this was possible.

The entire house was packed with debris of various kinds...
According to the New York Times, the entranceway past the basement door

contained "... an old stove, several umbrellas, numerous packages of newspapers, a gas mask canister, an old stove pipe, and a broken scooter." There were also numerous rats seen darting around and through the piled trash. An inspection of the rest of the premises through various windows and around the second floor where they had entered revealed that the entire house was packed with debris of various kinds. It appeared that the building was riddled with a maze of tunnels through which Langley had moved, pulling bales of newspaper in behind him, to prevent intruders from entering. The police also found tin cans and piles of heavy debris wired together to form booby traps, in which the cans would sound an alarm, and a mass of junk would fall on the unsuspecting invader.

.=2E.newspapers lying around that dated back to 1915.
Homer Collyer's body was taken away in a body bag to the police van that would transport it to the morgue. An autopsy was to be conducted to determine the cause of death, although foul play was not suspected. The crowd, milling around on the sidewalk hoping to see what was going on inside, and trading stories about their unusual neighbors, and the fabled wealth that was rumored to be hidden in the house. Some believed the numerous cardboard boxes that filled the house were stuffed with cash. As they searched further, police found newspapers lying around that dated from as far back as 1915. Strewn everywhere were such things as hats, boxes of Christmas cards, a folding chair, a broken sled, and automobile seat, part of a piano frame, etc.

The police were careful to put everything back in place, including the materials they had removed to be able to enter the building. They then boarded up the house at 5 p.m., at which time, Attorney McMullen arrived on the scene. He took charge of all papers, notes, and letters discovered there by the police, and stated to the press that he was sure his elderly client would soon be in touch with him. He also quoted Langley as having said that they were entitled to live their own lives.

No one had any idea of where Langley might be found...
The next day's papers puzzled over the missing Langley. No one had any idea of where he might be found, with the exception of Mr. McMullen, who told reporters, "Your guess is as good as mine, but I think he is in the house, myself." Detectives from the 123rd street station thought that he might still be out on one of his shopping trips to Brooklyn. These were sometimes known to last as long as twenty-four hours, because he made the trip on foot. Deputy Inspector Christopher Salsieder announced that if Langley did not show up by 1 p.m. on March 24th, a missing person's alarm would be issued. In the meantime, it was decided to not perform an autopsy, as the cause of death was believed to be the result of "ateriosclerotic heart disease," which, it was said, could be determined by external examination. Later reports seem to indicate, though, that an autopsy was finally performed.

Of course, the usual publicity-seekers were quick to come out of the woodwork.

William Rodriguo, a sometime Democratic politician from Harlem, came forward, claiming to be the "Charles Smith" who had phoned the police, touching off this latest incident. He stated that he had used a false name due to not wanting to get involved, but had later changed his mind. He added a further touch of mystery to the story, telling police that he had been told of the Collyers' deaths by an unknown man he had met in front of their house the morning of his phone call. The next day, on the 23rd, the crowd outside the decaying brownstone had grown to several thousand people. Langley had still not appeared, and the curious were hoping for a glimpse of him, or failing that, his remains.

A stream of autos crawled by the building...

One man showed up with a shovel and began digging in the building's front yard, but was removed by the police. A stream of autos from as far away as New Jersey and Connecticut crawled by the building in a regular procession. The daily papers thirsted to know about the contents of the house, rumored for years to contain numerous grand pianos, a Model T, and a boat.

Inspector Joseph Goldstein of the Tenth Division speculated that a thorough search of the entire house would occupy a police emergency squad for three weeks. They were to begin work later that day, following an inspection by the Department of Housing and Buildings and the Board of Health. The strategy would be for police officers to begin with a search of the top floor, dumping the contents into the backyard. It was decided that the items removed would not be taken away until the public administrator or an heir of the Collyers gave approval. A relative of the brothers, William Collyer of Yonkers, turned up at the house that day, relating to reporters that his mother and sister had visited the brothers in 1928, and noted that the house, at that time, contained no furniture, but was already filled with quite a bit of debris.

The clearing of the building began the next day on the 24th. This first stage of the operation, the clearing of the top floor, began that afternoon, headed by Inspector Goldstein.

Officers broke open several skylights to enter the building...

After Mr. McMullen declared Langley missing at 1:15 p.m., and after officials from the two city departments declared the building safe to enter, the officers of Emergency Squad 6 began their task by sending over a ladder from an adjoining rooftop. After climbing across, they broke open several skylights and a roof trapdoor, through which they entered the building. Once inside, they smashed windows in order to get some badly-needed ventilation. A large crowd, whose numbers now ran as high as 2,000 watched the spectacle from the street, windows, fire escapes, and rooftops, cheering each time a sizable object was thrown into the yard below. Among these items were a gas chandelier, the folding top of a horse-drawn carriage, a rusted bicycle, a child's chair, an automobile radiator, dressmaking dummies, a sawhorse, a rusted bedspring, a kerosene stove, a doll carriage, a checkerboard, and numerous bundles of newspapers. A team of sixteen men inspected each object as it was thrown out, looking for valuables and important papers to be saved. They found enough ledgers, correspondence, and legal documents to fill eight crates which were taken to the West 123rd street station to be looked over by someone from the public administrator's office.

Over 2,000 dust-covered volumes and five pianos...

At 3 p.m., Inspector Goldstein called off the search for Langley for that day, and sent his men to check out the basement. They found the walls lined with ceiling-to-floor bookcases containing over 2,000 dust-covered volumes, among them numerous books on the law and engineering. Reporters and a family member were allowed to have a look around, and among the newspapers and cardboard boxes there were as many as five pianos. With much effort, the officers cleared a path to a stairway, but were unable to open up the stairway itself. While clearing this area, they stumbled on a generator, which may have been used to produce electricity.

Some of the debris removed was piled in the front areaway, and included a kiddy car, three women's hats, a box of curtain rings, a green toy bus, some lead pipes, and a Metropolitan Opera program from 1914. At 4 p=2Em., the Emergency Squad forced their way into the first floor. Aided by searchlights powered by a portable generator, they made out a mahogany mantelpiece containing a large cracked mirror resting against a wall, an old RCA radio in a corner, and a large pile of furniture covered with dust standing in the middle of the floor. The windows were covered with a filthy green drapery.

At this point, the search was ended for the day, with the police boarding up the windows, and piling the collected debris in a section of the yard surrounded by a tall iron fence. Langley had still not been found, but the police were determined to return and finish their search.

March 26th, still no sign of the missing brother...

The following morning at 10 a.m., the officers resumed their search. It was now March 26th, with still no sign of the missing brother. The day was particularly windy, blowing some of the old newspapers down the street, where they were snatched up by the ever-present crowd as souvenirs. The overwhelming mass of debris the police removed from the house consisted largely of old newspapers, cardboard boxes, magazines, and pieces of wood. Among the other assorted things uncovered that day included a nursery refrigerator, a beaded lampshade, a box of toy tops, and a toy airplane.

In the basement, they found the chassis of the fabled Model-T Ford, thus confirming one rumor. Important documents and papers continued to turn up, and these were removed to the 123rd street station. Any useless material that could be combustible was carted away in two truckloads by the Department of Sanitation, to be burned in its incinerators. The first load weighed 6,424 pounds, and the second a bit less.

A further maze of tunnels and several new booby-traps...

One rumor that was put to rest was the existence of a secret basement tunnel connecting the brother's two buildings. In addition to discovering a further maze of tunnels, several new booby-traps were found, consisting of things such as cans, or large tree limbs (as large as twenty inches in diameter), set to drop on unwary intruders.

The police were becoming increasingly convinced that Langley was not to be found alive on the premises, but they were determined to continue their search of the entire house. Inspector Goldstein stated that the work would continue, "... until we are sure Langley Collyer is not in there, dead or alive." One theory was that his body might yet be found stuck in one of the booby-trapped tunnels. Assistant Chief Inspector Frank Fristensky, Jr. told the press that it would take them several more days before they had a clear picture of what the interior of the building contained. Attorney McMullen had already become concerned about the brother's tangled finances and their numerous bank accounts. He estimated their worth to be in the six-figure range, not including the real estate they owned.

Work continued on the 26th, much as it had the day before.

The Emergency Squad began work at 10:00 a.m., halting briefly at noon when some confusion arose over whether proper legal authorization for their work had been obtained.

.=2E.searchers tossed large amounts of material from the windows.
At 2:30 efforts to clear the top floor resumed, with the searchers tossing large amounts of material from the windows. Relatives watching the operation from the street complained to the police that they were being less than careful in discarding things, and risked discarding items of value, as well as important papers. This resulted in the officers being somewhat less energetic in clearing things out. One particular item that attracted attention was the discovery of a .22 caliber pistol and holster, along with ammunition of various types. This was turned over to the Police Ballistics Bureau.

A report submitted to the public administrator of New York County by Deputy Chief Inspector Conrad Rothengast stated that it was believed that Langley Collyer was dead based upon the facts that the brother had never been away from his home for more than twenty-four hours, and that the death of Homer would certainly have been cause for him to have at least contacted his attorney or his relatives.

The next day, the New York Times reported that the surrogate, a Mr. James A. Delahanty, was unable to appoint Francis J. Mulligan, the public administrator as temporary administrator of the Collyer brother's estate. While everyone in the case agreed that Langley Collyer was most likely dead, Mr. Delahanty felt that definite proof was required for such a move to be made. Various affidavits from such people as John R. McMullen and William Rodriguo were due to be submitted to Mr. Delahanty.

March 27th, still no trace of Langley...
As of the 27th, police searchers still had been unable to turn up any

trace of the missing Langley, although they did turn up a cigar box containing three more revolvers, a sixteen-gauge shotgun, a .22 caliber rifle, a .30 caliber rifle, a two-foot long bayonet, and a three-foot long cavalry saber. Near the spot where Homer's body had been discovered, they found another old cigar box containing thirty-four bank books from various savings banks. Eleven of them had been canceled, and they showed savings totaling $3,007 dollars.

By March 28th, the police were having their hands full following up on numerous tips they were receiving, concerning the whereabouts of the missing Langley.

Officers were dispatched to the Borough Hall-Jay Street Station in Brooklyn after a conductor reportedly saw him board the subway there. They also searched a group of boarded-up summer hotels and bungalows in Asbury Park, New Jersey; a place where the brothers had spent time between 1901 and 1907, and where it was thought Langley might be hiding.

In the meantime, surrogate Delahanty finally appointed Francis J. Mulligan as temporary administrator of Langley's estate, in addition to being made administrator of Homer's. Following these appointments, police halted their intensive search for Langley in the Fifth Avenue home, and decided, instead, to begin shipping the contents to an unused school building at 67 Rivington Street on the 31st, where they would be inspected for valuables and important papers. Items of obvious value were to go to this location, while things that were obviously trash would be removed by the Department of Sanitation.

Following leads in New Jersey...

On the following day, Mr. Mulligan, as administrator, visited the city morgue to claim the body of Homer. Funeral arrangements were set for April 1st, to be held at Cypress Hills Cemetery in Queens, where the family owned a plot. Police were still hard at work tracking down various leads. Their latest took them to New Jersey. A waitress in Tuckerton reported to police that she had served food to a customer who appeared to fit Langley Collyer's description, which by then, had been widely distributed. She added that the man had subsequently boarded a bus headed for Atlantic City. Police in that city then proceeded to make a sweep of hotels and rooming houses.

Police recommenced their search on the 31st as planned, beginning at 8:30 in the morning. It appeared that they would be able to clear about one room per day, and there were an estimated twelve rooms in the building. The workforce at the house now consisted of two detectives and five laborers hired by Mr. Mulligan. Their work concentrated on the front basement room, which was found to hold 3,000 books, numerous telephone directories, a Steinway piano, a horse's jawbone, a Model-T Ford's engine block, numerous campaign buttons, and large amounts of newspaper, as usual, tied up neatly in bundles.

Homer Collyer's funeral held on April 1st...

Homer Collyer's funeral was held on April 1st, but of the fifty-three people who were present, only two actually knew him. Both were neighbors. Seventeen cousins of the Collyers were also in attendance.

John R. McMullen also attended, hoping that perhaps that Langley would appear at last. Said Mr. McMullen to the press, "I had hopes until the last minute that Langley would be here if he were alive." When questioned if he believed Langley was still alive, he replied, "One guess is as good as another." The police search for the missing brother continued. They sent out 500 pictures of him to every New York City police precinct, and also to the police in eleven states. Efforts to clear the house were now in the second day. The detectives and laborers continued their methodical work. By the end of that day, nineteen tons of trash and objects had been removed. The bulk of this came from the first floor hallway.

It was decided by the public administrator that Langley's estate would pay for the use of a school building where valuable items from the home were being stored. The Department of Housing and Buildings, meanwhile, ruled that the house would eventually have to be repaired or demolished. On the 3rd, it was thought that the mystery of Langley's whereabouts had been solved when a body resembling his description was discovered floating in the East Bronx in Pugsley's Creek, but the excitement ended abruptly when the body was identified as an elderly man who had recently disappeared from a houseboat.

April 7th: 103 tons of rubbish removed to date ...
By the 7th of April, workers had removed approximately 103 tons of rubbish from the home, with twenty-two tons having been removed on that day alone. Among the more interesting items found at that point were five violins that were to be sent for appraisal. It was estimated by the supervising detectives that it would take another week to ten days to clear out the structure.

Down at the Missing Persons Bureau, Detective Charles Meyers offered the theory that "Everything points to Langley being dead in the building." He added that the results of an autopsy on Homer indicated that there had been no food or liquid in the invalid's stomach. Detective Meyers concluded that, "Homer died for lack of care." It simply did not add up that Langley would have allowed his brother to die unattended, or simply not show up at his funeral.

April 8th: Langley's body finally discovered...
It would ultimately turn out that Detective Meyers was correct, as on April the 8th, Langley's body was finally discovered, pinned by one of his own booby-traps in that same room on the second floor where Homer's body was previously found.

The work of clearing the house that day had proceeded as usual, with workers from the public administrator's office and police working their way through the second floor. By 3:30 that afternoon, about seventeen tons of material had been removed and loaded onto Department of Sanitation trucks. Shortly afterwards, a detective, Joseph Whitmore emerged from the building and asked reporters waiting on the scene to follow him. He led them to a corner drugstore. Placing a call to his headquarters, he reported, "We've got him." He went on to explain that he, and detective John Loughery, had located Langley's body. Loughery added, "We were scraping around in the rubbish when we saw a foot sticking out."

Within an hour, as word spread of the discovery of the body, a crowd of around 500 locals who had gathered to watch the day's work at the house, swelled to over 2,000.

Police higher-ups, including Commissioner Arthur W. Wallander, soon arrived on the scene. The commissioner commended detectives Whitmore and Loughery for their work in the investigation. Thomas A. Gonzales, the medical examiner, spent a half hour examining the corpse. He estimated that Langley had been dead at least two weeks, and possibly as long as four, and that the cause of death was either starvation or suffocation.

Langley died, trapped in debris...
Langley's body lay on its right side, inside one of the two-foot-wide tunnels that was part of the maze he had created, his head turned toward the area where his brother's cot had been, only eight feet away. The room, itself was filled with piles of newspapers, books, old furniture and tin cans. The materials that had apparently trapped Langley were a suitcase, three metal bread boxes, and bundles of newspapers. One particularly unpleasant detail was that the numerous rats that infested the house had gnawed at his partially decomposed body.

Jacob Iglitzen, who also happened to be the druggist from whose store the phone call had been placed, subsequently identified the body. He stated that he was able to recognize Langley's face, although it was somewhat decomposed. He also identified Langley's clothes. Overall, the evidence appeared to indicate that Langley had been killed by falling debris, and that his invalid brother, Homer, died from dehydration and malnutrition.

Attorney McMullen, told the press that he planned to confer the next day with Joseph A. Cox, an attorney for the city's public administrator, concerning the handling of the brother's assets, which were now estimated to be in the range of $100,000 distributed among various bank accounts and real-estate holdings. This finally laid to rest the popular notion that the brothers were multimillionaires.

Langley had died a month before his brother...
The next day, on April 10th, the medical examiner concluded that Langley Collyer had been smothered by the debris, which had collapsed upon him, and had been dead for at least a month before his brother, Homer. A funeral was held the next day on the 11th at Cypress Hills Cemetery in Brooklyn. The Reverend Dr. Charles T. Bridgeman, the assistant pastor of Trinity Church presided. There were forty persons in attendance, including many cousins. The saga of Langley Collyer was not quite finished, however.

A month later, the Commissioner of Housing and Buildings, Robert F. Wagner, Jr., announced that the house at 2078 Fifth Avenue still contained substantial filth and garbage, and that it remained "a distinct menace to health." He requested that the public administrator in charge of the brother's estate, Francis J. Mulligan, clear out the building, in order that the property could be surveyed. Findings would then be sent to the state Supreme Court so that the city could receive permission to demolish the building. On June 30th, Supreme Court Justice J. Edward Lumbard signed the order for demolition.

Collyer home to be demolished...
An inspector from the Department of Housing and Buildings had noted that the "roof beams were water soaked, rotted, and defective," and that all the floors throughout the entire building are sagging and defective." The city would next seek bids on the demolition of the building, and sometime after, the Collyer mansion was no more.

.=2E.and the property finally auctioned.
As a final chapter, the lot at the corner of 128th Street was publicly auctioned on March 1, 1951.

Unfortunately, Langley Collyer lived in an era when problems such as compulsive hoarding were regarded as eccentricities, something to be laughed at or ridiculed. Assuming that even had he been able to come to grips with the fact that he had a serious problem, there is little that would have been done for it at that point in history. Back in the first half of the 20th century, problems such as OCD were treated with psychoanalytic-type talk therapies, which produced little in the way of results.

Even today, we still read reports of individuals whose trash-filled properties have been condemned, or who were forced by law to clean up dwellings, which have been declared public nuisances or even health risks. Municipal governments and the media still seem to not understand what is going on in these situations, and that these are individuals in serious need of help. Sufferers of O-C disorders can be found to have varying degrees of insight. They may differ in their ability to recognize that they have a disorder, or that their behaviors are not those of the average person. It would appear that Langley Collyer, if he in fact had OCD, might have been one of those with a lower level of insight into his problem. It may well be that he believed his hoarding behaviors served a valuable purpose of saving money an ironic notion, considering that the brothers were relatively well off for the era they lived in.

It would also seem that in terms of reclusiveness, Langley and his brother became caught in an insidious loop. That is, as their behavior moved further and further away from the norm, and people's reactions to them became more critical and judgmental, they pulled in their boundaries and cut themselves off even more. This, in turn, would most likely have served to make them seem even more abnormal to outsiders, resulting in even more harsh treatment by the outside world.

Compulsive hoarding now regarded as treatable...
Nowadays, compulsive hoarding is regarded as treatable via behavioral therapy and medication. Sufferers can learn to clean up their dwellings, and to keep them that way.

In behavioral treatments for OCD, individuals are encouraged to gradually confront situations that cause them to feel anxious, while at the same time, resisting the performance of the compulsions they ordinarily use to relieve their anxiety. This approach is known as Exposure and Response Prevention.

In the case of hoarding, we are talking about gradually sorting out and discarding things that have been accumulated. This may be done under the direct supervision of a therapist working on the scene, or by giving the individual weekly or daily homework assignments. Before the actual work of therapy begins the therapist makes a thorough behavioral analysis in order to determine what is being saved, how it is being saved, and where it is being saved. This may involve either a home visit by the therapist to directly observe the scene, or the patient may bring in photographs showing views of all areas of the home.

Clutter and trash may be dealt with either by location or category, and in either case, is approached by first working on things that are easiest, and then working towards those that are more difficult. For instance, the therapist may pick a particular room, closet, or area for the individual to begin clearing out, and then, over time, assign tasks designed to accomplish this. Alternatively, as some people tend to save only certain types of things, therapy may start by earmarking these particular items for removal, wherever they may be found.

One example would be people who save excessive quantities of newspapers, magazines, etc. having to bundle and put out a certain amount of them each week. Or in the case of those who have accumulated large amounts of clothing (old or new), having to throw out or donate a set number of articles between therapy sessions. In addition to this activity, the therapist will work with the individual to establish a set of rules for what can and cannot be saved, and in the case of saved items, how to store or arrange them in a neat and organized fashion.

Some therapists will set up a rule governing how long an item may be kept without being used, before it is considered in need of disposal.

With my own patients, I have always used what I refer to as my "Three Year Rule." Under this rule, any item that has not been used in any way during the previous three years must be discarded. There can be exceptions, of course, as in the case of family heirlooms, antiques, valuable collections, family photos, or useful tools, etc.

Where people's lives and dwellings have been disorganized for long periods of time, these rules are necessary to establish some kind of order, and to prevent the person from falling into chaos again. In all cases, the ultimate goal is to get the sufferer to take personal responsibility for the state of their dwelling, and to accept that they really do have a problem.

Some people seem to think that the ultimate solution should be to descend upon a sufferer's home, and forcefully clean the place out. While this might remedy the immediate problem, nothing else really changes, and within a period of time, the dwelling will fill up with things again in the same way as before. In addition, the anger and anxiety on the part of the sufferer that would result from such a remedy would probably only push them away from seeking help in the future.

The story of Langley and his unfortunate brother remains as a cautionary tale - an example of just how serious hoarding can become when left untreated. With appropriate therapies, however, such extremes of behavior can be prevented from engulfing the lives of otherwise intelligent and potentially productive human beings.

> Medical Mystery: Compulsive Hoarders
> A Psychological Compulsion to Keep Everything, Even When It Ruins Your Life
> By CECILE BOUCHARDEAU
>
> Jan. 16, 2007- - We are all pack rats to some degree. We hoard, collect and buy more stuff than we have room to store.
>
> But what if something in our brains made us incapable of throwing things out? Janie Allocca and Lorraine Brennan both suffer from a psychological disorder called compulsive hoarding -- an urge to hold on to even the most mundane objects, even when they take over their lives.
>
> Watch "Primetime: Medical Mysteries" Wednesday at 10 p.m. ET, and go to

> ABCNEWS.com during the show to diagnose a real medical mystery.
>
> Lorraine Brennan has been hoarding for nearly 20 years. She lives in a two-story house in Massachusetts with her father, son and fianc=E9e. Most rooms in the house are cluttered, and some are even unusable. The bedroom-office that she shares with her fianc=E9e is overrun with stuff they tried unsuccessfully to get rid of at a yard sale. Lorraine's purse is bursting with junk mail and receipts.
>
> Brennan's hoarding is not only ruining her life, but affecting her entire family. Her son can't bring friends home from school. Brennan and her fianc=E9e have been engaged for eight years, but he hasn't been able to commit to marrying her because of the clutter.
>
>
> ## 'There's No Place to Sit Down'
>
> Many hoarders are also compulsive shoppers. Janie Allocca has accumulated so much stuff that she uses her own house as a storage facility and lives with her mother.
>
> "I remember collecting, and keeping, and hoarding things since I can remember," Allocca said. "And now I am just living around the piles and piles I need to get rid of."
>
> "I have so much stuff that my house is totally unlivable," she continued. "There's no place to sit down. I can't get to the kitchen. I can't have anyone over for tea even though I have everything for tea. My collecting is taking up the space where I normally would live."
>
> There's a fine line between simple clutter and extreme hoarding. Most hoarders, observers say, are physically incapable of throwing things out. They can't live in, or use, rooms like the kitchen for their intended use. They also experience extreme distress from their condition.
>
>
> ## The Brain of a Hoarder
>
> Hoarding is currently considered a subset of obsessive compulsive disorder, but that may soon change. New research is finding that hoarding may be a unique disorder completely separate from OCD.
>
> Dr. David Tolin, director of the Anxiety Disorders Center at the Institute of Living in Hartford, Conn., has devoted his career to studying what goes on inside the mind of a hoarder.
>
> "At the moment, compulsive hoarding hasn't been fully defined by the psychiatric and psychological communities," he said. "One of the things that we wanted to do was to understand some of the brain mechanisms behind compulsive hoarding."
>
> Allocca is part of a study Tolin is conducting to see which parts of a

> hoarder's brain become active when they are faced with making decisions. She is hooked up to a brain-scan machine and asked to look at pieces of her mail and decide whether she wants them to be thrown out. She then must watch the mail get shredded.
>
> At this point, two parts of a hoarder's brain become active. The brain's orbitofrontal cortex is involved in decision making and causes a hoarder to process this experience as a punishing one. At the same time, the hippocampus of a hoarder actively searches for memories about the object. The hoarder tries to remember the object: what it is and why they saved it in the first place. By contrast, people without hoarding problems just don't think about the object that much.
>
> ### 'A Painful and Effortful Process'
>
> "What we find is that the brain is acting very, very differently when a person hoards," Tolin said. "When the person is trying to make a decision about what to throw away, it seems that the person who is hoarding, is processing this activity as if it is deeply punishing."
>
> "The person who hoards is going through a very, very effortful search of their memory to try to think of as many things as they can about this item before they make the decision," Tolin added. "What this all amounts to then is a painful and effortful process of decision-making, that you and I might take for granted."
>
> There is no cure for hoarding, and there is no medication to treat the condition. Right now, cognitive behavioral therapy is the only way to help hoarders make decisions and deal with their emotions.
>
> ### Getting Help
>
> In Beth Johnson's "Clutter Workshop" in Hartford, hoarders and clutterers practice throwing out possessions they have grown attached to. Johnson also takes her clients on nonshopping -- or nonacquiring -- trips to teach them not to buy things they don't need.
>
> "I try to help them see the larger picture and how this item won't fit into their life," said Johnson. "If you have a jam-packed house, if you're adding to it on a weekly or daily basis, you're basically defeating yourself."
>
> Dr. Randy Frost, a professor of psychology at Smith College in Massachussetts, focuses on helping hoarders make their homes clutter-free.
>
> "One of the things we know about hoarding is that the beliefs people have about their possessions are so powerful, that it's very difficult for them to get out of this behavior," said Frost, who is also author of the upcoming book "Buried in Treasures." "If the person throws

> something away and experiences distress, and does it again and again,
> eventually, they won't have that extreme emotional response, throwing
> something away."
>
> Frost held a one-on-one session with Brennan to see if he could help
> her. After a few hours, she was able to throw away receipts and a few
> pieces of junk, but, as with most hoarders, there is still a long road
> ahead.
>
> One major motivator for Brennan is the possibility of losing her
> fianc=E9e if she doesn't clean up her home. When asked if she thought he
> would really leave, Lorraine said, "I don't want to find out. I don't

Not necessarily, I kept quite a bit of what my dad had kept
and would have kept a hell of a lot more of it if I had been
living in the same city instead of on the other side of the country.

> need for what they have saved, there is no one to give the items to, and the only result is that the hoarder is burdened with a house full of junk.
>
> Some of the things most commonly saved include newspapers, magazines, lists, pens, pencils, empty boxes, pamphlets, old greeting cards, junk mail, old appliances, outdated books and even assorted labels, string, rubber bands, plastic containers, bottles, and bottle caps. In the most extreme cases, people have been known to save such things as empty matchbooks, used tissues, old cigarette butts, bird feathers, old cars, discarded paper cups, used aluminum foil, paper towels, lint, and hairs. Some of these sufferers will even rummage through other people's trash, and bring home obvious junk that to them, seems quite useful or repairable.
>
> Accumulate things create fire or health hazards...
>
> Compulsive savers can accumulate large amounts of things, creating storage problems and fire or health hazards. Their houses can take on the appearance of having been ransacked, with floors waist-deep in trash and debris, rooms filled wall-to-wall with overflowing paper bags and cardboard boxes. Many sufferers can only make their way around their homes by creating aisles around and through the trash. Problems with municipal authorities are not uncommon, and hoarders are sometimes evicted or charged with violation of zoning or public-health laws. Ironically, the majority of people who save things compulsively rarely use or look at these things. Their security comes from merely having the things around "just in case" and in not having to make what seem like difficult decisions about what to discard.
>
> Let us now return to our story.
>
> The Collyers were part of one of New York's oldest families...
>
> Its main figures are two brothers, Homer Lusk Collyer (b. Nov. 6th, 1881), and Langley Collyer (b. October 3rd, 1885). The Collyers were part of one of New York's oldest families, a branch of the well-known Livingstons. Their ancestors had come over to America on the ship "Speedwell" in 1664, about a week after the Mayflower. The family had been members of the congregation of Trinity Church since 1697. Their father, Dr. Herman L. Collyer was a successful and renowned gynecologist, and his father, William Collyer, was said to have been one of the leading shipbuilders in America. In 1909, Dr. Collyer moved his family from Murray Hill to a fine upper-middle-class home in Harlem. It was a three-story brownstone located at 2078 Fifth Avenue (at 128th Street). Beyond his fame as a physician, the doctor was known to be a bit eccentric, paddling a small canoe to work each day at City Hospital on Blackwell's Island in the East River. He would subsequently paddle home at the end of his day, and then carry the boat on his head back to his house.
>
> Dr. Collyer's two sons seemed destined for successful lives of their own. Both attended Columbia University, where Homer earned a law degree, and his younger brother graduated with a degree in mechanical engineering and chemistry. Homer went on to practice admiralty law, but

> Langley, so far as is known, never held employment, and spent his time playing the piano. He is reputed to have won prizes as a concert pianist, but this cannot be verified. Perhaps Langley's inability to establish a career was an early sign of personal difficulties he may already have been experiencing.
>
> In 1917, the brothers had their telephone disconnected...
>
> It was probably a warning of things to come when in 1917, the brothers had their telephone disconnected, after being billed for long distance calls they claimed to have never made. This may have been the beginning of what would become a growing isolation from the outside world. Six years later, in 1923, Dr. Collyer died. Several years prior to his death, for reasons unknown, he had moved from his Fifth Avenue home to one at 153 West 77th Street. His sons remained at the family home with their mother. It is possible that a family breakup may have occurred.
>
> Life seems to have taken an abnormal turn for the two brothers in the year preceding the death of their mother in 1929. It appears that their gas was shut off in 1928, and they also seemed to have given up the convenience of running water and steam heat, and began using kerosene to light their home and to cook with. Water was obtained from a public fountain four blocks from their home. This was all clearly out of step for people of their education and social status.
>
> No one was ever permitted to enter their house...
>
> Despite all this, nothing appeared out of the ordinary to those in the outside world. The brothers were said to be courteous, cultured, and shy. The only sign that something might be amiss was that no one was ever permitted to enter their house. Around 1928, Homer worked for another attorney, John R. McMullen, who later became the family legal advisor. Homer next worked for City Title Insurance doing research in the New York City Hall of Records. He was described, at the time, as being courtly, and dressing in 19th century attire, presenting a rather Victorian appearance. He was said to resemble a gentleman of the 1880's.
>
> In 1932, Homer purchased a building across the street at 2077 Fifth Avenue for $8,000. He planned to divide it into apartments and to rent them. This plan was never realized, as he suffered a stroke in 1933, becoming blind as the result of hemorrhages in both of his eyes. With one exception, he was reportedly never seen outside of his home again. Langley then gave up his music to take on the job of nursing his brother back to health. No physician was ever consulted. Langley apparently believed that the cure for his brother's blindness was for him to eat 100 oranges a week, and to keep his eyes closed at all times, in order to rest them. The brothers possessed a large library of medical books, and it would seem that Langley felt he had the information and knowledge necessary to treat his brother.
>
> An intact Model-T Ford was discovered in the basement...
>
> At some point in the 1930's, the West 77th Street home where their father had lived was sold, and the new owner, a Mrs. Peter Meyer, discovered an intact Model-T Ford in the basement. It is not clear how

> it got there. Mrs. Meyer is said to have paid a workman $150 to disassemble the car and put the pieces in the street. This somehow came to Langley's attention, and for reasons known only to him, he carried the car piece-by-piece back to the basement of his Fifth Avenue home. It would appear that along with the loss of their other utilities, the brothers had no electricity, as Langley apparently tried to connect a generator to the car's engine in order to provide power, but was unsuccessful.
>
> The brothers eventually came to the attention of the general public when they were mentioned in an article written by Helen Worden, a reporter for the World-Telegram. A real estate agent named Maurice Gruber was attempting to buy some farmland in Queens that belonged to the brothers. Their refusal to respond to his letters or to answer the door when he tried to see them in person resulted in Gruber keeping a vigil at their home. In her article, Worden referred to Langley Collyer as "the mystery man of Harlem," and included in it, a whole range of sensational rumors that had been circulating about the brothers and their home. It was said to contain all sorts of rich furnishings, a vast library of books, and huge amounts of money that Langley would not trust to banks.
>
> The brothers were depicted as wealthy hermits...
>
> Worden, herself, kept a watch on the Collyer's home, and finally caught up with her elusive quarry one night, as he was leaving the house to go on what was one of his regular after-dark shopping trips. She questioned Langley about a boat (his father's) and the Model-T Ford said to be in their basement. Langley confirmed these stories. Rather than clearing up the mystery, Ms. Worden's article seemed to have only increased the speculation and rumors about the brothers, and during the 1930's other articles were written about the brothers in the New York papers. The brothers were depicted as wealthy hermits, living in a storehouse of money and valuables. People visited the house, banging on the doors or attempting to see them, while neighborhood children committed various acts of vandalism that included breaking windows. As windows were smashed, Langley systematically boarded them up instead of replacing them.
>
> Throughout this time, and most likely the result of a case of compulsive hoarding, Langley was hard at work filling the once attractive home with huge amounts of newspapers, cardboard boxes, barrels, metal cans, tree branches, scrap metal, and other assorted trash. In the case of the newspapers, it is said that he believed that his brother Homer would someday regain his vision, and would then want to catch up on the news he had missed. He was known to prowl the streets at night, gathering items from curbside trash piles and bringing them home. No one knows how many years he had been actively engaged in this collecting. His foraging resulted in all three floors of the house being filled with literally tons of things he had collected. Perhaps it was his knowledge of engineering that enabled him to arrange the boxes and packing cases in interlocking arrangements that concealed a maze of tunnels that only he knew.
>

> The home became a fortress with booby-traps...
> Langley was said to harbor fears of being burglarized, and there had,
> in fact, been several attempted break-ins over the years by those
> perhaps lured by the tales of stockpiled riches. The home became a sort
> of fortress for the brothers, with booby-traps constructed of great
> piles of debris rigged with the aid of trip wires to fall on
> unsuspecting intruders. This, of course, only served to increase the
> brothers' growing isolation. If their goal was to keep the world out,
> they were succeeding.
>
> Although the brothers were by no means poor, Langley is also said to
> have regularly rummaged through garbage cans seeking food. He went
> begging at butcher shops for scraps, and was known to have walked as
> far as Williamsburg, in Brooklyn to purchase stale bread at the lowest
> possible cost. The Collyers again appeared in the newspapers in April
> 1939, when, armed with a court order, a city marshal together with
> representatives of the Consolidated Edison Company entered the
> brother's two fifth avenue buildings and removed the gas meters, which
> had been in a state of disuse since 1928. A crowd said to be as large
> as 1,000 people gathered outside their home to see what was happening.
>
> Homer's last appearance outside the house is said to have occurred a
> number of months later on January 1st, 1940. Sgt. John Collins, a city
> policeman from the 123rd street station who was familiar with the
> Collyers, spotted the two brothers carrying a large tree limb from
> across the street into their basement. Langley guided the branched end,
> while Homer held up the other end.
>
> Not paying taxes was a symptom of their reclusiveness...
> Although the brothers did everything they could to avoid public
> scrutiny, it had its own way of intruding into their solitude.
> Ironically, it was their reluctance to encounter the outside world that
> continually brought the world to their doorstep. It appears that not
> paying taxes and other bills was a symptom of their reclusiveness, and
> it caused them no end of trouble. The most highly publicized example
> occurred in August of 1942, when the Bowery Savings Bank foreclosed on
> a mortgage that amounted to $6,700 plus interest (no interest had been
> paid since 1940).
>
> After going to state Supreme Court, the bank obtained permission to
> evict the brothers from their home. The very same day, however, the
> Collyer's attorney, John R. McMullen, met with bank officials with an
> offer by his clients to repurchase the property. As the house was seen
> to be in very poor condition, it appeared that the Bowery Savings Bank
> was not all that eager to repossess it. Mr. McMullen had never actually
> been allowed in the brothers' house, so instead, Langley, who almost
> never appeared in daylight, had walked all the way to his attorney's
> office on Park Row to discuss the matter. Mr. F. Donald Richart, vice
> president in charge of real estate for the bank, consented to give the
> brothers "a generous amount of time" so that they could work out the
> details of the repurchase.
>
> Growing rumors that Homer had died...

> There were growing rumors on the street, around this time, that Homer had died and that his body was still in the house. Sgt. Collins of the 123rd street station (mentioned earlier), took it upon himself to look into the matter. He encountered Langley, and somehow got his permission, despite some reluctance, to enter the house through the basement door. In a surreal journey through a labyrinth of tunnels in the trash and homemade booby-traps that lasted a half hour, Langley led the officer to the bedroom where Homer was to be found. What happened next is told in Sgt. Collins own words. "I switched on my flashlight, and there was Homer sitting up like a mummy. He was on a cot, a burlap bag beneath him and an old overcoat on the foot of the cot, and he spoke directly to the officer. "I am Homer Collyer, a lawyer. I want your shield number. I am not dead. I am blind and paralyzed." Langley subsequently made a complaint to the police department about the incident, but no action was ever apparently taken on the matter.
>
> In the matter of the Bowery Savings Bank, it seems that no repurchase offer was ever worked out, so in October, Supreme Court Justice Bernard Botein signed an order permitting the city sheriff to evict the brothers from their brownstone. This same judge's decision, which had been issued in August, was now about to be carried out. The bank, still trying to not have to resort to force, repeatedly mailed eviction notices to the brothers, who never responded.
>
> The Bowery Savings Bank was not to be put off indefinitely. As the new owner of the building, they were required by the city to make repairs to the property according to the city's building and sanitary codes. At the end of September, they dispatched a crew of workmen to the house to begin carrying out the repairs that had been ordered by the Department of Health. A number of police officers and patrol cars were sent to the scene to manage the inevitable crowd that had gathered, as it always did whenever any activity took place at the Collyer home. As the workmen went about repairing a falling stone cornice, replacing missing window panes, and removing piles of junk from the rear of the property, Langley Collyer called out to them from an upper-story window, demanding to know by what right they were trespassing on his property. The contractor was then forced to stop work and obtain a copy of the city order, in order that the repairs might continue.
>
> The city sheriff carried out the eviction order...
> On November 19th, following the brothers' repeated refusal to respond to various notices, the bank requested that the city sheriff carry out the eviction order and enter the house by force, if necessary and remove the brothers. In short order, at 10 o'clock, there showed up at the Collyer's door two deputy sheriffs, Herman A. Murray and Gillespie Anderson, police captain Christian Zimmer of the 128th street police station, Dr. Marshall Rose, sheriff's physician, John Redfield of the Bowery Savings Bank, and Joseph and Herman Cohen, a father and son, respectively, who were both locksmiths. Mr. McMullen, the Collyer's attorney met them there. The group took turns pounding on the door for over an hour, but the only answers were echoes. A crowd collected on the sidewalk, hoping to get a glimpse of what was going on at the "haunted house," as it had come to be known in the neighborhood.

> The locksmiths then tried for another hour, in vain, to force the lock on the large wooden front doors, but were unsuccessful because of all the rust and corrosion. Going to the rear of the house, they were able to remove an iron grille-covered door leading to the basement with the help of the two deputies. Here, they found themselves stymied again, as they found their way barred by a mass of wire netting, behind which was a solid mass of crates, barrels, and large tin canisters from floor to ceiling. Seeking another entrance, they next moved on to another rear door, and tore away its rotted boards, only to find a further wall of garbage cans, trunks, crates, and pieces of rusted iron. Breaking in yet another rotted door next to this one, they were met with a similar obstruction.
>
> Covered with dust, and feeling frustrated, the team returned to the front of the building to form a new plan of action, and decided to now make their way into the building via a window. One of the locksmiths, Joseph Cohen, swung up from the top of the front stoop and made his way to the ledge of one of the building's high north windows, where he forced open the shutters. He then broke a windowpane with a hammer, and climbed in through the now empty frame. His son Herman stood outside the window on the ledge and peered in at his father, who by this time was half-choked with dust.
>
> The room was filled to overflowing...
>
> As with the other parts of the house encountered thus far, the room was filled to overflowing with various and sundry items - heaps of old sheet music, gilded picture frames, Christmas ornaments, broken plaster cherubs, piles of books, garden baskets, etc. Joseph Cohen finally managed to work his way downstairs to the front entrance where he and deputy Murray were able to open a path near the door. Clouds of choking dust enveloped them, making the going difficult, and breathing an effort. They eventually opened a parlor door and made it into a hallway where they encountered further barricades. Suddenly, they were greeted by a weary voice from out of the gloom, asking, "What is the meaning of this?" Deputy Murray replied, "I have an eviction notice." Langley then asked him, "Is Mr. McMullen here?" McMullen, who had by now worked his way to the barricade called out to his client, "They will put you out, Mr. Collyer, unless your keep the agreement." Langley replied, "Do what you think best." Following his attorney's advice, Langley then borrowed a pen from the deputy, and signed a check for the full amount, thus ending the invasion.
>
> But the Collyer's troubles were not yet over.
>
> The IRS was now pursuing Homer for income tax arrears...
>
> They came in for some further unwanted attention in February 1943, but this time from the Internal Revenue Service. The IRS was now pursuing Homer for what it claimed was $1900 in income tax arrears plus interest that had accumulated over the previous twelve years. Homer was notified that unless this sum was promptly paid, the house he owned at 2077 Fifth Avenue would be sold at auction on February 3rd. This was the building across the street he had purchased with the intent to divide

> into rentable apartments. The ever-patient Mr. McMullen hoped his
> client would come through at the last minute, as had happened
> previously, although the attorney had been unsuccessful in his attempts
> to contact the brothers.
>
> On the day of the auction, the IRS representatives waited for over an
> hour beyond the scheduled auction time, and finally, the property was
> put up for bid. When no bids were offered, and with Mr. McMullen
> present, the government took possession, although it was not eager to
> do so due to the poor condition of the property. It was so rundown,
> that it hardly seemed worth the effort. Beyond the building being of
> little worth, there were also the problems of the cost of the auction
> itself, not to mention the $3,000 in back taxes on the property owed to
> the City of New York that had been unpaid since 1938. According to the
> rules, the government would have to hold onto the property to allow
> Homer the chance to pay what he owed and get his property back. He
> never paid, and it does not appear that the government ever went any
> further in the matter of taking possession of the building, as will be
> seen.
>
> Over three years later, the Collyers once again found themselves in the
> news.
>
> The reclusive Langley refuesed to cooperate...
> On July 23, 1946, two police officers, Daniel Pesek and John Killoran,
> while on radio car patrol, heard noises coming from 2077 Fifth Avenue.
> Upon further investigation, the officers discovered two men stealing
> plumbing and electrical fixtures from the building. The two patrolmen
> tussled with the vandals, capturing one of them, a homeless man named
> George Smith, aged 25. Officer Killoran hurt his leg when he fell
> through a hole in the floor. The officers then attempted to contact
> Langley in order to get him to swear out a complaint against the thief,
> but speaking to them through his locked door, he refused to do so.
> Despite his lack of cooperation, Langley was named as the complainant,
> and notified that if he did not appear in court, the city would issue
> him a subpoena. He still refused to cooperate, but after officer Pesek
> tried several times to serve him with the subpoena, he relented. It
> seems that time and again, only the threat of legal action could pry
> loose the reclusive Langley from the decrepit building he and his
> brother called home.
>
> On July 27th, dressed in turn-of-the-century garments, he appeared in
> the city's Felony Court as complainant against Smith. What was
> particularly unclear about all this was that technically, the Collyers
> no longer owned 2077 Fifth Avenue. Langley clearly did not accept all
> this, and prior to signing the complaint, he stated, "My invalid
> brother, Homer Lusk Collyer, and I still own that house and we have the
> keys to it." He added, "The government seized the property on the
> contention we did not pay income taxes, but we are going to sue and get
> that property back, because the government can't demand income taxes
> from us when we had no income." The brothers had, in fact, never
> surrendered the keys to the building. He went on to relate that this
> was the third incident in which he had had to go to court to swear out

> a complaint against criminal intruders at his home.
>
> The brothers owned two land parcels in Queens County...
> The last time either of the Collyer's was seen alive, was the result of
> yet another tax problem with New York City. It seems that the brothers
> owned two land parcels in Queens County, which they had inherited from
> their father. The city had wanted this land for new streets and other
> purposes, and Langley, together with Mr. McMullen, had a meeting about
> this with the city's corporation counsel the previous October. After
> Langley refused two summonses to testify before Supreme Court Justice
> Charles C. Lockwood, the land was condemned by the city, and the
> brothers were awarded $7500, which was substantially less than its
> appraised value. Unfortunately, they would see none of this award, in
> any case, as the city claimed the brothers owed it $27,000 in back
> taxes. Interestingly, a news article about this in the New York Times
> mentions that the brother's only regular means of contact with the
> outside world was a crystal radio set.
>
> Which brings us back to the beginning of our story on the morning of
> March 21st, 1947, with the police receiving the phone call from the
> mysterious Mr. Charles Smith.
>
> An officer was was unable to open the front door...
> The police had received a number of such calls over the years, but as
> usual, they were obliged to respond. An officer was dispatched to the
> scene, but was unable to open the front door. He then put out a call to
> Police Emergency Squad 6, which arrived on the scene at 10:00 a.m. They
> began by cordoning off the Collyer's house in order to hold back the
> crowd of curious onlookers, which grew as large as 600 people. The
> officers began their search by using crowbars and axes to try to force
> an entrance into the house. They broke their way through an iron
> grille-covered door to the basement in the front of the house, but as
> had happened in the past, they immediately found themselves confronted
> by the usual floor-to-ceiling wall of crates, newspaper, furniture, and
> odd pieces of junk.
>
> Officers found the emaciated body of a white-haired man...
> For their second attempt to gain entry, the officers obtained ladders
> from the Fire Department and tried the windows on the upper floors.
> Unfortunately, many of the shutters on the windows couldn't be opened,
> and it wasn't until 12:10 p.m. that a patrolman William Barker was able
> to make his way through a second story window. Patrolman Barker was not
> seen for several minutes, and on his return to the window, called to
> his fellow officers, "There's a DOA here." In response, Detective John
> Loughery made his way up the ladder in order to view the body, as other
> officers began to batter in the wooden front doors with axes. They were
> again faced with another massive obstruction of neatly tied bundles of
> newspaper, as well as cardboard boxes filled with assorted contents.
> Although they tried to tear down the wall of debris, they were forced
> to admit defeat. Meanwhile, Detective Loughery related what he had seen
> - the emaciated body of a white-haired man dressed in a tattered gray
> bathrobe, sitting upright, and tentatively identified as Homer Collyer.
> The medical examiner, Arthur C. Allen, arrived at 3:45 p.m., and

> declared that the individual had been dead for approximately ten hours.
>
> The next order of business was to locate Langley, who was nowhere to be found on the premises. It was reasoned that if he were within the house, he would have made an appearance by this time, as he usually did. Police were perplexed about how Langley was able to enter and leave the building, but neighbors stated that he regularly entered and left on his daily shopping trips via the front basement's iron-bound door. After their own struggle to enter, the officers refused to believe that this was possible.
>
> The entire house was packed with debris of various kinds...
> According to the New York Times, the entranceway past the basement door contained "... an old stove, several umbrellas, numerous packages of newspapers, a gas mask canister, an old stove pipe, and a broken scooter." There were also numerous rats seen darting around and through the piled trash. An inspection of the rest of the premises through various windows and around the second floor where they had entered revealed that the entire house was packed with debris of various kinds. It appeared that the building was riddled with a maze of tunnels through which Langley had moved, pulling bales of newspaper in behind him, to prevent intruders from entering. The police also found tin cans and piles of heavy debris wired together to form booby traps, in which the cans would sound an alarm, and a mass of junk would fall on the unsuspecting invader.
>
> ...newspapers lying around that dated back to 1915.
> Homer Collyer's body was taken away in a body bag to the police van that would transport it to the morgue. An autopsy was to be conducted to determine the cause of death, although foul play was not suspected. The crowd, milling around on the sidewalk hoping to see what was going on inside, and trading stories about their unusual neighbors, and the fabled wealth that was rumored to be hidden in the house. Some believed the numerous cardboard boxes that filled the house were stuffed with cash. As they searched further, police found newspapers lying around that dated from as far back as 1915. Strewn everywhere were such things as hats, boxes of Christmas cards, a folding chair, a broken sled, and automobile seat, part of a piano frame, etc.
>
> The police were careful to put everything back in place, including the materials they had removed to be able to enter the building. They then boarded up the house at 5 p.m., at which time, Attorney McMullen arrived on the scene. He took charge of all papers, notes, and letters discovered there by the police, and stated to the press that he was sure his elderly client would soon be in touch with him. He also quoted Langley as having said that they were entitled to live their own lives.
>
> No one had any idea of where Langley might be found...
> The next day's papers puzzled over the missing Langley. No one had any idea of where he might be found, with the exception of Mr. McMullen, who told reporters, "Your guess is as good as mine, but I think he is in the house, myself." Detectives from the 123rd street station thought that he might still be out on one of his shopping trips to Brooklyn.

> These were sometimes known to last as long as twenty-four hours, because he made the trip on foot. Deputy Inspector Christopher Salsieder announced that if Langley did not show up by 1 p.m. on March 24th, a missing person's alarm would be issued. In the meantime, it was decided to not perform an autopsy, as the cause of death was believed to be the result of "ateriosclerotic heart disease," which, it was said, could be determined by external examination. Later reports seem to indicate, though, that an autopsy was finally performed.
>
> Of course, the usual publicity-seekers were quick to come out of the woodwork.
>
> William Rodriguo, a sometime Democratic politician from Harlem, came forward, claiming to be the "Charles Smith" who had phoned the police, touching off this latest incident. He stated that he had used a false name due to not wanting to get involved, but had later changed his mind. He added a further touch of mystery to the story, telling police that he had been told of the Collyers' deaths by an unknown man he had met in front of their house the morning of his phone call. The next day, on the 23rd, the crowd outside the decaying brownstone had grown to several thousand people. Langley had still not appeared, and the curious were hoping for a glimpse of him, or failing that, his remains.
>
> A stream of autos crawled by the building...
> One man showed up with a shovel and began digging in the building's front yard, but was removed by the police. A stream of autos from as far away as New Jersey and Connecticut crawled by the building in a regular procession. The daily papers thirsted to know about the contents of the house, rumored for years to contain numerous grand pianos, a Model T, and a boat.
>
> Inspector Joseph Goldstein of the Tenth Division speculated that a thorough search of the entire house would occupy a police emergency squad for three weeks. They were to begin work later that day, following an inspection by the Department of Housing and Buildings and the Board of Health. The strategy would be for police officers to begin with a search of the top floor, dumping the contents into the backyard. It was decided that the items removed would not be taken away until the public administrator or an heir of the Collyers gave approval. A relative of the brothers, William Collyer of Yonkers, turned up at the house that day, relating to reporters that his mother and sister had visited the brothers in 1928, and noted that the house, at that time, contained no furniture, but was already filled with quite a bit of debris.
>
> The clearing of the building began the next day on the 24th. This first stage of the operation, the clearing of the top floor, began that afternoon, headed by Inspector Goldstein.
>
> Officers broke open several skylights to enter the building...
> After Mr. McMullen declared Langley missing at 1:15 p.m., and after officials from the two city departments declared the building safe to enter, the officers of Emergency Squad 6 began their task by sending

> over a ladder from an adjoining rooftop. After climbing across, they
> broke open several skylights and a roof trapdoor, through which they
> entered the building. Once inside, they smashed windows in order to get
> some badly-needed ventilation. A large crowd, whose numbers now ran as
> high as 2,000 watched the spectacle from the street, windows, fire
> escapes, and rooftops, cheering each time a sizable object was thrown
> into the yard below. Among these items were a gas chandelier, the
> folding top of a horse-drawn carriage, a rusted bicycle, a child's
> chair, an automobile radiator, dressmaking dummies, a sawhorse, a
> rusted bedspring, a kerosene stove, a doll carriage, a checkerboard,
> and numerous bundles of newspapers. A team of sixteen men inspected
> each object as it was thrown out, looking for valuables and important
> papers to be saved. They found enough ledgers, correspondence, and
> legal documents to fill eight crates which were taken to the West 123rd
> street station to be looked over by someone from the public
> administrator's office.
>
> Over 2,000 dust-covered volumes and five pianos...
> At 3 p.m., Inspector Goldstein called off the search for Langley for
> that day, and sent his men to check out the basement. They found the
> walls lined with ceiling-to-floor bookcases containing over 2,000
> dust-covered volumes, among them numerous books on the law and
> engineering. Reporters and a family member were allowed to have a look
> around, and among the newspapers and cardboard boxes there were as many
> as five pianos. With much effort, the officers cleared a path to a
> stairway, but were unable to open up the stairway itself. While
> clearing this area, they stumbled on a generator, which may have been
> used to produce electricity.
>
> Some of the debris removed was piled in the front areaway, and included
> a kiddy car, three women's hats, a box of curtain rings, a green toy
> bus, some lead pipes, and a Metropolitan Opera program from 1914. At 4
> p.m., the Emergency Squad forced their way into the first floor. Aided
> by searchlights powered by a portable generator, they made out a
> mahogany mantelpiece containing a large cracked mirror resting against
> a wall, an old RCA radio in a corner, and a large pile of furniture
> covered with dust standing in the middle of the floor. The windows were
> covered with a filthy green drapery.
>
> At this point, the search was ended for the day, with the police
> boarding up the windows, and piling the collected debris in a section
> of the yard surrounded by a tall iron fence. Langley had still not been
> found, but the police were determined to return and finish their
> search.
>
> March 26th, still no sign of the missing brother...
> The following morning at 10 a.m., the officers resumed their search. It
> was now March 26th, with still no sign of the missing brother. The day
> was particularly windy, blowing some of the old newspapers down the
> street, where they were snatched up by the ever-present crowd as
> souvenirs. The overwhelming mass of debris the police removed from the
> house consisted largely of old newspapers, cardboard boxes, magazines,
> and pieces of wood. Among the other assorted things uncovered that day

> included a nursery refrigerator, a beaded lampshade, a box of toy tops, and a toy airplane.
>
> In the basement, they found the chassis of the fabled Model-T Ford, thus confirming one rumor. Important documents and papers continued to turn up, and these were removed to the 123rd street station. Any useless material that could be combustible was carted away in two truckloads by the Department of Sanitation, to be burned in its incinerators. The first load weighed 6,424 pounds, and the second a bit less.
>
> A further maze of tunnels and several new booby-traps...
> One rumor that was put to rest was the existence of a secret basement tunnel connecting the brother's two buildings. In addition to discovering a further maze of tunnels, several new booby-traps were found, consisting of things such as cans, or large tree limbs (as large as twenty inches in diameter), set to drop on unwary intruders.
>
> The police were becoming increasingly convinced that Langley was not to be found alive on the premises, but they were determined to continue their search of the entire house. Inspector Goldstein stated that the work would continue, "... until we are sure Langley Collyer is not in there, dead or alive." One theory was that his body might yet be found stuck in one of the booby-trapped tunnels. Assistant Chief Inspector Frank Fristensky, Jr. told the press that it would take them several more days before they had a clear picture of what the interior of the building contained. Attorney McMullen had already become concerned about the brother's tangled finances and their numerous bank accounts. He estimated their worth to be in the six-figure range, not including the real estate they owned.
>
> Work continued on the 26th, much as it had the day before.
>
> The Emergency Squad began work at 10:00 a.m., halting briefly at noon when some confusion arose over whether proper legal authorization for their work had been obtained.
>
> ...searchers tossed large amounts of material from the windows.
> At 2:30 efforts to clear the top floor resumed, with the searchers tossing large amounts of material from the windows. Relatives watching the operation from the street complained to the police that they were being less than careful in discarding things, and risked discarding items of value, as well as important papers. This resulted in the officers being somewhat less energetic in clearing things out. One particular item that attracted attention was the discovery of a .22 caliber pistol and holster, along with ammunition of various types. This was turned over to the Police Ballistics Bureau.
>
> A report submitted to the public administrator of New York County by Deputy Chief Inspector Conrad Rothengast stated that it was believed that Langley Collyer was dead based upon the facts that the brother had never been away from his home for more than twenty-four hours, and that the death of Homer would certainly have been cause for him to have at

> least contacted his attorney or his relatives.
>
> The next day, the New York Times reported that the surrogate, a Mr.

> widely distributed. She added that the man had subsequently boarded a
> bus headed for Atlantic City. Police in that city then proceeded to
> make a sweep of hotels and rooming houses.

>
> Police recommenced their search on the 31st as planned, beginning at 8:30 in the morning. It appeared that they would be able to clear about one room per day, and there were an estimated twelve rooms in the building. The workforce at the house now consisted of two detectives and five laborers hired by Mr. Mulligan. Their work concentrated on the front basement room, which was found to hold 3,000 books, numerous telephone directories, a Steinway piano, a horse's jawbone, a Model-T Ford's engine block, numerous campaign buttons, and large amounts of newspaper, as usual, tied up neatly in bundles.
>
> Homer Collyer's funeral held on April 1st...
> Homer Collyer's funeral was held on April 1st, but of the fifty-three people who were present, only two actually knew him. Both were neighbors. Seventeen cousins of the Collyers were also in attendance.
>
> John R. McMullen also attended, hoping that perhaps that Langley would appear at last. Said Mr. McMullen to the press, "I had hopes until the last minute that Langley would be here if he were alive." When questioned if he believed Langley was still alive, he replied, "One guess is as good as another." The police search for the missing brother continued. They sent out 500 pictures of him to every New York City police precinct, and also to the police in eleven states. Efforts to clear the house were now in the second day. The detectives and laborers continued their methodical work. By the end of that day, nineteen tons of trash and objects had been removed. The bulk of this came from the first floor hallway.
>
> It was decided by the public administrator that Langley's estate would pay for the use of a school building where valuable items from the home were being stored. The Department of Housing and Buildings, meanwhile, ruled that the house would eventually have to be repaired or demolished. On the 3rd, it was thought that the mystery of Langley's whereabouts had been solved when a body resembling his description was discovered floating in the East Bronx in Pugsley's Creek, but the excitement ended abruptly when the body was identified as an elderly man who had recently disappeared from a houseboat.
>
> April 7th: 103 tons of rubbish removed to date ...
> By the 7th of April, workers had removed approximately 103 tons of rubbish from the home, with twenty-two tons having been removed on that day alone. Among the more interesting items found at that point were five violins that were to be sent for appraisal. It was estimated by the supervising detectives that it would take another week to ten days to clear out the structure.
>
> Down at the Missing Persons Bureau, Detective Charles Meyers offered the theory that "Everything points to Langley being dead in the building." He added that the results of an autopsy on Homer indicated that there had been no food or liquid in the invalid's stomach. Detective Meyers concluded that, "Homer died for lack of care." It simply did not add up that Langley would have allowed his brother to die unattended, or simply not show up at his funeral.

> April 8th: Langley's body finally discovered...
>
> It would ultimately turn out that Detective Meyers was correct, as on April the 8th, Langley's body was finally discovered, pinned by one of his own booby-traps in that same room on the second floor where Homer's body was previously found.
>
> The work of clearing the house that day had proceeded as usual, with workers from the public administrator's office and police working their way through the second floor. By 3:30 that afternoon, about seventeen tons of material had been removed and loaded onto Department of Sanitation trucks. Shortly afterwards, a detective, Joseph Whitmore emerged from the building and asked reporters waiting on the scene to follow him. He led them to a corner drugstore. Placing a call to his headquarters, he reported, "We've got him." He went on to explain that he, and detective John Loughery, had located Langley's body. Loughery added, "We were scraping around in the rubbish when we saw a foot sticking out."
>
> Within an hour, as word spread of the discovery of the body, a crowd of around 500 locals who had gathered to watch the day's work at the house, swelled to over 2,000.
>
> Police higher-ups, including Commissioner Arthur W. Wallander, soon arrived on the scene. The commissioner commended detectives Whitmore and Loughery for their work in the investigation. Thomas A. Gonzales, the medical examiner, spent a half hour examining the corpse. He estimated that Langley had been dead at least two weeks, and possibly as long as four, and that the cause of death was either starvation or suffocation.
>
> Langley died, trapped in debris...
>
> Langley's body lay on its right side, inside one of the two-foot-wide tunnels that was part of the maze he had created, his head turned toward the area where his brother's cot had been, only eight feet away. The room, itself was filled with piles of newspapers, books, old furniture and tin cans. The materials that had apparently trapped Langley were a suitcase, three metal bread boxes, and bundles of newspapers. One particularly unpleasant detail was that the numerous rats that infested the house had gnawed at his partially decomposed body.
>
> Jacob Iglitzen, who also happened to be the druggist from whose store the phone call had been placed, subsequently identified the body. He stated that he was able to recognize Langley's face, although it was somewhat decomposed. He also identified Langley's clothes. Overall, the evidence appeared to indicate that Langley had been killed by falling debris, and that his invalid brother, Homer, died from dehydration and malnutrition.
>
> Attorney McMullen, told the press that he planned to confer the next day with Joseph A. Cox, an attorney for the city's public administrator, concerning the handling of the brother's assets, which

> were now estimated to be in the range of $100,000 distributed among various bank accounts and real-estate holdings. This finally laid to rest the popular notion that the brothers were multimillionaires.
>
> Langley had died a month before his brother...
> The next day, on April 10th, the medical examiner concluded that Langley Collyer had been smothered by the debris, which had collapsed upon him, and had been dead for at least a month before his brother, Homer. A funeral was held the next day on the 11th at Cypress Hills Cemetery in Brooklyn. The Reverend Dr. Charles T. Bridgeman, the assistant pastor of Trinity Church presided. There were forty persons in attendance, including many cousins. The saga of Langley Collyer was not quite finished, however.
>
> A month later, the Commissioner of Housing and Buildings, Robert F. Wagner, Jr., announced that the house at 2078 Fifth Avenue still contained substantial filth and garbage, and that it remained "a distinct menace to health." He requested that the public administrator in charge of the brother's estate, Francis J. Mulligan, clear out the building, in order that the property could be surveyed. Findings would then be sent to the state Supreme Court so that the city could receive permission to demolish the building. On June 30th, Supreme Court Justice J. Edward Lumbard signed the order for demolition.
>
> Collyer home to be demolished...
> An inspector from the Department of Housing and Buildings had noted that the "roof beams were water soaked, rotted, and defective," and that all the floors throughout the entire building are sagging and defective." The city would next seek bids on the demolition of the building, and sometime after, the Collyer mansion was no more.
>
> ...and the property finally auctioned.
> As a final chapter, the lot at the corner of 128th Street was publicly auctioned on March 1, 1951.
>
> Unfortunately, Langley Collyer lived in an era when problems such as compulsive hoarding were regarded as eccentricities, something to be laughed at or ridiculed. Assuming that even had he been able to come to grips with the fact that he had a serious problem, there is little that would have been done for it at that point in history. Back in the first half of the 20th century, problems such as OCD were treated with psychoanalytic-type talk therapies, which produced little in the way of results.
>
> Even today, we still read reports of individuals whose trash-filled properties have been condemned, or who were forced by law to clean up dwellings, which have been declared public nuisances or even health risks. Municipal governments and the media still seem to not understand what is going on in these situations, and that these are individuals in serious need of help. Sufferers of O-C disorders can be found to have varying degrees of insight. They may differ in their ability to recognize that they have a disorder, or that their behaviors are not those of the average person. It would appear that Langley Collyer, if

> he in fact had OCD, might have been one of those with a lower level of
> insight into his problem. It may well be that he believed his hoarding

That was quite the visual story alrighty. As I read it I could "see"
these two old guys in their brownstone. Wow. But the conclusion is
correct; telling a hoarder to "clean it up" or doing it for them when
they aren't there doesn't help. Thanks for sharing :)

Are any of your aluminum plates 1/4" thick and big enough to cut 18"
triangles out of? I need some, and McMaster-Carr wants over $100 for
a piece of plate big enough for two. As I'd like six or eight, their
price is prohibitive. I might be interested in your pulleys, too,
depending on the size and configuration.

In other news, my late neighbor was apparently hoarding staircase
spindles--his survivors gave me about 500 this past weekend, about
430 of them the same size. They're overhead in the garage, now,
awaiting a project.

Gary

Count me in. And proud of it I might add.

I've always had an interest in electronics, even at a tender age. Not having much money to spend to build stuff, I had to cruise the neighborhood on trash day looking for discarded TV's and radios that I could use for parts. A couple of friends got into the act as well. This was a fun way to support a fun, and ultimately very profitable hobby.

Fast forward 40+ years, and I still have the stash of tubes I accumulated as a kid (and added to over the years). If I come across something that might be useful for free or cheap, I'll bag it and figure out where to put it later on. Picked up an old TV chassis a couple of weeks ago. Its an Admiral that was built in 1951. The owner wanted to keep the case to use in a high school play. A couple of hours of tinkering, and I got it working. Watched the football playoffs last weekend on a 17" black and white TV. The games were good, but watching them on an old TV I saved from the landfill, then repaired myself was a blast. Kept the shop nice and warm too!

I suppose anything can be taken to exteremes, but its a fine line. One persons trash is most certainly anothers treasure.

Steve

No, they are little square 5x5 plates, about 1/8" thick.

I do, however, have 3/8" about 8x14 plate and 1/2" 8x13 or so. Also aluminum.

Also I have big Al heatsinks, with which I can part very cheaply.

IIRC, I have one about 5" pulley with 1 3/8" shaft hole with keyway and special tightening screws. I have more, but those I may need.

Any way to weld them together? I don't mind going thicker, I need these
for decking in my antenna tower. I see a new rotator and thrust bearing
in my future.

>Also I have big Al heatsinks, with which I can part very cheaply.

Regrettably, I don't need any at the moment.

Price? You can email me; the address you see is valid.

>> In other news, my late neighbor was apparently hoarding staircase

>scary stuff.

I have no idea what they were intended for. I'm checking with some of
my friends who do woodworking and home fixup projects who might be

interested in some of them. Stacking two of the 36" size (the 430 items)
would be a good height for a childrens' play gazebo or something of that
sort. Maybe build up sets of three for table legs, but they'd need to be
cut down a bit.

Othewise, they were headed for the curb and didn't cost me anything.

Gary

It occurs in varying degrees. I've always seen scrounging of electronic goodies as more of a 'flow-thru' than a one-way path to my lab. Much stuff, of course, does end up on a one-way path to my workbench, but it's stuff that I constantly use (tools, soldering/desoldering gear, test gear, etc.)

The trick is learning what to shed, and when and how to shed it. Ham radio swap meets and Ebay are good paths.

Keep the peace(es).

I have seen this problem.

it is completely over come by Ockleshaw's workshop principle.
Ockleshaw being the possesor of the most amazing workshop.

"if it looks useful it isnt.turf it out.

if it looks *really* useful keep it for a month.
if you havent touched it in that month turf it out.

If something is actually useful but hasnt been used in a year turf it out.

that way you will have a workshop full of only the gear that you actually need"

...of course ockleshaw had a second shed :-)

Sounds good Fred and thanks for the input. I've gone ahead and ordered the battery from Icom in Bellevue, for that and the other to bands (1 and .7meters) since they are over 5-7 years old. Cheap to try at 7 bucks a battery. I'll really like the IC-x8 series. Even though they only have three PL tones on the memory they work well in high RF areas and simple to operate. I wish I could say the same for my VX5R. You have to become a damn computer whizz just to do anything on it. On the positve side it is easy to program with the RSS. I just like being able to make a change on the fly, working on several club's repeaters and links in the area. Also the Tx audio is great, if you take out that stupid "rubber".

Karl in Spokane

Because I think that they well might be useful later. A few things
that I have, are going into the trailer, such as steel handles,

electrical box, a big handle, etc.

i'm fairly new to the world of CB radios. my friend has one and got me interested, and i also liked the fact that i can get a PA system through one. i'll jsut throw it out there, what are some suggestions for a CB radio? i want one with PA capabilities. i also was wondering if yall had any speaker ideas, i know you need amps for some and i didnt know what kind of wattage requires an amp? i'm also interested in getting a police scanner, is it posible to get a combo or do you have to buy them separatly? Do i need any special kind of antena or a license to use a CB radio?

Any suggestions and help would be awesome!

Thanks
-davis

Well then you need to find the newsgroup that is about CB radio.

This isn't, it's about amateur radio equipment.

Something like rec.radio.cb is the place for you to be asking
your questions.

Amateur radio and CB are not the same thing.

  Michael

Only 467 folks signed up with Google. Since Google spent $100,000,000 on BPL,
what do you expect? Most people who read it avoid, or boycott Google.

Geoff.

Its interesting that when true hoarders collect things that are actually valuable, they usually manage to make them worthless by the time somebody else gets em.

There was guy down near Centralia Washington that collected cars- at his peak, he had something like 2000 of em. He was sure every one was "valuable" and would never sell. And as they sat, they rotted, tires grew thru the hoods, paint and chrome peeled, engines rusted solid, and when he finally died, and the family had to dispose of them, virtually none of them were worth anything, even as parts.

I have seen this same thing happen with tool collectors- the old guys are so sure that the stuff is worth a fortune, they routinely chase away people who would actually reuse, restore, or understand their tools, and want to pay reasonable prices for them- and so, in the end, it all becomes scrap.

There was a famous junkyard in Richmond Virginia, where the old guy saved Steam Railroad engines, and other huge machines. He never would sell, convinced he was sitting on a gold mine. Well, when he died, the relatives found he was- and it was the real estate. The land itself was worth a lot, the scrap metal on it was just that- scrap metal. A foundation was set up to save the oldest engines, and the relatives gave them away for free- and if it had happened 20 or 30 years earlier, there would have been a lot more to save- age, weather, and vandals had taken a severe toll. While alive, he cagily quoted prices of a hundred thousand dollars for a steam engine, and when he died, they were free for the hauling. Assuming you could afford to haul something that was 80 feet long and weighed 20 tons.

My S32 has blown up. Has anyone got a manual they could email me,
please? Any other ideas?

Thanks

Jean

So, how about my Radiotelegraph License. I suppose I will have to renew. Are
the code requirments still in effect? I suppose many of you who got the Extra
Class licesnses like me , also want to strive for the highest and get their
Radiotelegraph License with Ship Radar endorsments, and of course
Rafiotelephone also. I always thought they should have had a higher Amateur
class available.??

Apparently, the Morse proficiency requirement still stands for the
Commercial Radiotelegraph licenses:

http://wireless.fcc.gov/commoperators/t1.html
and
http://wireless.fcc.gov/commoperators/exam.html

Telegraphy Examinations Elements
Element 1 - 16 code groups per minute.
Element 2 - 20 code groups per minute.
Element 3 - 20 code groups per minute.
Element 4 - 25 code groups per minute

2nd class licensees must pass Element 1 (copy by hand) or Element 2 (copy by
typewriter).
1st class licensees must pass Element 3 (copy by hand) or Element 4 (copy by
typewriter).

An interesting thing to note: "The Commission will grant credit for
Telegraphy Elements 1 and 2 to applicants who hold an unexpired (or within
the grace period) FCC-issued Amateur Extra Class operator license."

So, if I read this right, the new no-code Amateur Extra-class license
holders who wish to apply for the 2nd 'Telegraph license will be given
credit for the Morse proficiency requirement w/o having to prove it.

It used to be called the Amateur Extra and then they gave it privileges with Incentive Licensing back in the '60s. As I understand it, it was an acheivement certificate that did not confer any additional operating privileges above General prior to IL.

For all I care they could drop the current names and call it Amateur First Class, Amateur Second Class, and Amateur Third Class that would map well to Extra, General, and Technician as they will be after the R&O becomes effective. Or, as prior to WWII, Class A, Class B, Class C. I guess that's too logical for today's world. But, I digress. :-)

I suppose that now a person can get their BSEE, MSEE, PhD, etc.

I am just relaying what came off the BBC and circulated world wide.
so dont blame me on their mistake if it truly is a mistake.
I hear more revisions from FCC are due out in Feb oo MARCH so maybe
it will rear  its ugly head again.

I merely passed on what BBC said.  I had no way of denying it.
Nothing was mentioned by the BBC about all that crap you mentioned.
                        Joe

Looking at the schematic, it looks like it is through the mic/speaker jacks
via the clone switch..

What revisions? There is nothing pending on the table right now as the
latest Report and Order will be the last one we see for some time.
Nothing is going to be revised. Did you bother to read the links that were
posted to the FCC's own web site, their own documents? Since when is the
BBC's word gospel and more importantly, why do you trust their "reporting"
more than the documents on your own regulatory agency's site?

Truly amazing...

I got curious about this "BBC story", and did some searches last night. Didn't find an article that came from the BBC, but there was a story from some US newspaper (I didn't not the URL or which one) that had similar wording. SOmething like "for people used to talking in dots and dashes..." It was simply badly worded, but it had the tone that CW was now dead.

So I can imagine the BBC having some badly worded piece that said that CW was gone.

Of course, there are two other possibilities. Someone is spoofing the BBC, and figures if they credit such a well-known institution people will believe that CW is now killed off.

The other possibility is that somehow the BBC talked to someone who wanted to make some statement, or even honestly believed that CW is gone, and the BBC took that statement on faith.

Any of your scenerios could be correct, Michael.

In retrospect, I would assume a BBC reporter to do their homework. Also, a BBC reporter covering this issue *should* know that the UK dropped the code exam requirement sometime back and that the FCC is merely following suit.

I'm still puzzled as to why Mr. Fenn continues to say "wait and see" when there is clearly nothing to "wait and see" for and he has been given plenty of links to documentation showing that the exam requirement will be eliminated but that Morse Code is still legal on all amateur radio frequencies except for 60m.

I would like to know *what* revisions he "hears" will be made and from *whom*.

Hello all,

I have a HW-7 that I recently acquired on a whim - it's been HEAVILY modified - RIT, CW filter, new front end on a home-built board, new power connector (yucky one), and other little mods and extra parts inside all over the place! And - you guessed it - it's stone cold dead. Any thoughts I where to begin trouble shooting such a wreck? Or is it worth even trying, given that most of the mods are on homemade boards with no documentation - no idea if they ever even worked. I've thought about just selling it again or ripping out everything and turning the case into a home built receiver of another design or housing an SST-20 xcvr in it.

Suggestions?

Thanks,

Dave WB7AWK

I have for sale a B&K Dyna Quik Model 500 Tube Tester, SN 11383. It has a tube chart in the inside of the top cover, but no manual. It appears to be is working sometimes. I tested some tubes and some gave me a reading, but on others, I got no readings. I think some of the tube sockets may need cleaning. It also needs the ac pilot lite replaced. Cabinet is in fair condition. Price is $40 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Dave-

If I had such a kit and the original manual, I'd un-build it and start the assembly process over again.

No, I don't want to buy yours! I already have an HW-7 that works.

You may wish to correspond with Mike Bryce, WB8VGE

He may have some ideas. too bad no one has offered new PC boards (FR-4 fiberglass and silk-screen for these old beasts - you could then rebuild with new components and salvage specific parts (tuned transformers) from the originals.

Actually, that sounds like a very fun idea - strip the whole thing down,
saving the 'unique' parts - coils, switches, tuning cap, etc. and replace
the resistors and capacitors and just build it like a new kit! How fun
is that?

I have my plan! Thanks for the idea - don't know why it didn't occur
to me!

Dave WB7AWK

ps - and I even have the original manual from MY OWN HW-7 that
I got for Christmas in 1974 as a kid - long ago lost the rig but still
have the book.

Dave,

If I recall correctly, the receiver section in the HW-7 left much to be desired (poor sensitivity & selectivity). So, from a functional standpoint, it'd likely not be worth "unmodifrying". Unless you want to reverse-engineer and repair what you have, you can look at it as a cabinet with lots of parts in it. On the other hand, if you want to return it to stock (for nostalgia purposes), maybe you can buy the manual from Fred! On the topic of kits, I hear nothing but rave reviews of Elecraft's products. Their K2 is a hot little rig and, I'd love to have one for myself.

73,
Bryan WA7PRC

I figured his complaint was that it's a jumble of wires so he's not sure what's in there.

But yes, given all the articles about modifying that rig at the time, his modified HW-7 likely is a better reflection of the rig than one that matches the way it was supposed to be put together.

It dates from a time when direct conversion receivers were seen as the New Big Thing, but before anyone had really caught on about how to build a good direct conversion receiver. A single mosfet mixer (I can't remember if there was an RF preamplifier ahead of it) was pretty lousy in terms of a direct conversion receiver. Oh, it likely did okay on SSB and CW, but it was lousy at ignoring the other signals, which is why there were all those mods. There was at least one article in QST where the receiver (either just the RF stages or the whole thing) was replaced with a far better receiver board, using a double balanced mixer.

It was akin to the Heathkit Lunchboxes, that were oh so common and did their bit to populate six and two metres, but weren't very good for much beyond local work, so they saw their share of mods too to get around the basic limitations of the design. The fact that they were cheap, and I seem to recall the HW-7 was relatively cheap too (certainly compared to a transceiver with a superhet receiver), likely added to the mods, because you wouldn't lose that much if you messed it up.

Of course, I am reminded of one receiver construction article in QST in the late fifties or early sixties where the author started with a commercial receiver kit, because it provided the chassis and tuning capacitors and coils at a relatively low cost, and then built his own receiver around it.

As one who built a HW-7 in 1975 (they were $69.95), I worked the world
on 20 and 15 with a 14AVQ. It is what it is. When they work well, they
work well. I have over 300 QSOs - many DX - using a HW-7 (sold it
a long time ago). It in no way equates to a 'modern rig' in any sense. But
as I said - I worked a ton of DX with it back in the late 70's and early
80's.

The one I just got is more than just a little modified - it's almost not
recognizable inside. I'm leaning more to calling it a nice cabinet into
which
to build a decent QRP transmitter with a VFO, and use my TS-440 to
receive. (or 'unbuild it and rebuild it - still haven't made up my mind).

The 'modifier' of this HW-7 may never have got these mods to work at
all! All I know is it is stone dead (with voltages all over the board, so I

know power isn't the issue).

The subject line says it all, a friend has acquired a new toy that is
way out of calibration, and needs the manual to bring it back to
life...
I'd like to locate a manual by march 1 for a birthday present.

I have a very nice, clean Kenwood TS-940SAT from an estate. It has been stored for almost 10 years,
but works great. I have tested it over the past month with no problems. It looks almost new. All dial
lights and displays work as they should, no problems in this area. The SN is 7080XXX.
This TS-940SAT is loaded with filters: YK-88A-1 AM Filter; YK-88C-1 500 Hz CW Filter; YG-455C-1
CW Crystal Filter for the 455IF. It also has the VS-1 Voice Board installed as well as the Automatic
Antenna Tuner. I am asking $990 plus shipping for it. If you don't need the optional filters and voice
board, I will pull them out and sell the transceiver for $690, but I would prefer to sell it as a package. Thanks, Charlie Hugg, K5MBX

FA: Heil Goldline GM-4 with the DX and the dream machine

Mic is in great shape. With  LX-1 Boom (missing base) I just mounted in
a hole in my desk corner. Hand switch is inluded with a yaesu 8 pin
cable.

Hello!

Some time ago I started a new section on my WEB. It is called EB5AGV's Workbench. On it I hope to share with visitors my experiences fixing test and radio gear in an informal way (kind of Blog sometimes).

First installment was devoted to the HP-8640B signal generator.

Second one (and just uploaded!) talks about the Kenwood R-5000 DRM addition.

Address of the index page is:

http://jvgavila.com/workb.htm

Hope you enjoy it!

Regards,

JOSE

Dave,

If it was mine, assuming that the cabinet and front panel were in good original condition, I'd totally deconstruct it and rebuild it back to stock condition. That should be relatively easy since you have the manual. Someone commented that the HW-7 has a lousy receiver. That's absolutely true. Compared to an FTdx-9000 or IC-7800, it's laughable. However, over the decades that the HW-7 has been around, thousands of hams have made tens of thousands of successful QSOs with them, and many continue to do so. It's a fun rig to play with. With that in mind, it'd be worth my time to rebuild it. If nothing else, it would be a nice project for those cold winter nights!

No, I don't want to buy it. I have my projects lined up...

73,
Dean K5DH

Swapfest 2007 at Little Joe's Country Gold
The Swapfest will be Saturday, January 13, 2007. Swapfest hours are 8:00 am to 3:00 pm. We will be at the same location as last year, Little Joe's Country Gold, 7405 Old Pearsall Road (southwest side of San Antonio). For a map click here.
http://tinyurl.com/y8p4dy
Admission is $4 at the door. Swapfest set up will open at 6:30 am with the doors opening at 8 am.

Tailgating Available! - In past years, this has been totally an Indoor event, but this year tailgating IS allowed. Limited tailgating spaces are available at $5 each. Please no swapping before 8:00 AM Saturday.

PDF copy of Inside <http://w5sc.org/Docs/Data/2007_Flyer_inside.pdf> and Outside <http://w5sc.org/Docs/Data/2007_Flyer_outside.pdf> of flyer mailed out.

Here are some of the Dealers that will be at the Swapfest this year!
K-COMM <http://kcomm.biz/>
Jubilee Enterprises <http://www.shopjubilee.com/>
The Sign Man <http://www.thesignman.com/> of Baton Rouge
HF Projects <http://www.hfprojects.com/hfprojects/>

VE Testing
Come upgrade or get your first ham license at the Swapfest! We test at a nearby library. Pre-registration is encouraged. Contact hamtest@... <mailto:hamtest@...> .

The Swapfest VE test session will be from 9 � 11 AM at the Johnston Library, 6307 Sun Valley Drive

http://tinyurl.com/yxj7px
, off Medina Base Road and SW Loop 410 (exit 3 and 3B). Bring $14 test fee and photo ID. People upgrading also need to bring originals and photocopies of your ham license and applicable CSCEs. Email http://tinyurl.com/wvno6 for more info.

Prizes!
Alinco DJ-596 Dual Band 5 Watt HT Transceiver (Early Bird)

Icom 718 HF Transceiver (Grand Prize)

Tables are $8 at the door.

Dealer Tables are $12 each. For a Dealer Registration Form click here. <http://w5sc.org/Docs/SwapfestDealerRegistration2007.pdf> Dealers, you may park your RV in the parking lot Friday evening. Two admission tickets are provided with each dealer registration. Dealer set up is Friday evening from 6 PM to 9:30 PM and Saturday morning from 6:30 AM to 8 AM. If you have additional questions, please contact the 2007 Swapfest Chairman, J C Smith, N5RXS, home phone (210) 522-6167, cell phone (210) 849-3404, or email n5rxs@... <mailto:n5rxs@...> .

For an Advanced Registration Form click here.
<http://w5sc.org/Docs/Data/2007%20swap%20fest%20%20Registration.pdf>

ARRL Forum
Dr. David Woolweaver K5RAV, ARRL West Gulf Division Vice Director, will host the ARRL Forum from 11:30 AM to 12:30 PM.

Food and drinks are available on site at competitive prices, including coffee, hot chocolate, soda, breakfast tacos and more.

Talk-in will be on 146.94 (-, 179.9 PL), and "chat" will be on 444.100 (+, 179.9 PL). Be sure to say "hi" to the talk-in volunteers at the table by the back door.

Please address all Swapfest inquires to n5rxs@... <mailto:n5rxs@...> .

Club History
San Antonio Radio Club from 1919 to 2007

Bexar County's Communication Resource since 1919
The San Antonio Radio Club is one of the oldest Amateur Radio clubs that is still around and operating. It was founded in 1919 as the "Bexar County Radio Association" and reorganized in 1929 as the "San Antonio Radio Club". We are one of the oldest affiliated amateur radio Clubs of the American Radio Relay League (since January 2, 1920).

Come to the San Antonio Swapfest 2007!

Have a RF Concepts 2 meter amp with 1 bad final
The driver is a single MRF 450 driving two SRF 3897's
The SRF 3897 is obsoleate and was replaced by MRF 248
Is there a better driver final combination to use? Is there a
inexpensive replacement for the SRF 3897?
Where would the best place to get a matched set of replacments for the
SRF 3897 of a matched set of the MRF 148?
Thanks

Hello,

I do sometimes APRS in my car with a TMD700 G2.0 with a Garmin Etrex.
Some times a receive a message that is not interested for me.
My bullitin (BLN) menu is empty but my MSG-group is default programmed with
ALL,QST,CQ,KWD.
When i want receive messages only for me from stations who see me on APRS is

erase ALL,QST,CQ,KWD required ?

You have to hand it to him! He did a good job declaring his views
ragarding ham radio
ande he may be right. Ham radio is shurely on the downslide and we
can't blaim that on the FCC. We have the internet now that welcomes
everybody so it wouldn't hurt us if the FCC gave somebody else the
frequencies. We talk of public service well looking at this newsgroups
work it would be better for the whole world if America got off the
bands because we are not liked anymore and this newsgroup does not do
service to America other than showing who we really are.

Your TS140S has dirty sliders.

Have you tried tuner cleaner in the works?

I had to do this same thing to mine a couple years ago, it fixed it so I
could at least power down to about 8w.

I have heard of guys even replacing the sliders. I have no idea where you'd
get them though.

I doubt that any efforts will prevail. Too many are opposed to it and those that are opposed are the younger ones and potential new Amateurs. I hate to see it go, as a requirement, cause I am a true believer that you respect more what you pay for in blood or pain and suffering and although that is a stretch to equate code with pain the principal comes through and I think that's why many are not wanting it dropped. Amateur Radio though is the last bastion for the code, I believe, as the Commercial Radiotelegraph license became obsolete years ago for the maritime service and I still regret never getting that license with radar endorsement for I think I'd be living a lot happier and fatter right now with some of the jobs I saw posted back in the 80's.

I thought the code requirement was effectively dropped when they reduced the required speed to five words per minute.

No he is being realistic. We have more CB sets out there than ham sets and they are no different to hams. If there is an emergency then CB ers would probably do a better job than hams and with less quibling. I think the writing is on the wall for ham radio since they dont provide a thing for the country It would be better if home security took over the frequency as we all now use the net instead. Have you heard anybody on the radio lately if you get my drify

>No he is being realistic

did you read his coments?

I think so

amoug his alegations were that code skill is related to intelgence
that it worked to filter lunatics (he himself disproves that one)
that oposing his views was proof of criminal intent

>. We have more CB sets out there than ham sets
>and they are no different to hams.

they are different not saying better or worse but often quite
different

> If there is an emergency then CB ers
>would probably do a better job than hams and with less quibling.
in local matters I agree with you in larger matter no the ability of
Ham radio organize nationaly is an advantage

> I
>think the writing is on the wall for ham radio since they dont provide

there will be more amateur operators testing for
tech then right to general at the same exam sessions.

More young and old operators will be using CW,
psk31, sstv, ssb and AM then ever before !

I compare CW to a 5 speed transmission (manual)

I use cw because I like it, I use the stick because I like it.

plenty of band space for all to use and enjoy,
use the mode you want not what others force you to use.

If you're accurately reporting what the BBC broadcast actually said, then either the BBC announcer was completely wrong, or was being excessively dramatic.

>Lets wait till Jan 16 or Jan17 and see what the follow up from
>FCC says.

Sure. And, I'll bet you credits to navy beans that they do nothing at all to forbid CW.

They've already posted their "report and memorandum". They simply have not yet *formally* published it in the Federal Register (which they have to do in order to make it legally effective).

Go read it.

The pending rule change has already been posted on the FCC site in its entirety. Go read it. It will probably be printed in the Federal Register about mid-January. It's effectivity date will probably be about mid-February.

There is nothing about banning CW. Matter of fact, it gives all Technicians the same HF privileges as the Novice & Tech Plus ops. Note that these are primarily CW privileges. The major thing it says it that element 1 (CW testing) is no longer required to for any class of license. It also corrects an omission on an earlier R & O about some data modes. There is nothing else in it. There is nothing about banning CW. There is nothing about changing band allocations for CW other than allowing the Techs the same HF privileges as the Tech Plus ops.

Generally before the FCC makes any significant ruling, they go through a lengthy process which includes an NPRM (Notice of Proposed Rule Making). This gives all interested organizations and individuals the chance to submit comments, data, concerns, etc.   There has NEVER been an NPRM on the topic of banning CW.

News agencies, since they are run by people, can make mistakes.

In this case you have the opportunity to read it directly for yourself rather than relying on a news agency. Why don't you?

Dee, N8UZE

There's still something called a RadioTelegraph Operators Certificate
(as opposed to a Permit or License), which requires 20 wpm. "Examinees
must copy by ear and send by hand plain text and code groups in the
international Morse code",
<http://wireless.fcc.gov/commoperators/exam.html>.

Are there any radiotelegraph stations still in operation?

Read http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf
in particular Appendix A beginning on Page 18. That appendix shows the actual rule changes to Part 97 that will take place on the effective date. Nowhere is the use of Morse Code prohibited, only the exam requirement.

This is the text of the pending rule action you are refering to. Nothing will change except that we will know the effective date once it is published in the Federal Register.

After the effective date, of course! :-)

For those that recall, this will be similar to the "paperwork upgrades" we
VE teams did after April 15, 2000.

Hi Joe,

The BBC was in error (or you misinterpreted what they said). Though
testing for Morse proficiency will end, the *use* of Morse will still be
allowed. Read for yourself:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf

73,
Bryan WA7PRC

Picked up an S38B to relive my childhood and it seems to work on AM about as well as my only other receiver, TS430.

I am going to make it my AM station receiver if and when I can get the
BFO to work. I still need the Kenwood to know where the Ranger is at.

I tried moving the E wire around as suggested in the manual but it did
not help. No heterodyne at all.

Anyone with any experience with this?

JACK K9ACT

Just for fun, try a kludge BFO. Place an AM broadcast band radio (non-digital) as physically close to the S38 as you can get it. Tune the broadcast band radio until you hear a beat with the AM or CW signal you are listening to on the S38. The oscillator in the AM radio should leak into the S38 to cause the beat. Course it depends on somewhat poor shielding on both receivers to work. I sometimes used this method as a kid to listen to SSB and CW on those old SW receivers that didn't have a BFO. Those were the days... ;)

hi

just wondering if anyone knows of a good usa based ''store'' that sells
high quality connectors like the ones found on the back of my mark v f

and the likke   6pin 8pin din?   and etc

as well as good quality mic connectors 8pin style

also the kenwood ts2000 13pin mini din

thanks

I believe I bought DIN connectors for my PRO II from Mouser- the best
machining I have ever seen in a DIN- unlike the usual stuff seen.

Do a Google search on the part number.
The second result has it for $6.00.

Kenwood TH45 440 HT with CTCSS. Antenna connection needs work. This is for
the radio with rubber duck only. The radio does work, please see the
pictures on my site.
http://mysite.verizon.net/vzequgiy/commctr1/id11.html
No battery or charger.

$35.00 plus $8.10 USPS Priority Mail

thnx

I really enjoy seeing pictures of the different radio equipment. Is
there a site that you guys
might know of that has picks and info about the differant radios.
People mention their equipment all the time in the different forums and
usually I don't know what they are talking about.I am a fairly new ham
and am trying to learn all I can.When someone says they have a
so and so type rig I would like to look it up and learn about it.
thanks

Actually, I already did that but it's a pretty academic exercise.

After all is said, seems like there should be some way to control the feedback to both provide a beat and optimize the gain/selectivity.

I have no interest in CW or sideband with this radio but I do need some way to set my ranger on the station I am listening to.

Any thoughts on an outboard tweak?

Thanks for the feedback. Get a lot more sleep now that I have swapped ham radio for astrophotography.

There's no control for it? That seems odd.

The trick is to make the cathode resistor variable, and use that to
control the level of regeneration.

Don't put it on transmit, but key the oscillator? Old rigs often
were set up that way, so you'd have a weak signal from the transmitter
to set the receiver to.

Or, they'd have some spotting function specifically for it.

Hi to all.

The power switch of my PA L-4B drake they are out of order .

I try a seller that it sells the spare parts for this amplifier .

You can indicate a vendor to me?

It is a lot important. thanks

piero

Well, you are absolutely WRONG and/or you have not read the ruling very well. What the announcement refers to is the elimination of Element I as a requirement for a US Amateur license. There is no "prohibition" against the use of Morse. BBC is mistaken, and since when has the news media gotten a whole lot right in reporting the news? US Amateur still may certain use CW to their heart's content, and, indeed, with the exception of the changes announced prior the CW ruling, the allocations for the USE of CW remain in place.

I suggest you go back and fully read the actual announcement where you will find that a "prohibition" against Morse Code is a myth.

Why are you so dead set that CW is prohibited in the US. Since when is BBC
the "authority" on what our FCC does?
There-is-no-prohibition-on-the-use-of-morse-code-in-the-USA!!!!!!!!!!!!!
Some folks just can't READ!!!! :(

Everyone has told him this and posted links to the actual R&O on the web
page. He absolutely refuses to compare what it says to what the BBC
reported. I suspect that he wants it prohibited and so is indulging in
wishful thinking.

The simplest way I can think of is to go over to the shelf of test equipment and grab the old Heath signal generator and attach a foot long wire close to the S-38. Then tune the generator to 455 kc (whoops, that is kHz). You will have a nice beat note.

Like the others have said, convert the if stage into an oscillator - then reduce the feedback to get it to stop oscillating. That will then be sort of a Q multiplier while in the feedback but not enough to oscillate stage. You would need a control to put in and out of oscillation. A pot, a variable capacitor or a switch.

Or, just a hum a few bars into the Ranger mike and tune for best audio.

73, Colin

     Also www.eham.net. Lots of reviews, but the pictures are smaller than
rigpix.

This is a curiousity question only - I'm not wanting to actually program this radio - but...

Does anyone know how this radio is programmed? I don't see any kind of connector for a computer, and a look at the schematic shows it can't be programmed through the external speaker/mike connectors. (unless they're doing something REALLY ingenious!) The schematic also doesn't show an obvious programming connector, though I may be missing something involving test points(grin). There is no keypad, so it can't be done that way. The service manual (as found online) doesn't address programming at all...

Thanks for addressing my curiousity, and for tolerating a slightly off-topic (since this is a commercial rig) post!

Motorola Radius M216 VHF 16 channel 150-174mhz, 25 watt. Model#D33LRA77A5BK
Serial#778FNU0605 I can NOT program this radio. It will do the Amateur 2
meter band without a problem.
It is in good working order and ready to be placed into service. You get the
radio, power cable and mic, no bracket.

You will need to take a copy of your CSCE and a new exam Fee to a VE
session.   Fill out an applicaiton for General Glass.   This is a paperwork
upgrade that the VE must do. You will not automatically become a General,
you must sumbit the paperwork to get it.  However once you have filed the
paper work you then immediatly have General class privilegdes using a /AG
suffix to your call.

This seems like a good time to introduce one of my other life-long hobbies. In 1955, I accomplished one of my first major life goals. I passed all the tests for an Amateur Radio License. It was just the entry level "Novice Class" license but it allowed me to "talk" via Morse Code to people all over the world with simple equipment that I built myself.

Check the link at 1030 EST Dec 26 it appears to be broken. I am interested in seeing it since I was licensed only a short time afterwards. My ticket issued Jan 56, but test done in 55. I was then

K9CAH so I was also licensed in the MidWest in Wisconsin. I was
13.

I've just bought a nominal 150 Ohm Z Shure dynamic mic & I want to use
it with my FT-897, which expects a minimum 200 Ohm Z. Is there a good
impedance matching circuit out there that I could build? Do I need to?

Thanks.

Name: Kirill
Call: VE3AXC

Merry Christmas and Happy New Year everyone! I will be a subscriber of this forum from now on, so nice meeting everybody!

On this note, please allow me to stray a bit off this forum's topic but my info might still be relevant for some. I myself have been a ham for 8 years; also run a small QSL card printing business (my printishop is located in Toronto, Canada) and have a web site specifically dedicated to that www.qslcanada.com

Reason I would like to post this message on this forum is to let your group know that I have a pretty good group referral discount program.

The idea is quite simple and there is no catch.... For each HAM who is referred by you and who wishes to place an minimum order of 500 cards, you would receive 100 (custom designed) cards of the same type free of charge. The offer is transferable, so if for example you let me know that you don't need any more cards, I will be happy to print additional 100 cards for your friend free of charge (or charge for 100 cards less)

This offer may be ideal for your group or a club you belong to. For example, if you
refer say 3 HAMs who would like to print a minimum 500 cards for themselves, you would receive 300 cards as appreciation for spreading the word about qslcanada
; you could transfer it to someone as a gift ; or each of 3 Hams would only pay
for 400 cards, since each one will get 100 cards free. To sum it up, each of the referral counts as 100 free cards in any shape or form.
Pse let me know if you have any questions.

So if bunch of Hams in this group who are into QSLing might be interested to giving someone a free gift or getting a good deal on the

next batch, pse let me know. The offer is valid any time in future.
www.qslcanada.com has quite a bit of samples, more info and e-ham
reviews

PS Have got to mention this, since it did happen before, where some
folks took this posting too personally. I just wanted to get this info
out there ONE TIME ONLY! Please don't call me any spammer names or hate
mail me. I believe this to be a fair group offer any hams by hams
enterprise deserves a little exposure to start out with.

I will try to participate in this group from now on, so best 73 to
everyone! Happy New Year!

I would suggest FIRST, making sure you have the latest firmware for the D-Link router.
Know how to update the firmware properly -- it is covered on the D-Link web site.

Sister had a wireless D-Link router and the update/upgrade of firmware seemed to quiet down the RFI. Likely a poorly written piece of code by a programmer -- who has never heard of RF.

No, a 604 is a wired router, I would suspect it is a poorly wired or bad cable
that is a multiple wavelength of that particular frequency... I use the 604
(non print server) and 614 (print server) routers with no problems at all.

There may be multiple revisions of the 604, with significantly different internals. I've had similar RFI problems with some routers and WAPs, and have concluded that some of them use buck-mode voltage regulators (DC-to-DC converters) which put out strong harmonics of their switching frequencies. Similar devices from the same manufacturer, a year or two newer or older, don't have these emission problems... I believe that the voltage converters in the trouble-free units probably incorporate a "spread spectrum" modulator on their switching oscillator, and thus emit a broad-but-low level of RF hash rather than discrete birdies.

Try to connect a MFJ-929 and a Yaesu FT-857. Use a MFJ-5114Y cable to connect.
Which parameter should I select on both for start tuning process by push the

tune button on tuner?

When select tuner on transceiver and the right transceiver selected on tuner nothing happens.

You'll need to inform the FT-857 that it has a CAT-compatible tuner
attached. Check your owner's manual. If I recall correctly, there
are two menu items that you'll need to set. One of them tells the
radio that there's a slave CAT device attached, and the other tells it
to talk to a tuner via the CAT port.

Seems to be a problem with low budget web hosts. Good news is it's up more than down.

When I select a tuner on FT-857 options, CAT type option turn automatically
to tuner and isn't changeable.

Since I try to connect and several options on this tuner, think I notice a
burned smell coming out from this tuner.
Works normally, maybe some device burned down by using any wrong option on
this MFJ-929.

I just tuned into this News Group to find some and not all ham's like to speak better of there self's than they act.
I thought that was why people became Ham radio Operators and had gotten away from C.B. God I hate that C.B. I get sick thinking about it. I've been a S S B Radio Operator for a long time. Yes I prefer to that think that there are Three types of Radio. No need to go there and get my but kicked by the know it's on here. It has been said so many times no matter what the Hobby. There is always someone out there trying to take the fun out of anything good. And I just seen some of them here. I have been wanting to become a Ham operator for I'll bet at least 35 or 40 years. The code has always stopped me. And the But head's and those with attitude Overly goody two shoes crowds. I have a learning disorder. It does not make me retarded, it simply means that I learn better for me in a hands on manner. Code is plainly just to much for people like me.
Now My point to all this is once again I'm hanging on a tread, I just don't know why I would want to go into Ham and put up with these too kinds people when I'm already doing it and I don't like it any better now. The only plus that I can see at this point is more Frequencies. Ham was a Hobby that was intended to be HELPFUL IN ALL OF IT'S ASPECTS..........
Now look what it's coming to. Some don't want the no Code, other's do and if they remove the code I'm afraid it will let in all the nut's .Well my friends you folks all ready have them. And in the mean time your keeping Good honest people out. Honest people aren't Born........ It takes a Very strong willingness now days to be one.. Ask me it's hard and we don't always win so . Your art form, your hobby no matter what your calling it today is steadily going by the way side. And some of you are so caught up in yourselves that you just can't see it. Some of you are the Sign of your time. I'll Bet there are a lot of old timer's just shaking in there Graves at the way you have been presenting the hobby that they helped to grow. Kind people used to run the Ham band's and there are still some out there are you one of them. Or do you just think you are Action's speak louder and farther then the Air waves. I'm not even a Hammer and I can see that...... I'll be listening......

Hello all,

I've googled this and found nothing. I want to disable the

CW sidetone, or at least turn it all the way down on my Kenwood TS-440. I use the sidetone in my keyer instead, and the two clash!

Anyone know if this can be done without hacking anything up? Like a DIP-switch or similar? Or a hidden volume pot?

Thanks

Dave WB7AWK

Just got word on the BBC last nite that CW is now non exitant in the US amaterur system. For info BBC takes over from PRI at 1000z each night except Sat/Sun at 1000Z and their second item they cent CQ CQ CQ several times then notified the world that CW is no longer allowed on the American Amateur bands at all. Listen in low end of the FM radio band and its the 2nd stn from the bottom which is (public radio) but changes to BBC at exactly 1000z and carries them every night except Sat and Sun.

Look for VR9 in the service manual to turn down the side tone output.

Its the only way that I can see to accomplish what you want.

Nah not really - CW is live and well -- just check the CW portion of the bands.
Remember lots of Hams don't speak each others language - but with CW and Q-Signals they can communicate the essentials

Also thousands of Hams are active during CW contests making hundreds and thousands of contacts

You really meant the requirement to pass a CW test to obtain a license is being phased out

This by no means will eliminate CW as a mode of Ham operation.

You have not heard correctly. The FCC dropped the requirement,
but it is VERY MUCH legal to use on the amateur bands. I'm on every
day on all useable bands with CW and perfectly content using it.

Thanks for the info - right after I posted it, I found that myself as well.
That
indeed will do the trick - now to find pot VR9 on the IF board.... hopefully
it isn't too well hidden (why didn't they bring a Sidetone volume out to the
front or rear panel? I can't be the only one who doesn't like the sound of
the Kenwood sidetone!)

Might be better to turn down the sidetone in the keyer. If you were to ever
use a straight key, you would need to turn the radio side tone back up.

Dee, N8UZE

Do a search for a tech manual, and look for cw side tone adjustment..
The tech manual shows how, and location of pot...
There are several on google that I found!

Good thought. But actually I normally monitor my CW on my R5000
receiver that sits next to the TS-440. But I will give that some thought.
Thanks for pointing it out...

Remember that D-Link (and Linksys) will change the hardware chipsets within
a model number.  For example, one product has 5 different chipsets /
versions depending upon version number and serial numbers on bar code of
product -- SO a clean model may be a different version from a dirty RF one!

Very FEW things are automatic -- just due to a rule change.
When is anything in government automatic?
You don't get US social security -- unless you file the paperwork !
Most state drivers licenses are not either -- these days !

You have to take the initiative (to FCC and VE representatives) that you are
still alive and
you are still interested (passion and desire for "radio art") in becoming
licensed radio amateur.
"Radio art" is the FCC words from recent R&O -- it is NOT a cell phone, CB,
or FRS radio service.

How about improving the 440 by a simple mod. Find the value of the inside pot, remove it, run some wires to a convenient spot and install an outside pot/knob like it should have had in the first place. You're not one of those guys who doesn't like to drill holes are you... ;)

hehehe - NOW we're talking! I consider myself a rebel (and lots of building
experience - "professional driver on closed course"). THAT is what I shall
do!!

Dave

You will have to take your paperwork into a VE session, pay the session fee,
and file the paperwork.  You can do this at anytime AFTER the effectivity
date of the rule change.  It has not yet been published in the Federal
Register so the effectivity date is not known.  At the time you file, your
CSCE must still be valid (i.e. not more than 365 days old).

My question is, how can I drop the power on my TS-140s? I am all cw op
here and seems on cw its either all or nothing, a slight movement of
the rf slider brings it up to over 100 watts and its hard to control
the lower range. I would like to max out at around 50 watts.

Any ideas?

Thanks, Gil

------------ REPLY FOLLOWS ------------

I'll bet there are even more newsgroup users who are tired of people posting messages that have nothing to do with the topic of the newsgroup.

I'll spell it out for you: The three newsgroups you have posted to have nothing to do with a "moment of silence". There is newsgroup which is a catch-all for amateur radio related items: rec.radio.amateur.misc.

Now that you know, I trust you will post correctly in the future.

Bill, W6WRT

Howard-

I have a brand new Kenwood TM-742 that does it. I took it apart, thinking the battery might be bad but it wasn't. Then I noticed that about half of the plated-through holes on that circuit board weren't! (You have to use a magnifying glass)

Apparently temperature variations inside the car sitting in the Florida sun, causes shrinking and expansion of the circuit board, so parts that normally touch open up, removing battery power from the memory.

Perhaps it will solve the problem if I re-solder the holes with a tiny wire to connect top and bottom of the board. Unfortunately some of the holes are blocked by components on one side, and my soldering iron tip is much too big.

Either the BBC was wrong (very wrong), or you misinterpreted what the
BBC said.  Nobody has forbidden US hams to use CW.

You can find out the facts by surfing to any of a number of Web sites,
the "WWW.ARRL.ORG" site being the most obvious first choice, I think.
```

Take a look at the following band-plan chart, updated only two weeks ago:

  http://www.arrl.org/FandES/field/regulations/Hambands_color.pdf

You'll see that CW is an authorized mode for U.S. hams in *every* portion of *every* ham band, except for the USB-only 60-meter band.

Or, download the following:

   http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf

which is the actual text of the FCC Report and Order.

Here's the situation as I understand it:

[1] In 2003, the WRC conference declared that member countries would no longer be required by treaty to insist that hams be proficient in Morse Code in order to transmit on frequencies below 30 MHz. It would be up to each individual country government to decide whether or not to require code proficiency.

[2] Quite a few countries quickly adopted rules changes, so that their own hams could have HF privileges without having to prove that they can use CW. In fact, Great Britain (home of the BBC) dropped the CW requirement some time ago.

[3] After a great deal of discussion, the FCC has decided to follow suit. In a month or two from now (probably), the rules change will go into effect, and it'll be possible for US hams to upgrade to General or Extra without having to pass a Morse Code proficiency test.

[4] Nothing in the FCC rulings forbids the use of CW. Period.

[5] There are still many CW contacts, contests, and nets taking place between US hams. CW remains one of the best available modes for making contact under weak-signal conditions, and is probably _the_ best such mode when you don't have computer assistance available.

Now, there was a different FCC rules change recently... one which was announced a few months ago, and actually took effect back on the 16th of this month. This "omnibus" change made a change in the band-plans for several of the HF bands. It had the effect of increasing the portion of several HF bands in which phone traffic can be carried, and reducing the portions of those bands which is *reserved* for CW and other narrow-bandwidth modes.

However, it's still legal to for US amateurs to use CW in the "phone" portions of the band, although most refrain from doing so except under emergency and other exceptional circumstances.

That was a very informative reply regarding the whole homebrew thing. Where CAN you find good circuits to build, by the way? I saw a cool schematic for an all-tube general coverage reciver, but on the same site was a harmonic-ridden two tube transmitter schematic. One band, no less.

I'm trying cook up an interesting homebrew project. Any ideas?

Washington D.C.-

It was announced today that Kellogg's and the Federal Communications Commission have signed a pact to issue Amateur Radio Licenses on specially marked boxes of Corn Flakes.

In this unprecedented move the FCC believes this will not hurt amateur radio but allow all individuals to receive an Amateur Radio License without having to demonstrate any skills with the exception of being able to use a pair of scissors to cut out their operating permit from the breakfast cereal box.

Kellogg's spokesperson commented that they were proud to have been selected by the government to be the issuer of licenses for Amateur Radio in the US and hope to soon make an agreement with other cereal loving countries. They also expect that will be issuing certificates of achievement for DXCF for confirmed contacts with 100 corn flakers.

Yep, geting rid of the insults just might result in more folks joining the
ranks of amateur radio.

Well, it's not that extreme. Is AM gone? (No, it just isn't very popular among the current crowd.)

Is RTTY gone? (No, it just isn't very popular among the current crowd.)

Is packet gone? (No, it just ... etc, etc, etc)

I'm going to quit now before I get too obvious :-)

"Sal"
In total agreement that radios-r-fun.

1KW, 2HP high revving 2-stroker --- lotsa luck with voltage regulation and AC frequency stability.

It's junk.

I didn't mean CW was "gone" in the sense of no longer able to be used! I meant only in the "testing" - which has spawned months if not years of hateful arguments - so it is pointless to remain at odds with others over it. Sure - CW, AM, RTTY, etc - are still all there to be used and enjoyed by those with personal preference. And as well - they should be! Use them to your hearts content!

True, but it was a little wide.

OTOH some power companies run great spark transmitters.

No it made me go down to RadiShack and show one more time how to
"lock" it.  Use the MENU key first and tab thru its various
offerings until you reachthe "lock" key.   It was so tiny and
did'nt look like a lock key, just a black spot on the top of
the screen.    So now I got it locked and alls well.
                       Joe

K9YA Telegraph
The Good News About Amateur Radio

January 2007 marks our fourth year at the K9YA Telegraph.

As we wrote at the completion of our first year:

"Our success derives from you, our large, enthusiastic and devoted subscriber base worldwide, and to the writers whose contribution of personal stories-at once fascinating, humorous, enlightening and compelling-made the Telegraph staff's inaugural year one of consistent joy and fulfillment."

That truth remains unchanged, but ever more encompassing as more of you, drawn from the international ham community, have joined the Telegraph readership and lent your experience to enlighten, evoke and entertain.

The Telegraph staff continues in its fourth year-as in our first-ebullient. Thank you for your messages of praise and encouragement, and remember: we're always on the lookout for your good story, or two.

Download sample issues and subscribe for free at http://www.k9ya.org

Hey all,

I'm trying to clean out the parts cabinet. So free shipping on all orders until I say otherwise.

My parts are new, but old stock spurplus. They are not pulls, and they have never been used. Most are gathered at hamfests, and some are gathered from eBay, some from surplus auctions, some just show up.

See the website below for details.

In anticipation of the C & G eventually sending me a copy of my RAE I am going to purchase a QRP rig. The choice for me is between the Yaesu FT-817ND or the ICOM IC-703. Given that I live in a flat in a fairly built up area and that I will have to use a loft aerial then the difference between 5 & 10 watts is not really significant. I have enough loft space to construct a fanned dipole for 40 through 10m but also intend to do some portable & narrow boat operating.

I would be very interested to hear other peoples' experiences of these rigs, particularly with regard to the HF receivers on each rig and especially if anyone has used both. Currently my main interest is HF DX but I'm sure I will want to explore 6m and later on 2m.

Charlie.

Please welcome our new friend, Amateur Radio! Amateur Radio was recently
reborn when the FCC finally agreed to remove the old outdated morse code
testing requirement to get an amateur license. This was something 20
years overdue. But now amateur radio can experience a rebirth and
reinvigorate itself.

CW can take its place among the other amateur radio modes which never
required any special testing. Now CW is an equal among them.

Welcome - Amateur Radio - back from the dead and dying!

Can someone please tell me what is a fair price for a Pakratt 232, in
excellent condition, with manual and cables ?

Thanks and best regards,

Art

Hi There,
Many thanks for reading this request.
Can anyone recommend a CAT program for principally the Yaesu FRG-9600
scanner (if it included CAT control of my TS-940S, it would be perfect!).
I want to be able to store sets of frequencies and get the rig to scan them,
etc.

Obvioudsly, the cheaper the better and must run on a PC.

Many Thanks and I will look forward to any suggestions.

Robert (GM0CSN)

I'm having trouble with a SWR Meter on a 2995DX Ranger.
The meter movement is non-existent near the operating frequencies.
It moves when the calibration knob is rotated to the SET.
But after that.... zero movement during the SWR function.
I can force the movement if I rotate the calibration knob
during the SWR function though. I have followed the test
instructions according to the instruction manual.
> mode= AM
> MIC GAIN= min.
> RF POWER= max.
> P-t-T>>> Calibrate---pointer= SET
> ACTIVATE SWR button.
> P-t-T and read directly on the scale.

Any suggestions as to what I'm doing wrong?
This is a newly purchased unit from a private party.

I passed my general written test 3 months ago, but failed the Morse Code
test. Will I be able to automatically upgrade to General once the rules change
or do I need to take a new general written Test?

As I understand it, neither.  You'll need to go back to a VE session,
bring your CSCE (the certificate which documents the fact that you
passed the written exam), pay another exam fee (probably), and have
them submit the paperwork for your General.  The CSCE remains valid
for one year after the date on which you passed the exam.

So, it's not automatic, but you won't actually have to retake the exam.

Likewise I'm using a D-Link with no problems.  The 144/440 rig sets
about 3 feet from the router and the CAT5e gigabit network cable runs
along with the coax for a ways and then parallels it for another 40 to
50 feet.

I can set a 2-meter HT here on the desk and it'll work just find.  If
I move it up against the computer cabinet it'll just open the squelch.

Hi,

I bought my VX7-R secondhand about two years ago and it has always had a problem with the squelch.

Even with the volume set to zero I get a 'thump' noise as the squelch operates. It sounds like a dc level is set wrongly somewhere in the squelch mute/unmute circuitry or a cap is slowly decaying and no longer blocking the dc.

The noise has become noticably louder over the last year and is now uncomfortably loud when using an earpiece.

If I had a circuit diagram and board layout I could probably fix this myself but I can't locate either.

Does anyone have a fix for this problem or the necessary diagrams?

Thanks,

Paul

There's a new TOM SWIFT group, and you're invited!

Remember this thought provoking youth science and technology fiction series?
Here is the place to meet others that were fans also. The address:
http://groups.yahoo.com/group/Tom-Swift/

We would like to invite you all to join a new Tom Swift discussion list,
launched this month:
This is a friendly gathering place for fans of any or all of the 5 Tom Swift Series written over the last century under the pen name Victor Appleton. Any aspects of the books and related materials are fair game, including discussions of the stories, collecting, fanfic, model building, historical and scientific context and anything that might be of interest to "science minded boys" of all ages.

It is our intent to keep this as open a list as possible with only enough moderation by diverse group of moderators to maintain a friendly environment. Polite and civil debate is welcomed and encouraged.

--
Thanks Ed Sharpe archivist for SMECC

I am actually surprised to find out it was/is Vince. He's an O.K. guy,
puts in volunteer time and is very knowledgeable. While I firmly believe
this alter personality detracted from Amateur radio (Slow Code),  Vince
has done other things to advance it.

Although I know Vince is very pro Morse code, I am having trouble
believing it was him (being Mr. Slow Code)

If it was/is him, turning in his license would only be a detriment to
the community IMHO.

we can do without any ham that behaves as Slow does and without any
ham that would claim to be slow code wether he is or not

How do you know Vince, I mean other than a seeming like a, unbalanced at
times, Morse code advocate?

that is How I know though his insane staement during recent his all
but incessant diatrbe of insult many derected at me by name

the Gay bashing and the bashing of the disable the tech indeed all new
hams of anysort

the person known here as SC is insane and inhumnne nutjob

if Vince in he then vince is not someone I care to know further, Vince
is merely claiming to be SC I still don't want to know him

Hi
I'm looking for an online source for a manual for a Douglas Microwave
Company Wattmeter, TS-1285/URM-120. User or service manul will help.
TIA
Harry

Wow, read through some of your blog and other pages your blog refers to.
You are quite the lighting rod. You should not be surprised to receive
much attention any many areas.

Best of luck to you.

Chris KC8FRJ

attention is one thing

but your "friend" (or the person you are speaking well of) has in the
last few managed to insult over 300,000 of your fellow hams and likely
the future of Ham radio

sadly in America it is acceptable to blame the target of the attack
your "friend" is one those people he has stated he would rather not be
a Ham than Me allowed to use HF I sugesst he consider following
thorough on his words
>
>Best of luck to you.

luck I don't need

I can if needed make all the luck I need

Would anyone happen to have the manual for a radio shack htx-212 2 meter
rig in either pdf format or in .txt? I am blind, and need to try to figure

out how to set the pl tones on this rig. If you have one, or can point me
to a web site, that would be great. Just e-mail to this address.
Dana@panix.com Tnx.

Hopefully someone can read it for you as I don't know that text to speech
can read this PDF.

```

Notice: Effective January 1, 2007, BAMA will add only manuals with a direct connection to the tube era of ham radio. Only manuals for amateur radio transmitters, receivers, antenna tuners, antennas, keyers, etc. will be added to the collection.   The only test equipment that will be added will be those items already listed on the "Needed" list and those items created especially for the amateur radio market.

While I appreciate all the contributions of those whose interest is in
test equipment and military equipment, I simply cannot continue to
expand the BAMA collection in these areas at this time. I will not be
removing the test gear and military manuals currently on BAMA. The
BAMA collection will remain intact. I just won't be adding to these
areas for the time being.

I want to thank any and all of you who are reading this and have
contributed to the BAMA collection. Without your time and effort,
BAMA would not have been possible. Thanks again and best wishes to
all for the holidays.

73,

Ken K4XL

I have a like new Sig239 9mm with the silver highlights, three clips,
fitted holster.

```
Fewer than 150 rounds through it

Will mail to the FFL of your choicein exchange for a TS50 with tuner

SC residents can simply exchange

73's Fred

Well bozo, this isn't a buy and sell newsgroup, it's for the discussion
of amateur radio equipment.

And even if this was for buying and selling amateur radio equipment,
you are selling guns, which makes it doubly off-topic.

Hi all. Just wanted to say thanks to everyone who responded. I got the manual, then got it into .txt then got a ham to look for a picture of the rig on the net so he could tell me the button layout. I got all my pl tones in and everything is rorking just fine. Thanks from Dana in Griffin, Georgia. n4pge.

I just came across an ad for these generators:

http://www.portable-gas-generator.com/

1kW, $163

Seems too cheap. I'm a big believer of "you get what you pay for" --
generally. Has anyone any experience with these? Thought? Comments?

well 2 cycle stuff is often ok but a pain to be around when it is
running in household with a few cheapinverters and marine batteries it
serve very economicaly in an emergency

It's a pretty small generator. In price per watt, it's a bit more expensive
than our 4400 watt Coleman, which cost us $500 on sale. For small, emergency
related things, I'm sure it's fine, but don't think you'll run anything like
a heater or microwave from it.

I guess repeaters in general, whether it GMRS, commercial, or Ham, will still use CW identifiers, they even use it on satellites.. It seems strange, but it will be that way for a long time.

```

I am currently using a Drake L-4B and am very happy with its reliability and compact dimensions (the PS is packaged separately and sits on the floor in back of the equipment table). However, the L-4B was not designed to operate on 160, 17, and 12 meters.

I have run across two companies with almost identical equipment - QRO Technologies and Command Technologies. I have been told that the companies at one time were one and the same. Anyway, both companies make similar amplifiers
QRO HF-2500DX http://www.qrotec.com/index1.html

Command HF-2500 http://www.command1.com/hf2500.asp

The outside dimensions and weights are slightly different. Does anyone have any comments on these two amplifiers? I am especially interested in quality of components and construction along with ruggedness. Factory support is also an important factor. Finally, I have noticed that QRO Technologies must have sold so much equipment prior to Xmas that they have gone South until 1-Apr-07. See http://www.qrotec.com/

Any comments or advice will be greatly appreciated.

John, N9JG

Listening to the bands these days I have come to the conclusion that
many Keys have indeed become Silent although they are not physically
dead.

And yes, when more code operators die they are just as dead as any
other amateur radio operator who has passed away.

FWIW - when one "presses the mic button to talk" - they are considered to be "KEYING" the mic. Therefore - anyone who is a ham - be they a "code" key user OR "key" a mic - would still pass as a "silent "key" "
The code is GONE - there is nothing we can do about its demise - so lets start PROMOTING decent Radio Skills - beginning with the vanishment of insulting amongst the ranks first off - and those who "might" be considering coming into the hobby.

Since my original posting I have learned that the Commander HF-2500 uses Eimac 3CX800A7 triodes, whereas the QRO HF-2500DX uses Svetlana 4CX800A/GU746 tetrodes. Some sources have stated that the IMD figures for the Eimac triode in a grounded-grid configuration are better than the Svetlana GU746 tetrode in grounded cathode grid-driven mode.

well said indeed althought still maintiain I will an SK only over my dead body

and Intend for that never to happen even have a plan to carry it out chinese say "man who finishes house dies" therefore I will never quite finish my home and live forever

but seriously the attiudes and "proCoders" were one of the biggest things working in favor of NoCode

Code use is now in the hands it should be in those that suport it . well on second even I, and I do hate the mode personaly would wish it a better fate than its supports are likely to contrive but for good or ill it their problem not mine

but insulting those you are requiting ro seeking to convince was never a good idea I hope they learn that soon

I have owned a QRO HF-2500DX since 1997. I have never owned a Command, but know many who do.

The QRO uses Russian GU74b/4cx800a tetrodes, whereas the Command uses 3cx800a7 triodes. The Russian tetrodes are Russian mil spec, and have been in good supply at extremely low prices over the last 5-10 years (though they seem to have gone up a bit lately) whereas the Command's triodes are still pretty pricey. My impression is that the money saved on the tubes has gone into a more robust power supply and band switch in the QRO.

If I had it to do all over again, I would again go QRO.

It stays on the desk.  If you want a lot of transformer, the result is
a lot of weight.  I might add that, while the tune up process is a
little different, this amplifier has highly repeatable tune settings,
so you just keep a little cheat sheet to tell you the tune and load
positions for each band.

Seriously, thank you for your comments. I am not sure how soon I will move
on getting an amplifier like this, but right now the HF-2000DX is at the top
of my list. This amplifier got very good reviews in eHam.net.

David-

When you have a home power failure, you will need more than a 1 KW generator. Your refrigerator may use less than that when running, but its compressor's startup power requirement is probably well over 2 KW. The little generator might be nice to have camping, but not for emergency home power.

This little generator would be useful for running something like a chain saw or some lights, but not electronic equipment. The power might appear to be adequate to run a couple of rigs at Field Day, but the regulation/power spikes could damage your equipment.

I saw a comparable small generator at a Big Lots store for $150. At first I was quite tempted. I researched the Big Lots "Pro Source" generators, and only came up with the fact they were sold at Big Lots. Big Lots does not have any service parts, so where are you going to get a new air filter when the time comes? (You may be lucky and find another brand's filter that can be cut to size with a pair of scissors.)

Perhaps it would serve as a toy to play with and then discard.

Fred

John,

IF I remember the old web sites both companies had a few years ago --
shortly after the split --
one took the TRIODE route (Commander) the other (QRO) the TETRODE route.

The rest is amateur radio history!

Don't have any first hand experience with these, but in general I can say that 1 KW is not much power. 2 Stroke motors also are noisy, not very fuel efficient, usually hard to start and are not very reliable. 2 Stroke motors are very light for the horsepower they produce through so I'll bet the whole thing is very light.

The price is attractive considering it's about 50% of the going rate for that size..

Jhon ,

Did you take a look to Acom-amps ??

I had the Acom 1000 and now the Acom 2000 with a lot of joy.
I made some nice pics of both amps and you can see them on my webpage :
http://www.pa3hgt.nl

```

Oh good, a sense of humor. I was beginning to worry.
At least QCWA won't have to change anything for 25 years.

Hans, thanks for the information. The Acom 2000 appears to be an advanced amplifier and has received vg reviews on eham.net. It is difficult to find pricing for this amplifier, but from what I can tell it is at least $1500 (USD) more than the QRO HF-2000DX. Of course the Acom 2000 has many additional features (and complexities).

BTW, you have a very interesting website.

Hello John,

Thank you very much for the compliment.
The website is only in dutch 'cause my english is not so good but a photo
says more then 1000 words i think.
Acom 2000 amps are rare too find on the second hand marked.
For more info ... ask your friend Google , HI.

 Did it make you want to give your FRS a Botox facial? Try not to get any on
your echo mic.

I have bought two flavors of WWV-synced clocks recently at the big box stores. One was a small unit (2-inch display) and the other was a large analog wall clock. Both of them work great, even though one is on an interior wall in the basement. I'm truly amazed that they can hear WWV and yet the cost was under $20.

If the radios are plainly marked FRS on the model plate, they can be used on any of the frequencies without a license. If they are GMRS models, you need the license ($75) due to higher power. If they are GMR/FRS models you "may" not need license if the radios are used on FRS channels "and" the power is rerstricted to 1/2 watt ERP (About 2 watts output). I suspect yours are of the GMRS/FRS variety.

The range claims of the manufacturers are BOGUS. If they work for many blocks in an urban environment and about 2 miles over flat terrain, you are getting your moneys worth.

As far as the "POLICE". 1) If you are in Canada there is some overlap with GMRS and police on a couple of 25KHz spaced channels channels. 2) In the US some police departments installed GMRS base stations in past and even so with an FRS radio or properly licenses GMRS radio, you are free to use the channel, however. 3) You might want to change channels to avoid a dispute, simply because they have guns and hancuffs. 4) If your radio can operate on a GMRS repeater (transmit +5 MHz), you need an FCC license AND permission of the repeater operator to use their repeater.

What model do you have?

I think there is some confusion between FRS Radios and GMRS Radios and some
units cover both.

First read about FRS Radio From The FCC
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family

Then read about GMRS Radios From The FCC
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Then read about the dual service radios
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Hope this helps
CL

Both Joseph Fenn, and CL responded with good information. That leaves me with nothing to add, except that so-called response from the "Police" was highly likely to be some jerk out there listening in with his own FRS radio. Just change channels to avoid such types.

Ed K7AAT

PS: J. Fenn, pretty nice credentials you have..... !

THE-RFI-EMI-GUY <rhyolite@nettally.com> wrote in
news:457CD60C.3090405@nettally.com:

> If the radios are plainly marked FRS on the model plate, they can be used on any of the frequencies without a license. If they are GMRS models, you need the license ($75) due to higher power. If they are GMR/FRS models you "may" not need license if the radios are used on FRS channels "and" the power is rerstricted to 1/2 watt ERP (About 2 watts output). I suspect yours are of the GMRS/FRS variety.

Likely because they aren't "WWV-synced".

While in the past there were some clocks that got the time in digital
format from WWV, the more recent wave of "atomic clocks" receive WWVB
at 60KHz. The low frequency allows for strong propagation throughout
much of the day, and penetration where higher frequencies might
get shielded out.

Sure... if you're up at 3000 feet on a mountaintop, with a clear view
to the mountaintop on which the other person is standing :-)

More commonly, in a city or in the woods, FRS radios will work
tolerably well for a quarter-mile or so, often to half a mile. Beyond
that, they're marginal to useless.

If you have a GMRS (license-required) radio, which actually puts out a
full 5 watts or so on the GMRS channels (and *very* few of the
dual-mode radios do) you might go a couple of miles in city terrain.
Most of the dual-mode radios have no more power on the GMRS
frequencies than on the FRS and shared frequencies.

Claims of 7 - 14 miles for these radios are sheer marketingbabble -
they're incredibly optimistic.

>When my wife was trying to reach me from a shopping center about
>10 miles away she did find a spot that worked. But next time

The FCC itself almost certainly was not monitoring.

It might have been the police. Or, it might have been someone from a
community emergency preparedness group (CERT, or perhaps REACT) who

was monitoring and who was willing to call the police on your wife's behalf. Might even have been an off-duty policeman who keeps an FRS radio around to speak with her husband :-)

This FRS set came in a 2 unit package on sale for 29.95 for 2 of em.
And the instructions were explicit.  I called the FCC at Washn
just to find out which chnls were restricted to fcc license and
which were not.   1 thru 7  do require FCC license for useage
and cost is $75.  8 thru 14 If I remember correctily were free use
no license required.   15 and up were also restricted to FCC
licensing.     I parked on 12 and have been useing it with no
no problems as long as range did'nt exceed about 10 miles.
Instructions said limit was 7 miles coverage for the free chnls.
For the FCC chnls the range is 14 miles and the ouput power is
more than the free ones.  My wife even on chnl-12 was calling
me but could'nt reach me from about12 miles away, but lo and behold
the Police answered her and asked if she was in trouble.  I had no
idea the 911 people scanned those freqs too, but apparently they
do.    Thats a plus far as I can see.
                           Joe Fenn

The "limit" has nothing to do with whether it is free or licensed. It is strictly a function of physics, terrain, and power level. If you actually get 7 miles or more, you are incredibly lucky. Under normal conditions, one mile is more like it.

> For the FCC chnls the range is 14 miles and the ouput power is
> more than the free ones.

As stated above, the range doesn't depend on whether they require a license or not. Since more power is allowed on the GMRS channels, they will have a slightly greater range. Still though, unless there is a GMRS repeater (relay station) around, the nomal range is well below the touted 14 miles.

Joe says again,
I bought them (2) in a plastic pack on sale at radio shack
2 weeks ago and they said FRS.  $29.95 on their big sale day
last week Saturday.   I read the data sheet that came with them
and the ranges quoted are (for the free chnls) 7 miles.  Chnls 1 to 7.
and think chnls 15 on up are FCC license required. Fpr the Licensed
chnls the range is 14 miles.   I chose 12 and locked both units
to 12 which is free useage.   I still wonder how the 911 crew
at Hawaiian Telcom got into the act but they did.  So must be
they monitor even the license free chnls.  I can understand if
they somehow have a scanner working on the licensed chnls thats
a good idea for sure.  You got the ranges wrong.  Its
7 and 14.  I live on a hill and my wife did find a hot spot at
the huge Ala Moana center and we carried on a conversation for
a few minutes then quit.  Thats over 10 miles from home.
                                Joe

Joe says again.   I did call the FCC before useing them. She
specifically stated the chnls 1-7 required the $75 dollar license!!!!
The free Chnl I was useing was chnl 12.   The ranges you quoted
are not same as the specs.   Free chnls range 7 miles. FCC licensed
chnls are double that 14 miles. I was able to get thru to the wife
on chnl 12 which is a free chnl although spotty. She had to roam
around on 3rd deck of the shopping center till found a spot and
we proceeded loud and clear long as she remained there.   I live
on a Hill and can see the entire coast of leeward Oahu from
Diamond Head to Barbers Pt. Thats why I was able to get thru with
7 watts (as quoted in the specs). The radio itself does'nt say
anyting about GMRS but does mention chnls 1-7 require FCC license.
How the Police 911 crew managed to hear the wife I dont know.
They came on and said this the Police (she got scared and ceased
any further transmissions).   Thats was on chnl 12 as I said
a no licnse required chnl.
                        Joe

Thanks Ed,
I had'nt thoght of that but by golly your likely right on snoopers
trying to get into the act!  I'll tell the wife next time she hears
"this is the police" to reply "up yours"!!!!

Well Dunno but I have 2 of the big ones digital also displays indoor and outdoor temp. They are fed by wwvh just one island away from me on Kauai.   I have no problem it stays locked right to the second. Once in a while the Kauai WWVH goes down on both 5 and 10 mhz for hours if not days. Then the 2 clocks loose it of course. WWV on the mainland is almost inaudible out here most of the time except if conditions are good the 15mhz sig comes thru fairly well and the clocks sync on it.

Joe

Mark, please man, STFU! I don't need your approval or agreement. Just post
your drivel, and leave mine alone.

no Tom and do you have the slughest idea how stupid you looks after a
couple of of issuing orders you can't back up
>I don't need your approval or agreement.

funny I still have never claimed you did

>Just post
>your drivel, and leave mine alone.

well I try to avoid posting drivel although SC et all do make that
rough interesting to see you admit you post drivel
>

Geez folks -- there is NO license fee or requirement for an FRS Radio --
URL:
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family

There is a fee and license required for GMRS Radios -- URL:
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Why does this thread re appear over and over again ??

I suggest you determine what kind of radio you have -- perhaps it is a
FRS/GMRS Dual Service Radio

In which case read the FCC URL above.

A telephone verbal is useless. The FCC official web site is the straight
word.

  Hey thanks, Bill
 I downloaded a few of your programs and installed them on a MP3 player.
My first attempt at such a thing, it all went smoothly, I listened to the
discusion
while on the treadmill and while working the weight machines this morning, I
enjoyed the conversation. I'll be adding more soon.
  I bought a cheapy MP3 player at FYE, hold on now, list price is $29.99, it
is on sale for $19.99 and has a $10.00 rebate. So the final cost is about
$10.00!
 Works fine but it is bare bones.
                              Thanks again for the feed,
                                                      Mike

Well tnxfor that info. No way I was gonna use the FCC licensed chnls anyway. I settled on chnl 12.   works out pretty well. I had to take it back to Radio Shack, as the "SCAN" function skipped all the free (no license needed) chnls and did'nt know how to get it on a no license chnl like 12.   The girl figured out how to do it and once I got one unit set up on 12, then the other girl did a scan and it automatically locked onto unit 1 on chnls 12.   I live on a hill and was able to exceed the 7 mile limit ay about 5 miles but the wife had to go upstairs on top floor of the big shopping center to get a solid copy on me.

Joe

Simple enuff. The instructions nor the radioes show anything on them
regarding GMRS or FRS.
Joe

I just got a Yaesu YS-60 Watt meter that works as its supposed to but the pilot lights are out. With such a dark meter face (I have the Welz equavalent and its not as dark too) its hard to read.

I have a manual for the Welz which is mostly in Japanese
but it has a schematic.

I have two questions:

1. What are the pilot lights in the YS-60? I assume 12V but what current.
I also assume they are soldered in.

2.   Is it worthwhile to get a manual for the YS-60?

Thanks in advance for the help.

73 Dave K4JRB

Sorry you had to go through all this. Your experiences are very common. The FCC is to blame for permitting GMRS to share FRS frequencies and allow type acceptance of these radios. Things should have been left the same, only allowing production of 14 channel FRS radios. Big business has to have its way and force these low quality radios on the public, and then conveniently confuse the customer about licensing requirements and realistic performance.

Skilled at what? I am skilled at PSK31, MFSK, SSTV, DigitalTV, Packet,
APRS, RTTY, Throb, Olivia, Domino, and even CW. So if an operator is
skilled in most modes, then they are a skilled operator. You don't have
to be skilled in all modes to be a skilled operator.

Mr. SC... I agree with your premise that losing the code requirement
will operate to the detriment of ham radio in the long term...
I do not agree with your premise that continuous spamming of multiple
groups with garbage postings did anything except make you feel
important... Good riddance...

denny / k8do

Awww, c'mon Slow!

To use the vernacular of the left, "It was the Exam, stupid." The mode hasn't changed... hell, it hasn't changed since the 1840's! What needs to change is your attitude about how to entice folks into the Morse Code fold. Since the government stick is gone, you'll have to sell Morse Code on its merits. And here's one last hint, you'll attract more folks if you use sugar. Good Luck.

Fow Windows XP, this is already built in to the OS. If you double click on the time down in the lower right hand corner of your screen, you will get a Date and Time Properties window to open. Click on the Internet Time tab. Here you can set which time server your computer checks with to get the time. By default it is set to time.windows.com, but you can set it to most any time server. The one I use is time.nist.gov This is the same standard the WWV uses and is also used by those "Atomic Time" clocks on one frequency or another. usually the LF one.

The default check interval is, if memory serves, once a week. But you can change this by doing a simple regedit. Goto Start-->Run and type regedit in the command box. Once regedit starts, navigate to HKEY_LOCAL_MACHINE \SYSTEM\ControlSet001\Services \W32Time\TimeProviders\NtpClient, then select SpecialPollInterval. Right click on it and select Modify and change decimal value from 604800 to some other value in seconds. e.g. I have mine set to 10800 which is 3 hours. This keeps my computer running to much less than one second error and is more than enough for me :D

Hope it helps

Two main differances are the 102 has a transistor VFO (think Heath called it
a LMO) instead of a tube and the RF amp for the receiver is a differant
tube to give a little more sensitivity for 15 and 10 meters.

I think the 102 has an extra connector in the back for the transverters but not too sure about that.

Hi Alan;

I have a desktop Atomic Clock that can do UTC as well
as other time zones.

It has a data port on it so you can connect it to your
PC and pull in the time from it.

It comes with a MS-compatable program, plus I wrote one
for Linux.

I'm considering selling it (I have 2 of them) at $200.oo

If you're interested let me know and I'll give you more information on it.

73,
W6ESE - tony

Hi John;

Definitely: the SB-102 has a solid state LMO. The SB-101 a tube.

As I Recall: a change in a couple of the receiving tubes and resistor values.

Nothing Earth-shattering took place.

Still my favorite rig of all times.

73,
W6ESE - tony

May as well put in my $0.02 worth.

Last year, at a local ham swap meet, I bought a Trak Systems GPS station clock. Extremely well-built 1U rackmount package, doubles as a very stable frequency standard, and puts out an IRIG-B timecode stream as well so you can drive slave displays with it if you want.

Initial cost: $75 as a "tech special." Put a couple of hours into it for troubleshooting, and found the problem to be a bad firmware EPROM. Got the last release of firmware files from the manufacturer, made new EPROMs, and had a multi-thousand $$ GPS clock to call my own for about $120 total (counting time and parts).

There are other surplus clocks Out There. Some are more expensive than others. Datum and TrueTime (both now owned by Symmetricom), as well as Odetics (out of business) made numerous GPS-referenced clocks. Most are rack-mounted, most can be set either for GMT or local, and I've yet to see one in its class that didn't have a timecode output as well.

Prices vary from what I paid to $300 and up.

Happy hunting.

Not a problem, I hate usenet as no one shows any respect for each other.
take a look at the shit that goes in within this newsgroup

I generally use usenet or a forum when I want to find an answer, not post a
question and get a shitload of smart ass responses

I know i'm going to get flammed for saying this but I don't give a fuck

Andrew

I can't guarantee it. I've never tried it. I also came across another
42-50mhz mobile antenna.
Motorola Spectrum antenna, in very good condition as is the ASP.

I am trying to hook up 2 FM modulated devices in my car, so I am trying to find a clever way to do so. The problem I have is the reception is poor because the antenna is in the back window of the car, so I was thinking about splicing the antenna behind the radio unit to put a Y adapter, so I could add an antenna directly behind the radio unit so I could get good reception with the FM modulator. Does anyone know of any issues that could arise from this approach? Thanks

CW wasn't all that bad of a filter, but most everyone wants to get rid of
it. After it's gone, I'll just have to stick to the non phone portions of
the HF bands were you still find real hams communicating.

Hello all
I just got the new icom v8000 and download the software for the radio but my
question is does anyone know how to make the programming cable for the radio
it is the same cable for all icom radios the opc-478 cable with the 3.5mm
mini plug.

Thanks
KB3NUN

Your AM reception would go to hell for sure. Why not just put on a fender
mount antenna?

My wife has bought a handful of those gray plastic digitals
that set themselves to WWV at night; I was pleasantly surprised
to find that at least two of them can be set to UTC even though
the manual didn't mention it. I've got one in my shack now,
big thing that cost about $10 at a discount store, and shows
UTC time, plus a calendar and the ambient temp. It was a very
nice surprise to find a "UTC" setting on the time offset button!
So looking at those cheap clocks in the discount stores might
bring you the same sort of deal. Good luck!

Yes you can...sweep it with a MFJ-269 and see you need to remove about 2
inches of the rod....
Will work on 52Mhz just fine...

I am looking for a 2500 VCT HV transformer at about 1/5 amp.

It wants to fit into this space: http://schmidling.com/pwsup1.jpg

Please email jack@schmidling.com

SolderSmoke   #43 December 9, 2006
-- LP filters.
-- Feedback on feedback (in amps).
-- Return loss calc.
-- Exploring Titan.
-- London tornado.
-- Maxwell's equations.
-- TRS 80 Model 100.
-- Name-that-Noise.
-- Book: "Gonzo Gizmos."
-- MAILBAG: AK9N, N2NLY, NR5A, Ramakrishnan

Tired of listening to Led Zepplin or NPR on your
I-Pod?   Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.soldersmoke.com

All our programs are available here.

We hope you enjoy the program. Please send us
feedback.

73 from London

The 30 Steps below will help all No-Code Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way

"K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater, or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's".

Who cares if it means "best regards" and "love and kisses." Better yet,
say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about
the fact that it was off the air as soon as it's turned back on. Act as
though your entire day has been ruined because the repeater wasn't
available when you wanted to use it. Even thought you have never paid a
penny to help out with the upkeep of it.

I just wish KB9RQZ would stop pushing his gay agenda in the radio groups.
Having to listen to him butcher the english language is bad enough.

There are more hero's on ham radio, but after CW is eliminated, old hero's
won't die, they'll just fade away...  just fade away.

I do not push any gay agenda here I merely defensd myself from libel

I wish you and steve would stop pushing you anti BLT agenda here it
never belonged here but you guys insisted on making part of RRAP et al

GE OMs;
```

If anyone out there has an ORION, and is running Linux, I have written 3 programs to interface the Orion to the computer:

1. Tests communications between the Orion and the computer.

2. Allows you to control many of the Orion's functions from your keyboard.

3. Downloads the Orion's memorybank to your computer and uploads it back.

The tarball is only 200KB so most ISPs won't choke on it.

If you'd like a copy just send me e-mail: W6ESE@arrl.org

73,
W6ESE - tony

Hilarious! I am going to print these out and give them out at the next
Repeater Group meeting. (which I am forced to attend since it is also
the local RACES group meeting :-(

My wife recently passed here Tech. license and would like to have a dual
band 2mtr/440 rig in her car. Her requirements: "Will go up to 50/60
watts - Simple to operate (just turn it on, turn to (or push buttons on
mic) for the desired frequency/band, and talk..." She does want the DTMF
mic.

Can't get much simpler than that. She doesn't want to pick up the Hong
Kong police freqs or listen to aircraft landing... :)) The simpler the
better.

Any recommendations?

Thanks.

John

Well, I have seen gps units interfaced to a mcpu and lcd display that shows gps info, which can also be time in any format you want.. 2 displays whether lcd or led can be set up from the same mcpu "Basic Stamp". It is very do-able and should be low cost "under $100" for sure... i can easily do it with what I have in the shack... I also sold one of those cell-site reference gps-time units for a bunch of $$$ that I only picked up for $55 bucks a few years ago...It would of been the best thing for a shack time reference unit..

I heard that too.  Some nickel ham came in on the frequency with his lid
operating habits and pissed them off. What else were 20 wpm Extras to do
but put that little turd in his proper place, and why you listening to the
extra portions of the bands anyway.  Go play with your model Choo-Choo
trains.

I bought 2 of these tiny little FRS radioes so could keep in touch
with wife when she takes her daily walks.   I called the FCC
and asked them if any kind of license is required to use thses.
They said certain chnls do require FCC license which costs $75 for
a 1 year period. Chnls 1 thru 7 need this license also the
higher chnls I believe was 16 to 20 also require FCC license.
The others do not require any license or ID when used.
So I set both hers and mine to chnl 12 (frs free useage chnl).
These free chnls per docs have a range of up to 7 miles. The
FCC licensed chnls with same unit have a range up to 14 miles.
When my wife was trying to reach me from a shopping center about
10 miles away she did find a spot that worked. But next time
we tried I Could'nt hear her well only a sylable or 2.
She says after she tried 4 or 5 times, some one came up and
said this is the "POLICE" do you need help!!! How in the heck
does FCC get into the picture or better yet how does the FCC
even monitor these FRS chnls. I thought they only monitor 911.

Joe

G'day Ed,

The general consensus is that it did indeed come from an MSF5000, I
started a thread over at batlabs just prior to posting to these groups,
which has paid off somewhat
(see: http://batboard.batlabs.com/viewtopic.php?t=63653&unwatch=topic)
but now of course there is also some conflicting info in the replies...
info on Motorola gear can be hard to find!

I'll play it safe and keep it below 3W until I get definite confirmation
of the specs being different. Cheers

You might want to learn more about interpreting Usenet headers before
trying and failing to flame in a successful manner. Good luck with
that.

It's a radio related group. Some who subscribe to ARS do not subscribe to
other related groups and vic-versa.

> I'd suggest joining www.batlabs.com and ask on there if you want to know

> technical specs, whilst there are some people in this newsgroup who

Well, that is Usenet - uncensored and therefore you get the full spectrum
of human behaviour. I have no problem with that to be honest, MUCH more
preferable than censorship or 'moderation'.

Thanks for your suggestion re: batlabs, I did post a question there on
this matter prior to posting to these groups. I have received a few good
replies, but still seeking those elusive specifications.

Cheers

> Why bother power amplifier related postings in a CB Radio group then ?

Just to piss you off, Warren.

> state exactly what your using it for and post in the appropiare group.

No. I'm just looking for the specs. That was my query.

Can you define what in your view is an "appropiare" group?
IF you bothered to check the headers, you will see that the OP was
sent to: aus.radio.amateur.misc, aus.radio.cb, aus.radio.scanner,
rec.radio.amateur.equipment

If you believe you know of more "appropiare" groups, or just wish to
drop all pretence and continue developing this into an argument, please
enlighten us all, cheers.

Yeah, that is what scares me! :-) I am calling Icom first thing tomorrow
(Monday). I know it was still available up to a couple of year's ago (from
one of the posts on Yahoo Groups). If they do have them, and they're not
too expensive, I am going to order a couple of them. I actually have
located the relay on the Antenna Switch Unit already. I have a part # too.
So, if I can just get my hands on it! :-)

>

Excellent advice. I would add: fuse both hot & ground for good measure at the battery ends of the connections. You could also loop the power cord a couple of times and put a ferrite bead on the power leads.

Always run heavier wire than you think you'll need. It reduces loss and someday you might want to put out more wattage.

If it's a temporary set-up, use one of those gel-cell booster batteried to power your radio.

73s!

You seem to be the one pushing for an argument, I just can't see why you would bother posting in CB and Scanner groups, have look here, http://www.eserviceinfo.com/ there is a lot of Motorola stuff there,

Cheers,

Warren

Hi...

With all due respect, don't even think about fusing ground.

Take care.

Ken

Mark,

Never really contemplated putting my hands on tuff-to-get specific
replacement components before. Hope they have one for you.

Gary

Good idea. I worked on Motorola, etc, for the past 35 years, up to and including MSF5000 UHF like you have.   Best I can recollect, never had an PA that took more than 1 or 2 watts drive.....   I could be wrong, maybe.... its been a couple years.

Ed

Thanks for the link Warren, will check it out.

Hello Jasco , I'm going to do something I don't do very often and that is apologise for jumping to conclusions, I must admit when I read your original posting I thought, here we go again, some UHf CBer wanting info on a very high powered Amp, so he can stomp on every one else, for that I do apologise, in my role as an emergency monitor I get quite a few of the power heads deliberately interfering with the emergency repeaters which I monitor daily, I have even had dead set deliberate interference during actual emergency calls and whilst in contact with the Police Comms Centre, as in, microphone in one hand and the phone in the other, the Police couldn't believe what they heard, so I tend to get a bit touchy when it comes to very high power on UHf CB.

now back to the Amp, I see on the circuit board there is JAS marked in several places, I'm wondering if this is the manufactures identification, if so you might get some info from this mob,

Jas Commerical Printers
Products : Printed circuit boards
Address : 38, Bombay Talkies Compound,, Somwari Bazar, N. B. Road, Malad West,,Mumbai-400064.Maharashtra.
Send : On-Line Trade Inquiry
http://www.easy2source.com/directoryinquiry.asp?Supplier_Id=9882&Cat_id=0&Lent=3

I ran a search on the net and came up with that mob, with a bit of luck they may be the manufactures and should have the info you require, wether the buggers will give the info is another thing , once again sorry for pissing you off,

Cheers,

Warren

Jasco,
Maybe here, more info on MSF5000 if you already haven't got this link ,
http://www.repeater-builder.com/motorola/msf/msf-tour.html .

The following info has nothing to do with Motorola , but I recently purchased a Philips 828 back end (25 Watt PA from 828 radio) which has been modded so as to run a hand held 2 Mtr , there was no info available with it regarding input power, and me being a silly bugger didn't think to ask the bloke I bought it from :-) (Hamfest), so at first I set the h/h to 5 W max, the amp output was 25W, then I set the radio to low power, 0.5 W , the output was then 20 W, so I came to the conclusion to run it at low power 0.5 W, as that would most probably be the safe input power, 5 W input only raised the output by around 5 W not worth potentially blowing the driver or something major, unless of course the driver had been changed to a more robust type ?, in your case, maybe try at 1W then say 3W and see what the output difference is , if it's only 5 or 10 W on higher input power of 3 W its probably safe to run it at 1 W input,

Cheers,

Warren

You are correct , I have made the conversion on several 828 PA with a
resistive network , latest is an 828 lowband vhf on 6 ,eters with 1 watt
in give 24 watts out , actual drive is about .55 watts via the resisters .

Hello atec77, thanks for the verification, much appreciated, I really should have thought to ask the fellow I bought it from at the Gold Coast Hamfest, but it didn't occur to me at the time, I really went down to buy some N-Connectors as they have had them before, mixed types secondhand in a plastic bag for around $15 , wouldn't you know it, there wasn't any there haha, ah well, ya get that :-) ,

Cheers,

Warren

Great! Now comes the interminably long thread where everyone argues
this Old Rule once again -- without anyone changing their mind -- and
with each post starting "With all due respect ..." containing little.

plonk the thread

Fusing the ground is recommended and required to do it properly on a
GM. If the vehicle loses it's body or engine ground strap connection
for any reason (like corrosion for one) the starter or alternator or
body/lights, etc. can use the radio as a ground. This usually lets the
smoke out of the unit big time.

http://service.gm.com/techlineinfo/radio.html

I have installed hundreds of transmitters in one contract I had and when
they came back in for repairs over the years, on about 98% of power
short issues either vehicle related or transmitter system related had
the negative fuse blown before the positive one. There were lots of
cases of blown fuses due to ratty vehicle grounds also.

Well, ICOM had the RL201 part. She said they only show using 6 per year. :-) Must be a rare failure. They stock lots of the RL13's, though. Go figure. FWIW, they were prompt to get to me and get me squared away. Very pleasant and refreshing.

I have a Sunair HF receiver......GSR920 that I would love to restore;
problem is there is a small plug-in board at the top with two
fuses...some of the parts are burnt and I am unable to see the
values....CAN SOMEONE HELP WITH INFO. ABOUT PARTS, SCHEMATIC OR ONE
THAT IS FOR SALE.? Thanks.

Hi SC,

Yup, I got my tech ticket a few months ago, and I'm now working on learning code and studying for the general ticket. I hope maybe January or February, but not until I can get my ham nook setup in the garage plus move my radio from the car to the garage so I can actually focus on the radio :) It's hard learning how to ragchew while on the interstate. hehe

I do have a C64 on the way, and that plus what I have now should be enough to get me going. Too much fun!

Take care,

Alex

Actually, now that I think about it, your question would best be posted on the moderated Yahoo group for professionals in the Land Mobile Radio industry..... LMR. http://finance.groups.yahoo.com/group/LMR/

You WILL get a decent and accurate answer to your question there.

Newsgroups:
aus.radio.amateur.misc,aus.radio.cb,aus.radio.scanner,rec.radio.amateur.equipment

Hmm...

You see, I bet, and this is just a guess mind you, that the part of the
headers that solicited a comment was:

"Newsgroups:
aus.radio.amateur.misc,aus.radio.cb,aus.radio.scanner,rec.radio.amateur.equipment"

And in particular:

"aus.radio.cb"

Seeing as most people posting in this group about high powered UHF gear are actually referring to high powered UHF CB equipment.....

The fact that you posted no indication that you were seeking info for
Amateur operation but did refer to the frequency range being up to 480MHz,
again within the scope of UHF CB, probably only strengthened that fear...

But that's just my opinion, after all I'm still learning to read Usenet
headers...

I'm totally new to satellite. I may be getting a FT 8900 for XMAS (I
hope)...

Anyone care to share their experience with this rig and satellite (or
anything, really)

Thanks,

John

hi alex,

I agree. no need for latest and greatest (and most expensiveist)

check out ibm site below, all these pc and laptops are just off ibm
lease,
most under three years old with the win o/s !!

built in sound, usb, network interface and these were not made in china
since
they were made here in north carolina by ibm before they sold that part
off to lenovo.

many under $ 250-300 with free shipping ups, you just pay sales tax.

we have five of them here at home for what I would have paid for a new
pc.

I have for sale a Radio Shack HTX-202 2 meter HT in the original box with
all accessories that
came in the box from the factory. This HT is practically brand new. It was
used a few times
and stored for several years. The memory battery had gone down, so I put in
a new internal battery and supplied some AA batteries in the AA battery
case(included) and it looks and works like new.
Price is $75. Thanks, Charlie Hugg, K5MBX

FS: An Atlas 210X. This transceiver came from an estate. I did not get a manual or mic or power cord. I made a power cord to test the radio. In receive I hear some low level static coming
out of the receiver, but I was not able to hear any signals. I did not try it in transmit. The transceiver looks almost new, but I think it has set up for a long time, so it may need some of the capacitors changed.
I will take $95 plus shipping form 79602. I can send digital pictures.
Thanks,
Charlie Hugg, K5MBX

Well, I have a '99 TJ with a 40 watt police radio wired from the battery.

Noooo problems in 2 years. Automatic, air, GPS etc also.

When I transmit the GPS loses it's location however.

I have been looking for an "Atomic" clock which can be set to UTC time
for the shack.  Since the update feature only works in North America,
most of them can only be set to the local time zones.  The couple of
sales people I talked to didn't even understand the question.  Any
first hand  recommendations?  (I have already looked at eHam.)

Hi Alan. look up LA Crosse on the web. i got mine a couple years back
from Universal in Ohio. best price at that time. also my favorite
shortwave shop. and, for your computer, google -alpha clock-. great
little
free program, small foot print.

Father Michael.

Sam's Club sells a digital "atomic" clock by SkyScan for less than $20.  It has a
2" LCD time (12/24 hr) display and below it a 1"
calendar and temperature display.
I have two in my shack, one for UTC and the other for Central time.

Hi all,
I've seached all the web but didn't found this information; long ago
this receiver was produced with full coverage 150 - 30000 kHz and
reduced versions like in Germany, whith coverage li�mited to 26100 kHz
(it didn't had the external antenna plug, too.

Does anyone here knows how to fix it?

Many thanks and best regards.

You can also get UTC time info from a GPS unit that has a data port..
UTC time info can also be pulled off the Internet from any time standard site...

I have done all 3, and find that a GPS unit with an external antenna is easy to
set up, and going the Internet route is free...

Father Mike, Glenn, and Robert,

Thanks for the solid information and sources!

BTW, I actually do have a GPS clock for my computer. It works great, but I wanted something which I could keep in the shack which didn't require the computer to be up. My ancient Heathkit digital clock died after 20+ years, and I thought I would replace it, and opt for something I didn't have to hack with WWV every time the power failed.

Do you ever post anything positive?

Your posts aren't worth posting to the five boards you are boring to death.

I like CW so don't throw any of your nonsense my direction.

While I'm at it, it's not very smart to post a message responding to someone
without quoting them.

Hello,

I have an Icom IC-765. Recently, after we moved, I setup a random longwire antenna up outside and coupled it and ground to a length of 213/U and attached it to the SO-239 port on the back of the 765. I got absolutely NO receive signal/sensitivity whatsoever. Even on 10 and 15 mHz. I knew this could not be right. I checked the coax and PL-259 for a short - no problems there. I attached the antenna to another receiver and it was definitely pulling in signal. So, I then rigged an RCA phono plug and attached the coax center lead to the Receive Only Antenna jack just below the SO-239 and the receive signal shot to a full quieting WWV signal on both 10 and 15 mHz!!

So, clearly something has happened to the antenna path from the SO-239 inward. I popped the top and could see no visible solder breaks in and around the SO-239 backside. I suspect that the problem is occurring somewhere in the antenna tuner (well, maybe) as I think I understand that the receive only antenna jack bypasses the antenna tuner.

Has anyone experienced this before? is it fixable by modest mortals? It is a pain (and $) to ship the unit to Icom, so, I was hoping someone here might suggest some possible things to try first.

Thanks!

Mark Bailey, N4XHX

Sounds like a bad idea. Instead of "Slow Code", you will be "Slow
Baud".

Hi Alex, You sound like a brand new no-code Tech. Welcome to ham radio.

All those computers you mentioned will work fine, but if you really want
to do any serious computer work you're going to want to invest in a Vic
20, or a TI-99, or a Commodore 64. Power users swear by'em.

SC

Yes unfortunately and an awful lot of them too.

They all hate the CW requirement and want ham radio to get dumbed down
more, but if I had to single just one of them out for a good slapping, I'd
probably say it's Markie that needs it the most.

Now if Markie learned cw to 13 or 20 wpm, I'd congratulate him
and say, "Welcome to Ham radio Markie."

CB'ers don't normally go quality. Got any nickel plated crimp-ons from Radio
Shack for them?

Mark, one quick thought here. When you contact an antenna to the
so-239, you need to have the 'rcv ant out' jumpered to the 'ant in'
phono plug to bring sigs into the reciever. Good luck.

Gary

Even with those the CBers won't use a crimping tool. Too expensive. They
just squeeze the crap out of the ends with greasy pliers.

Well, very glad you mentioned that as I had forgotten that I had removed the
jumper during the move. I grabbed it, but, still no change! :-(So, it
looks like the issue will prove more problematic. Icom had a KB item
#5BBA49629A that talked about replacing Tuner Relay Unit relay RL13
(LY2-0-DC12V). I wonder if there is any way to determine that this might be
the culprit without dismantling the Tuner Unit (sort of a pain it
appears)???

I second that! The VIC-20 is awesome (and easy to write machine
language programs for it). My first ham use for the VIC-20 was a CW
keyer program. I still have two VIC-20s and a C-64...

Yes, forgot about the SDK-85.  Used that in tech school way back in
1981.  That was a smoking little bare-bones computer system...

Any IBM PS/2 model would be perfect.  They can be had for next to
nothing and are well-nigh indestructible.

With a Yaesu VX-5 powered from a Radio Shack car cord attached to the
console cigar lighter socket, I get rapidly repeating noise likened by
others to spark plug noise; but, no spark plugs on a diesel. Removing
the card cord and transmitting on battery eliminates the problem.

I'm about to switch from the VX-5 HT to a Kenwood TM-V7A; how may I
avoid this problem when installing the mobile transceiver.

Thank you in advance for your on-topic suggestions.

73s & best regards,

K7AAY

Fuel injectors are the most likely source of the noise.

First, use a direct connection to the battery terminals. Second, twist the connecting wires 2 or 3 twists per foot from the battery to your radio. Third, get a GOOD chassis ground connection for the radio.

If noise persists talk with the CRD service techs regarding slightly slowing down the rise time of the fuel injectors or adding a suppression diode across the fuel injector coils [it is unlikely you will get any support in this area, but worth a try]

If you contact DC, they might send you the booklet on installing a transmitter into the vehicle. They get very specific on where the power and grounds can be run as well as the antenna wire.

On GM's for instance, you have to have a 10 ga. dedicated fused power and ground line to the battery run far away from any vehicle harnesses to avoid voiding the vehicle warranty. Transmitters can interfere with things like the ABS and transmission modules, like some TJ's will go into neutral when the transmitter is keyed up, and any other electronic part.

Here is a link to GM's instructions, I haven't found any online for Jeeps:
http://service.gm.com/techlineinfo/radio.html

Gary,

FWIW, I found a PDF of the Service Manual for 765 and a Yahoo Group that had some good threads on this very problem. Seems likely that my problem is a failed RL201 relay on the Antenna Switch Unit. I was able to easily get the Tuner Unit out (after finding those threads) and pull the Tuner Unit with RL13 out of the loop and found that the relay RL201 which switches the tuner out on Receive worked on one side and not the other.

So, hopefully replacing that relay will do the trick!

FYI

Mark

<snip>

Thank you for your on-topic reply!

I do have the equivalent for a 2006 Charger Police Edition, which may
be downloaded from the very last link at http://www.503bartley.com and
will look for a similar "outfitter's guide" for the Liberty.

Mark

Tnx for the update. That's good news; sounds like the fix may not be
too painful/scary. I've really enjoyed my '765 over the years and given
the prices of most new rigs, will continue to do so! I've been out of
hf for a time but am stringing a high dipole this week. Looking forward
to bringing this 765 back to life. See you out there..

Gary

Trick may be actually FINDING the relay, if it's one of those proprietary
Icom goodies. I had to advertise for a used stepper relay for my 720A, since
Icom no longer carries any parts for the 720A.

The 239 sucks donkey dick. Real equipment tends to have BNC or N
connectors and has for thirty or forty years.

Mitch -

So if they are for sale, what is the price?
If you are asking for "best offer", then it is an auction.

Bill

G'day,

Looking for specs on this amplifier:

http://img100.imageshack.us/my.php?image=pa2modhi7.jpg
http://img484.imageshack.us/my.php?image=pa1modzp8.jpg

Don't know much at this stage, apart from 4Watts drive (@ 430-480MHz)=
approx. 150W output, draws well over 30A from my poor struggling power
supply. I'm not game to up the drive any further until I know the specs!

Basically any specs or any info at all would be great, thanks in advance.

Cheers,

```

Let's take a wild guess here, you want to use it on the UHf Chook Band to talk into the 5 w output repeaters, if that's the case, and I do hope I'm wrong, you'd be better off with a decent antenna system,

Cheers,

Warren

WRONG, I plan to cause havoc on the remaining analog police repeaters-
ya idiot. There's more to the UHF band than CB radio you know.

LOL, quite.

Amazing isn't it - cannot discuss power amplifiers in these
Aussie groups without the usual knee-jerk assumptions, irrespective of
being perfectly within the law to own and use in an appropriate manner.
Apparently no Hams here use amplifiers I guess.

I own a very nice Henry thanks , not used for a while but at 400 watts
it doesn't get even beyond warm on tune when running .

Most of the chicken bandits in my area run ham equipment, commonly
Yaesus and KWM-2s.

Been a few years, but looks like a PA out of either a MSR2000 or

MSF5000 repeater. In any case, I'd say you were overdriving it with 4 watts, as indicated by the 150 watts out. Its probably a 100 or 110 watt amplifer.   I believe that most Motorola exciters for such amplifiers put out either 1 watt or possibly 2 watts.

Ed   K7AAT

Well don't forget to wear a set of lead lined underpants, ya know what
excess high frequency does to the male reproductive organs :-)

Why bother  power amplifier related postings in a CB Radio group then ?
state exactly what your using it for and post in the appropiare group.

YOur best bet would be to get the ARRL CDs for QST magazine; get the
one for the 1970s and the one for the 1980s, and browse for articles
on your computers. But as the other guy said, software would be
awfully hard to find, unless you could find some old programs you
could type out yourself.

Best bet would be to simply get a cheapo more or less modern PC with a
good sound card; some of the newer digital modes are pretty amazing.

That's exactly what I want, except the price!  $849 versus the sub-$200 ones
that are on sale everywhere.  Hopefully, I will be able to find one of the
sub-$200 ones that will work.  Thanks for the NWAPRS name, I think I need to
read the 7000+ messages on their yahoo group.

Do Like I did, Put SC on ignore.

He obviously wants to drive everyone from Ham Radio. He has a Bile taste in his mouth from a bad experiance so he now wishes everyone to have a bad experiance. He will not rest till he drives everyone from Ham Radio. So I ignore him as he no longer provides value for my reading time.

Its the old Crusty Crumudgeons like him that drive the new people away.

Rick Scott W7PSK

I need a GPS that was a HARDWARE NMEA-0183 interface to put into my car so I can run APRS (Automatic Position Reporting System). The books say MOST of the GPSes made have this feature, but it is such an obscure thing that none of the GPSes I've looked at mention it at all (on the box or on the website), and I can't really open up the boxes to read the manual. Some of them mention they use the NMEA-0183 protocol, but then say they transmit the protocol over Bluetooth or USB. I need a GPS that has the NMEA-0183 hardware interface using a serial port.   I know I can get a cheap Garmin eTrex (about $99) that has it, but I'd really like to get one of the newer

automotive-style GPSes that are on sale everywhere. Anyone know of a
website that lists which GPSes have NMEA-0183 serial ports or which
of the automotive-style ones have it?

I used to use my color computer for an Antenna rotor controller. The
joystick port took feed back from the rotator to tell which way it was
pointing and I had built a relay board that plugged into the expansion
bus. These were cool little computers to play around with and you could

find them in yard sells for nearly nothing. At one time I had 8 of them
all at once and probably went through about 15 of them. I remember
getting an alternate OS for it and running pascal. I think the oprating
system was called OS9???.
They were a blast, think I still have a couple in the attic. Also had
an Apple II+. Then someone gave me a whole bunch of Apple II clones,
must have been 15 or 20 of them. Most didnt work when I got them but I
was able to get all but 3 or 4 going. They were all fun to play with
but wouldnt be my choice for a ham shack computer. The color computer
did have one thing nice going for it though. It seemed to be fairly
tolerant of RF in the shack. I cant say this for a lot of the other
computers especially the appales.

Welcome to aus.radio.scanner, please feel free to ask any other questions that are not related to the topic of the newsgroup.

I'd suggest joining www.batlabs.com and ask on there if you want to know technical specs, whilst there are some people in this newsgroup who actually know what they are talking about in relation to the technical side of Radios. I am not one and there are a large portion of people who response with smart ass remarks

Andrew

They and Kenwood had displays at the recent TAPR-DCC. The Kenwood rep mentioned that they, unlike any of the other major GPS manufacturers, are willing to work with Kenwood on tweaks that make them even more APRS friendly. As a retired pilot, I got a chuckle out of one of the display formats which mimicked an aircraft Horizontal Situation Indicator, HSI. I gather they are primarily a European avionics firm looking to expand and move into the consumer market, which may account for some of the price.

I find the Energizer 2500mah double A batteries have major problem that causes them not to hold a charge. When I require the use of these batteries I find they are dead after only a few weeks of shelf life. The Energizer 2100mah cells are great with no problems what so ever and they have an outstanding shelf life. When I called Energizer to discuss the problem with the 2500mah, they deny any problems with these batteries and inform me the problem is my charger. I have use 3 different charges and the problem remains. I recommend no one purchase the Energizer 2500 mah batteries due to their failure to hold a charge. I will never purchase Energizer batteries again because the Energizer Company fails to support the customer. Has anyone else have this problem?

What is interesting is for every post SC makes, you whining crybabies
make 10!

As for driving people away, Ham Radio needs more QUALITY not QUANTITY!

I use 2500 ma. I have several sets. They work fine for me. Yes, you cannot have them sit around. NiMh cells do have a self-discharge. The conditions you mention seem perfectly normal for nimh cells.

I don't have direct experience with those specific models. However, I have read (and noticed myself) that NiMH cells have a much greater self-discharge rate than NiCD cells do. One source states that typical NiCd batteries tend to self-discharge by around 10% per month, that typical NiMH batteries are up in the 25%-per-month range, and that there is a tradeoff between NiMH self-discharge rate and total battery capacity. Self-discharge can be reduced, it seems, by selecting the hydride material to improve hydrogen bonding, but this typically reduces the battery capacity.

It seems likely to me, based on this reading and on what you report, that the 2100 and 2100 mAH Energizer batteries may have been designed and optimized for two different sorts of use strategy. The 2100s may use a hydride with stronger hydrogen bonding, which would reduce self-discharge and give a long shelf/storage life. The 2500s sound as if they use a weaker-binding hydride, optimizing for the greatest amount of storage capacity when freshly charged, but with a more rapid self-discharge.

I've heard similar tales from a guy who makes extensive use of battery-powered electric hand tools. In his application (occasional use) he strongly prefers NiCd batteries, since he can charge them up and depend on the tool still working in a few months. The NiMH batteries seem to be preferred by people who use their tools constantly, and need recharge them every few days anyhow - the faster self-discharge simply doesn't matter for these folks and the greater battery capacity is a win.

Sounds like trickle charger, charging at a few milliamps higher than the
shelf discharge rate would be a good DIY project!

Regards,
JS

May have something to do with the fact that you posted into a CB
newsgroup????????????

i didn't save any links but in the past surfing/googling at college
web sites and ftp site found lots of software for those legacy
computers because they just never deleted the stuff so it's mostly
still up there   if you can google the right string   or find some of
the more famous old ftp sites that slip my mind   if you run 'fetch' on
the newest mac it might even be in the defaults

So what do you have. If you have an AZDEN PCS9000 or even the
mike coord with the 12 pin mike connector cord I would like one
of those.

Yep. It was OS9. I had the Radio Shack Color Computers at one time and
adored them. Now they wouldn't even be able to handle the simplest things I
use a computer for.

You think this is bad, you ain't seen bad. Just wait until the Lids take
over HF after CW is eliminated, then you'll be sorry.

That is, You'll be sorry unless you like what CB sounds like.

It's the new people that don't want learn or be skilled at anything that
will turn ham radio into CB and drive good hams away.

You'd probably all piss and moan like you do about CW, if the FCC made
that a test element too. You all just want handouts.

> weren't offsetting the cost.

The RS-12-903 is discontinued according to this reviewer:
http://www.geocities.com/rbrucecarter/12_603.htm.
and the GE SuperRadio 3 is an underperfomer according to this one:
http://www.dobe.com/wts/funk/GESRIIIreview.html, but still available as
a Thomson Multimedia product from Amazon.com.

A high-value for money radio for MW, SW, and VHF-FM is the Kaito KA-1103, or the same radio direct from China via eBay, the Degen DE-1103. Highly sensitive, with good selectivity, digital display and tuning (oodles of memories) and capable of SSB/CW reception. User group at http://groups.yahoo.com/group/de1103/ . Many user reviews at http://www.eham.net/reviews/detail/5071 with a 4.7/5 average rating (that's a value rating not a performance rating). The Eton E5 is similar electronically (same factory) but with a better user interface; its price is in the range of the Sony 7600GR but latter has synchronous AM detector for reduced distortion on fading signals - reviews http://www.eham.net/reviews/detail/1534.

Tom

Some ISPs will not allow attached files to be posted to any NG, but they=20
may allow attached files to be posted on one or more of the binary=20
newsgroups (try a search on your ISP for binary NGs). One ISP I had long=20
ago would allow attached files to any post on any NG, but the ISP I have=20
now will return an error message.

Also, some newsreaders can't handle attached files on NG posts, either.

Are you talking about any PC _sound_card?

  and Matlab as a combo. Might
> need a breadboard to adapt the signals, but if it's in range,
> it'll outrun just about anything for the money.

A PC _sound_card? Meant for _audio_ frequency ranges? Like single diget Hz
to 20-30 kHz? You think I'd rather have that than a decent DC to RF (X
mHz) oscilloscope 10 v/div down to 1-10 mv/div sensitivity? Time base
seconds/div to microseconds/div or less? And, can measure DC. Maybe if
you want to do some FFT or other DSP on an audio signal you can have the
soundcard. I'll pick the dedicated gear with specs that fit the ap.

> You're assuming you can trust the test equipment. Sometimes,
> you can't....

You mean you don't need to _assume_ the soundcard is working or you don't
need to worry about sw bugs or invalid process or tollerances or other
spec-dependent limitations? So, if the computer says "X" then it is
absolutely true, valid, straight from the horses mouth? No ands, ifs, or
buts? Do you know what the term "parasitic" means as it applies to chips?

Hi,
Does anyone have any type of experience of the (I think it's called)
Pyramid Antenna?
It's a sort of folded dipole with each leg one sixth of the total length
(total length is one wave length).
See picture here http://www.mypix.se/ShowFriend.asp?AID=JPJMIOPPLQG
Thinking about on like this for 80m placed on the roof.

73's
Hans - SM�IMJ

> Are you talking about any PC _sound_card?

The fact that you even ask that shows how little you know about them.
However some like the Lynx compare pretty well to an AP test set within
their designed range, for a LOT less money.

> A PC _sound_card? Meant for _audio_ frequency ranges?

Yes, amazing isn't it that is exactly what audio people want to measure, but
try <1Hz to > 90kHz for some sound cards, with <0.001% N+D.

>You think I'd rather have that than a decent DC to RF (X
> mHz) oscilloscope 10 v/div down to 1-10 mv/div sensitivity?

Shit just about any sound card can do that voltage range with a 20 cent
resistive divider. Shame you didn't mention the real problem, if you want a
high input impedance you need a high quality buffer amp. Of course those
simply measuring audio gear don't need it.

>Time base
> seconds/div to microseconds/div or less? And, can measure DC. Maybe if
> you want to do some FFT or other DSP on an audio signal you can have the
> soundcard. I'll pick the dedicated gear with specs that fit the ap.

Good for you, especially if your application is not audio. Funny though how
most dedicated test gear is connected to a PC data aquisition system these
days, at least in most metrology labs. The ability to make repeated
measurements unattended, with data manipulation, analysis and presentation
is something not many labs would be without anymore.

> You mean you don't need to _assume_ the soundcard is working or you don't

Calibration standards apply to ANY test gear, analog or digital, PC based or
stand alone.
Anybody with knowledge of metrology understands how to make proper
measurements, those who don't believe their test gear's badge is all the
calibration that's necessary :-(

MrT.

Absolutely. *In this case*, the rig beat out some rather expensive
specialized test gear. We also needed several hours of captured data.

We had eight or nine scopes and three logic analyzers; the PC
complemented 'em nicely. What works depends on the test.

 I guess my 2m in the car qualifies as an appliance radio. My HF radios are
mostly all old tube type. Real radios have a warm glow. I came upon a
bargain that I couldn't pass up on a Yaesu FT-901. I'm still trying to
decide if it's too new for me. I still practice with code tapes but I ain't
getting much better but, I'm proud of my 5 wpm extra class licence.
John

Gee!  When I look at the photo I read 80 to 15 meter amplifier in the title
block on the amplifier for auction # 220051930613.

That advertises it as an amateur band amplifier.

> Are you talking about any PC _sound_card?

Let's put it this way. A lot of good audio development and test was done with equipment such as the HP 333/334. Conventional wisdom is that if you can't measure it with a 333, you can't hear it either. A 333 pretty well ran out of gas around 0.02% THD. IOW if you hooked a perfect signal source up to a 333 and nulled it carefully, that would be a good residual. The residual THD of a typical Realtek audio interface on a modern motherboard is less than that.

> and Matlab as a combo. Might
>> need a breadboard to adapt the signals, but if it's in
>> range, it'll outrun just about anything for the money.

All you need is a a modern PC and a freeware audio testing program - RMA55.

> A PC _sound_card? Meant for _audio_ frequency ranges?

Unh huh.

> Like single diget Hz to 20-30 kHz?

Well up to 20 KHz or so.

> You think I'd rather
> have that than a decent DC to RF (X mHz) oscilloscope 10
> v/div down to 1-10 mv/div sensitivity?

Try verifying the specs of a $39.95 DVD players audio outputs with a scope.

In the real world of general purpose troubleshooting and development you would ideally have both.

> And, can measure DC.

That's what voltmeters are for, chum.

> Maybe if you want to do some FFT or other DSP on an
> audio signal you can have the soundcard.

You seem to be seeing the light.

> I'll pick the dedicated gear with specs that fit the ap.

Of course.

>> You're assuming you can trust the test equipment.
>> Sometimes, you can't....

> absolutely true, valid, straight from the horses mouth?

Measurements are what they are. Their utility is always in the interpretation.

> No ands, ifs, or buts? Do you know what the term
> "parasitic" means as it applies to chips?

It means, "Where is my dual-trace scope?"

Hey Guys,

I'm a new ham radio operator, but I've been working with computers for most of my life. I'm now in the process of setting-up my first 'ham shack', and instead of going with the latest and greatest, I hope to employee several classic computers to help me along. I have quite a collection in my closet I plan on pulling out, but I'd like opinions of others on what they would use in such a situation.

First, I do want to connect my radio to the computer, and many of the technologies used by ham radio operators, like slow scan TV, packet radio, etc, can be used on most of the classic computers in some form or fashion. This I don't think I'll have a problem, no matter which systemI go with.

One of the main things I do want to do is have the computer on my home network. I don't need a web browser or even a GUI interface... the main thing I would really need is Telnet and FTP. I also want something with a word processor and spreadsheet program -- even Visicalc would be nice to use.

And finally I want something fun.. which is the entire point of this venture :) I know some older computers still have huge repositories of software online, and whether it's a game or neat utility, I'd love to setup a classic computer I can really use and have fun with while in my 'ham shack'.

Here's a list of computers I have around me now:
Tandy Color Computer 2
Tandy Color Computer 3 (128K model)
Commodore Amiga 500
Apple II (original, not PLUS)
Mac Classic

And though I don't currently own one, I'm looking at getting a Commodore 128 as well, either from a friend of possibly from ebay.

Anyway, just curious what others would choose if you had to pick a computer or even a couple of older computers to use again. Also if there's any ham operators out there with experience with older systems, I'd love some feedback!

Take care, and thanks in advance for any ideas.

Alex

  Hi Slow Code,
  I don't normally open your posts ( didn't note the sender this time) so I
don't
know if your the nicest person on usenet or a jerk. I do know that your
posts
seem to turn into arguments about personalities and disrupt the flow of
helpful
info that can pass on rec.radio.amateur.antenna.
  I think this newsgroup is dying a slow death and suspect many are leaving
because
of drivel such as yours. I know I have contemplated dropping
rec.radio.amateur.antenna
off of my list, there is just to much on the net to put up with much
garbage.

>>You can see the no-code license was a bad idea, we need to require all
```

>>hams pass a
>>code test to bring intelligence and civility back to ham radio and the

I have been listening to the hams bands for years and noted plenty of room for
intelligence and civility, I don't think no-code has added in more room.
The biggest problem I have noted is intentional interference on polite roundtable
conversation.
Hmm! That seems to be what you do, only you do it on multiple frequencies
(newsgroups) at the same time.
Mike

Thank for the comments Roger. Yes, the first thing I did was dispose of
the battery. I have only used the stock wall wart charger with the
TH-F6. I checked the output voltage of the wall wart, and it was fine.
If I hadn't tried to remove the battery, I might not have been aware
there was a problem. I put this post here, in part, to make others
aware that there might be a problem here. It might be a good idea to
remove the battery, and check it from time to time. Li batteries make
me a bit nervous, and I was concerned when I found this problem, and
thought it would be a good idea to make this post.

Thanks
Al / K1LTJ

With almost all of the ones you mention, you would probably have to buy a Multi-Mode Controller to run any of the digital modes as several of them do not have sound cards. In some cases, you would have to home brew a connection cable as I believe some of them have non-standard serial ports. Any terminal program will then suffice to run the multi-mode controller. However, Multi-Mode Controllers are rather expensive and it might be wiser to simply invest in a new computer with a sound card (which may very well cost substantially less than the multi-mode controller).

Software for computers this old is almost unobtainable even via the internet. I loved the Tandy Color Computer series (had the original, then the 2 and finally the 3). But I got rid of them when the technology moved substantially past them. Loading programs from floppies or cassettes just doesn't cut it these days (no hard drive for most of these).

Dee, N8UZE

Nope! Look at the photo of the front of the amplifier. The manufacturer clearly
states "80-15 Meters"

The seller has misrepresented the product :-)

Now! Go look at this one "160057649761"

I have acquired a Nems Clarke Field Intensity Meter and cannot located much, heck , any information on this particular model. It looks similar to the 120-E but this one is all transistorized. Technology looks to be late 60's or early 70's. Does anyone know ANYTHING about this unit? Google has let me down and I cannot locate a picture, a instruction book, or a description.

Ted Mahler

Senator Kerry's wife is NOT FRENCH!!

She is African-American [really]!!

Senator Kerry has a real problem. He is a Liberal Democrat from the Peoples Socialist Republic of Massachusetts.

Is it a broadcast model or one for lab use? Nems-Clark bought out the
RCA models and I think Potomac acquired those from there.

I am not sure how to tell. It is a portable unit (has a handle) and has a
place to put it on a tripod. Its lid folds upright and has the antenna in
it. I believe it was for going into the field and recording signal strength.

Ted

It says Extra class on your paper, but it's not a Real Extra class
license. They quit issuing those after restructuring. What you
got is a Welfare hand-out Extra.

You don't have to learn anything Fred. You can use FRS, Cell phones, and
11 meters.

The History Of The Middle Finger

Well, now......here's something I never knew before, and now that I know it, I feel compelled to send it on to my more intelligent friends in the hope that they, too, will feel edified. Isn't history more fun when you know something about it?

Before the Battle of Agincourt in 1415, the French, anticipating victory over the English, proposed to cut off the middle finger of all captured

English soldiers. Without the middle finger it would be impossible to draw the renowned English longbow and therefore they would be incapable of fighting in the future. This famous English longbow was made of the native English Yew tree, and the act of drawing the longbow was known as "plucking the yew" (or "pluck yew").

Much to the bewilderment of the French, the English won a major upset and began mocking the French by waving their middle fingers at the defeated French, saying, See, we can still pluck yew!

Since 'pluck yew' is rather difficult to say, the difficult consonant cluster at the beginning has gradually changed to a labiodentals fricative F', and thus the words often used in conjunction with the one-finger-salute!

It is also because of the pheasant feathers on the arrows used with the longbow that the symbolic gesture is known as "giving the bird."

IT IS STILL AN APPROPRIATE SALUTE TO THE FRENCH TODAY!
And yew thought yew knew every plucking thing!

We now carry the Elcom uTNT products.

They can be used with your radio and GPS as a small portable APRS
tracking station. The internal battery makes it very portable.

Dimensions 21 X 60 X 43 mm or 0.8 X 2.3 X 1.7 inch.

They also make good full function TNCs. USB connectivity is built in to
provide connection with laptops that don't have serial ports.

http://thedigitalham.com/tdhwiki/Elcom_Products

Fast Shipment

Over the past few years we've seen some great strides made in both battery capacity and current density. We've seen an extremely expensive recall due to a few failed Lithium batteries. Some of those failures were spectacular. The batteries don't usually explode with much force but the results, as I said, can be spectacular and dangerous if you are close.

This brings to mind a question.
Just how far will we be *allowed* to go with battery capacity and current density?

There are two ways of extending the charge quantity in a battery. Increasing current density, the physical size of the battery, or a combination of both. Both have some distinct drawbacks. The one of size is obvious. The drawback(s) for increased current density OTOH are not so readily apparent.

Batteries of high current density are characterized by a very low internal resistance. That means the results of shorting out a 2 AH dry cell and shorting out a 2 AH Lithium battery are quite different. Both have the same charge, or Joules of energy BUT the rate at which that energy can be taken out of the battery is much greater with the Lithium battery than the dry cell. IOW the current flow is not limited by a high internal resistance, but is extremely high due to a very low internal resistance.

A watt is one joule per second. It's also 1.5 Volts pushing 0.66 amp through 1 ohm for 1 second. A watt is also (I^2)*R so anything we do to increase the current flow will dramatically increase the power released per unit of time.

As Lithium batteries are already spectacular in this respect we really don't have a long way to go before there could be a lot of force released when a battery is shorted either internally or externally.

>
>Thanks

Fine, then you losers don't come asking us to help you fix your radio's
after you break them. We got more important ham things we can be doing
than fixing a no-code hams broken radio.

I have a TH-F6 which I have had for about 2 1/2 years. It has been very
well treated, and care has been taken to treat the battery properly. I
noticed that the battery would no longer hold a charge. I tried to
remove the battery, and it was extremely difficult. It turns out that
the battery was slightly swollen, and pressing against the HT case.
LI-ion batteries trouble me a bit. I have seen some explosions and
fires in RC aircraft using them. I wonder if anyone else has had a
similar problem with the PB-42L stock battery with the TH-F6?

Al / K1LTJ

I just looked up "lid" - a poor operator, one who does not follow proper
procedures or sends sloppy Morse code. (Not me on either count. It's a
silly insult to throw around when you don't know somebody.)

Moderator, can we rename this thread? I think "Mode Rage" sounds right.

(If it keeps going, I can claim that you're not real hams if you don't do
Amateur TV at 1.2 GHz. Then what?)

>
There is no moderator here. Mark, however, considers himself to the de-facto self-appointed Knight-In-Shining-Armor/protector/moderator who defends no-coders against the onslaught of us pro-coders. Of course it is worth noting that Mark is the only no-coder in this group.

Mark has not mastered the art of even 5wpm and stubbornly maintains that he will never do so. He posits that he should be handed a General or above license because he feels CW is outdated. This from a guy who cannot author a cohesive sentence and who, despite many freeware spell check programs, refuses to make an effort toward rendering his third grade level disjointed posts readable.

Mark continues to assert that he is trying to clean up this newsgroup (rrap) while in reality his fifty to sixty (often more) daily posts have driven many of the previous Hams away.

When Mark blundered into this newsgroup with his trash, it was the old cliche', There Went The Neighborhood.

Of course Mark will have to comment. As Slow Code has previously noted, Mark simply cannot let a post go by without crapping on it. As always, Mark will change the subject line.
Sorry, Mork. I won't read your response. I no longer read the fifty to sixty posts you change the Subject line on.

--
nor can he spell his insults correctly if he is going to attack my
spellinghis should be beyond repaorch
Mark Morgan

I would replace the battery and check your charging system (not over charging)

The purpose amateur radio is communications. Real HAMs can communicate with CW and they also speak English, Spanish, and French. Those who can only speak English are stupid, idiots, turkeys, and are only wimpy HAMs. Real HAMs are also a little narrow minded, intolerant and arrogant. If you are one of those open minded and tolerant people you are not a real HAM and you are probably a liberal, left-wing, homo-faggot.

Dean -

I have a Shure Model 450 in NOS condition (plug has not even been wired onto cord)
Uses a magnetic cartridge and has switchable impedance (Hi/Lo). Here is the Shure data sheet on it.
http://www.shure.com/stellent/groups/public/@gms_gmi_web_ug/documents/web_resource/us_pro_450_ug.pdf

that of course depend on the meaning of the prhase no coder there are
many Nocoder here that is what the fight is a bout after all

amazing how you it seems can master tha rt of CW at high (( but you
fail to prove you have this skill) but can't learn to quote correctly

indeed why own a radio at all we are told all you need is Cw skill and
the message will get through even without it

of course I see it CW skill is neede since it works without a radio
we need to QSO with the silent keys and collect that rare dx althought
how we get a QSL card form th eheaven or hel is cchalenge

I have the following for sale, not auction. All Radios are working unless stated.

2 - Uniden SPU51KT, one with battery, no antennas, one has broken ON/OFF switch

3 - EF Johnson Model 242-5876, no batteries or antennas. FCC ID # ATH2425876 - all power up and TX/RX

1 - Uniden SPU416K, no battery or antenna, works fine.

Photots of all available upon request, asking best offer for all units or consider trades.

Electronic / RF parts/Connectors

31 - PCB mount SMB jacks - gold NEW
15 - SMA Nickel PBC Mount Jacks
2500 - Diodes Inc, MPSA42B-XN TO-92 transistors
40pcs - C&K 7101 SPDT PCB Right angle toggle switches
1080 - MIL SPEC JANTX2N2369A Transistors (metal can) NEW
10 - MACOM P/N 5862-5004-10 PCB MOunt RF connectors
1 - Dynatech FSCM 50667 / Qx6-618K002 - SP6T SMA to SMA coaxial Relay NEW, 20-26VDC, DC to 26.5GHz

Best offers (MIL SPEC parts, semi-rare). I accept PAYPAL or MO. Company checks. Photos upon request. Let me know if you need more information.

Mitch

Hi,

I have purchased a number of TM8110 Radios. At present I am designing
the interface between a control unit and the Tait Radio (Serial Data)
but I cannot find the pinout and information regarding serial coms via
the 15 way auxiliary connector at the rear of the radio. Does anyone
have a pin out for this connector and any description of serial
communications ?

Thanks

Regards

David

be sure to dispose the battery they can explode w/o warning

swelling  is a danger sign

Trying to use a PC as a general purpose bench instrument is like the old race car guys that I used to hang out with. They would build a new big block Chevy and a Turbo 400 behind it every couple of seasons. They put in a dually one ton truck and pulled a trailer that would have been just about right for an old single axle B Mack around for the season. They got about five miles to the gallon under load too.

When I got older, I'd ask them why they didn't buy a real truck, you know, air brakes, Fuller Roadranger, like a used Yellow or Roadway day truck. Well, license and insurance cost too much and you needed a "chauffeurs license" to drive it. (Those pre-CDL days!)

Well okay, at least put a diesel and an Allison in the pickup, why don't you? Because we don't know how to work on them and you can't get them in the junkyard for a hundred bucks.

Eventually they got tired of building "motors" (sic) for the tow truck and not the race car and put a 3208 Cat or a turbo 4-53 and an Allison or a Clark five speed in there. They then got like ten miles to the galllon and the truck rusted out twenty years later and the engine and trans still ran.

The PC does okay as a controller or as a dedicated production test box

with a buffered, isolated interface. But it is not like a scope or gen
or analyzer that sits on the bench.

If it won't take a charge it's probably past that danger point, but
OTOH was probably close to it about the time the swelling ocurred.

Then let me scare you: the LeCroy Wavesurfer we have at work, runs on
Windows XP and has an USB connector....... ;-)

As does the HP /Agilent Infiniium. As long as you use no other
software at all it works pretty well, but QNX would have been a very
much better choice.

Is this a former Yokogawa or Iwatsu product?

Letsee Bret. If I want to have audio test equipment that will measure
spurious responses> 100 dB down,, I either buy a M-Audio AP 24192 for $179
and  2 watt 5k pot to use as an attenuator for testing power amps and the
like for about $10 more, or I pony up $4,500 - $10,000 for a used Audio
Precision rig that is a whole lot better and easier to use, but in the end
also measures spurious responses > 100 dB down.

How about renting one? Well one source offers new AP equipment for rent at
1/10 of new price *per month*, and another offers a legacy AP System One for
$650 a month.

You pays your money and you makes your choice...
